## Methodologies for Effectively Assessing Complementary and Alternative Medicine (CAM)

### Research Tools and Techniques

*Singing Dragon Finding the right criteria to use when judging Complementary and Alternative Medicine (CAM) is essential if it is to stand up to criticism from those concerned about the importance of evidence-based medicine. This edited volume highlights how CAM requires different research tools and techniques from conventional medicine, and examines effective methodologies for accurately assessing CAM. Addressing a problem which is often cited as the reason for a failure to appreciate the potential in CAM approaches to patient care, experts from a wide array of CAM modalities suggest the most effective research methodology for each particular therapy and illustrate how a lack of adherence to that methodology produces a less effective assessment. Disciplines covered include Traditional Chinese Medicine, homeopathy, herbal medicine, craniosacral therapy, qigong and yoga. Providing direction in research and the best criteria to appropriately assess each discipline, this book highlights and responds to the issues underlying research in CAM. It will be of interest to anyone involved in CAM research, in addition to CAM practitioners and students, western medical practitioners looking to include CAM in their treatments, and anyone studying research design and methodology.*

## Shaping Church Law Around the Year 1000

## The Decretum of Burchard of Worms

Routledge This study of Burchard's 'Decretum', a popular book of Catholic canon law compiled just after the year 1000, sheds new light on the development of law and theology long before the Gregorian Reform, normally considered as a watershed in the history of the Latin Church. Practical episcopal concerns and an appreciation of new scholarly methods led Burchard to be dissatisfied with the quality of contemporary jurisprudence and particularly with the teaching texts available to local bishops. Drawing upon new manuscript discoveries, the author shows how Burchard tried to create a new text that would address these problems. He carefully selected and compiled canons from earlier collections and then went on to tamper systematically with the texts he had chosen. By doing so, he created a book of church law that appeared to be based on indisputable authority, that was internally consistent and that was easy to apply through logical extrapolation to new cases. The present study thus provides a window into the development of legal and theological reasoning in the medieval West, and suggests that, thanks to the work of ambitious bishops, the flowering of law and theology began far earlier, and for different reasons, than scholars have heretofore supposed.

## Biotechnology Fundamentals Third Edition

CRC Press After successful launching of first and second editions of *Biotechnology Fundamentals*, we thought let us find out the feedbacks from our esteemed readers, faculty members, and students about their experiences and after receiving their suggestions and recommendation we thought it would be great idea to write 3rd edition of the book. Being a teacher of biotechnology, I always wanted a book which covers all aspects of biotechnology, right from basics to applied and industrial levels. In our previous editions, we have included all topics of biotechnology which are important and fundamentals for students learning. One of the important highlights of the book that it has dedicated chapter for the career aspects of biotechnology and you may agree that many students eager to know what are career prospects they have in biotechnology. There are a great number of textbooks available that deal with molecular biotechnology, microbial biotechnology, industrial biotechnology, agricultural biotechnology, medical biotechnology, or animal biotechnology independently; however, there is not a single book available that deals with all aspects of biotechnology in one book. Today the field of biotechnology is moving with lightening speed. It becomes very important to keep track of all those new information which affect the biotechnology field directly or indirectly. In this book, I have tried to include all the topics which are directly or indirectly related to fields of biotechnology. The book discusses both conventional and modern aspects of biotechnology with suitable examples and gives the impression that the field of biotechnology is there for ages with different names; you may call them plant breeding, cheese making, in vitro fertilization, alcohol fermentation is all the fruits of biotechnology. The primary aim of this book is to help the students to learn biotechnology with classical and modern approaches and take them from basic information to complex topics. There is a total of 21 chapters in this textbook covering topics ranging from an introduction to biotechnology, genes to genomics, protein to proteomics, recombinant DNA technology, microbial biotechnology, agricultural biotechnology, animal biotechnology, environmental biotechnology, medical biotechnology, nanobiotechnology, product development in biotechnology, industrial biotechnology, forensic science, regenerative medicine, biosimialars, synthetic biology, biomedical engineering, computational biology, ethics in biotechnology, careers in biotechnology, and laboratory tutorials. All chapters begin with a brief summary followed by text with suitable examples. Each chapter illustrated by simple line diagrams, pictures, and tables. Each chapter concludes with a question session, assignment, and field trip information. I have included laboratory tutorials as a separate chapter to expose the students to various laboratory techniques and laboratory protocols. This practical information would be an added advantage to the students while they learn the theoretical aspects of biotechnology.

## Law, Person, and Community

### Philosophical, Theological, and Comparative Perspectives on Canon Law

Oxford University Press *Law, Person, and Community: Philosophical, Theological, and Comparative Perspectives on Canon Law* takes up the fundamental question "What is law?" through a consideration of the interrelation of the concepts of law, person, and community. As with the concept of law described by secular legal theorists, canon law aims to set a societal order that harmonizes the interests of individuals and communities, secures peace, guarantees freedom, and establishes justice. At the same time, canon law

rests upon a traditional understanding of the spiritual end of the human person and religious nature of community. The comparison of one of the world's ancient systems of religious law with contemporary conceptions of law rooted in secular theory raises questions about the law's power to bind individuals and communities. Professor John J. Coughlin employs comparative methodology in an attempt to reveal the differing concepts of the human person reflected in both canon law and secular legal theory. Contrasting the contemporary positivistic view of law with the classical view reflected in canon law, *Law, Person, and Community* discusses the relationship between canon law, theology, and natural law. It also probes the interplay between the metaphysical and historical in the theory of law by an examination of canonical equity, papal authority, and the canon law of marriage. It juxtaposes the assumptions of canon law about church-state relations with those of the modern liberal state as exemplified by U.S. first amendment jurisprudence. No scholarly work has yet addressed this question of how the principles and substance of canon law, both past and present, relate to current issues in legal theory, such as the foundation of human rights and in particular the right of religious freedom for individuals and communities.

To meet these challenges, this book entitled *Drug Discovery and Clinical Research* has been compiled. All chapters have been written by stalwarts of the field who have their finger on the pulse of the industry. The aim of the book is to provide succinctly within one cover, an update on all aspects of this wide area. Although each of the chapter dealt here starting from drug discovery and development, clinical development, bioethics, medical devices, pharmacovigilance, data management, safety monitoring, patient recruitment, etc. are topics for full-fledged book in themselves, an effort has been made via this book to provide a bird's eye view to readers and help them to keep abreast with the latest development despite constraints of time. It is hoped that the book will contribute to the growth of readers, which should translate into drug discovery and clinical research industry's growth.
