Debates in Primary Education

Routledge This powerful text encourages both pre-service and established teachers, as well as teacher educators, to engage with contemporary debates in primary education. Promoting a critical approach, the chapters explore a wide range of key themes including the importance of values in primary education and the imperative for a curriculum which embraces the whole range of available subjects. At the same time, the chapters are underpinned by a belief that children should be at the heart of all the decisions we make and that primary education should inspire a love of learning, for life. The book aims to support practitioners to make informed judgements and feel confident to argue their point of view with deeper theoretical knowledge and understanding, thus increasing teacher agency and confidence in responding to complex educational and social dilemmas such as literacy levels and rising mental health concerns. Chapters encompass both the macro aspects of primary education and more specialised debates on key topics such as reading, mathematics, languages, early years education and the use of technology. With annotated further reading and reflective questions, this key text is essential reading for all those wanting to develop a better understanding of the issues that shape their practice including student teachers at both undergraduate and postgraduate level, practising teachers engaged in continuing professional development and teacher educators.

More recently, it has also generated great interest and controversy in related disciplines such as anthropology, biology, psychology, neuroscience and even economics. Food advertising to children

A critical evaluation of public, governmental and corporate responsibilities in Germany

Anchor Academic Publishing (aap_verlag) With increasing levels of child obesity, the food industry and its advertising techniques are ever more in the centre of public and academic discussion. While such discussion is complicated by the subjectivity of ethical understanding, the existing body of research also lacks evidence for the actual effects of child-directed advertising. In order to advance a solution in the persisting conflict, this paper critically examines public, governmental and corporate responsibilities. A reflection of theoretical and empirical research is therefore complemented by the collection of primary data - drawn from qualitative interviews with children and their parents. As means of implications for practice, the author drafts an organisational concept, namely the 'Initiative for the responsible use and creation of children's food advertising'.

Assessment of Young Children

A Collaborative Approach

Routledge In an era of standards and norms where assessment tends to minimize or dismiss individual differences and results in punitive outcomes or no action at all, Assessment of Young Children provides teachers with an approach to assessment that is in the best interest of both children and their families. Author Lisa B. Fiore explores a variety of ways to study and assess young children in their natural environments, while stressing the importance of bringing children and families into the process. This lively text helps the reader learn how to cultivate developmentally appropriate practice, create appropriate expectations, examine children's work, interact in groups, and improve their teacher behavior. Accounts of real experiences from children, families, teachers, and administrators provide on-the-ground models of assessment strategies and demonstrate how children are affected. Assessment of Young Children explores both standardized and authentic assessment, work sampling systems, and observation skills. Readers will walk away with strategies for communicating information about children and portfolio assessment, and how the use of formal and informal methods of observation, documentation, and assessment are connected to teacher and student inquiry. Assessment of Young Children encourages an assessment strategy where the child remains the focus and explores how collaboration with children, families,

and colleagues creates an image—not a diagnosis—of the child that is empowering rather than constraining. An Open Book: What and How Young Children Learn From Picture and Story Books

Frontiers Media SA Looking at and listening to picture and story books is a ubiquitous activity, frequently enjoyed by many young children and their parents. Well before children can read for themselves they are able to learn from books. Looking at and listening to books increases children's general knowledge, understanding about the world and promotes language acquisition. This collection of papers demonstrates the breadth of information pre-reading children learn from books and increases our understanding of the social and cognitive mechanisms that support this learning. Our hope is that this Research Topic/eBook will be useful for researchers as well as educational practitioners and parents who are interested in optimizing children's learning.

Recursion across Domains

Cambridge University Press Recursion and self-embedding are at the heart of our ability to formulate our thoughts, articulate our imagination and share with other human beings. Nonetheless, controversy exists over the extent to which recursion is shared across all domains of syntax. A collection of 18 studies are presented here on the central linguistic property of recursion, examining a range of constructions in over a dozen languages representing great areal, typological and genetic diversity and spanning wide latitudes. The volume expands the topic to include prepositional phrases, possessives, adjectives, and relative clauses - our many vehicles to express creative thought - to provide a critical perspective on claims about how recursion connects to broader aspects of the mind. Parallel explorations across language families, literate and non-literate societies, children and adults are investigated and constitutes a new step in the generative tradition by simultaneously focusing on formal theory, acquisition and experimentation, and ecologically-

sensitive fieldwork, and initiates a new community where these diverse experts collaborate.

Cognition

John Wiley & Sons The study of human cognitive processes provides insight into why we act or react and can help us predict future behaviors. In Cognition, authors Thomas Farmer and Margaret Matlin present an engaging and highly relatable examination of how these processes work, and how they are responsible for the way we perceive and interpret the world around us. Broad in scope without sacrificing depth of detail, this text emphasizes the link between conceptual cognitive psychology and real-world experience; case studies, current trends, and historical perspectives merge to provide a comprehensive understanding of core principles and theories. This new Tenth Edition has been updated to reflect the latest research, technology, and thinking, with more in-depth coverage of topics rising to prominence in the field's current knowledge base. Expanded explanations balance classical and contemporary approaches to specific topics, while additional experiments and an emphasis on methodology and experimental design are included to facilitate a greater appreciation of the field's rigorous research.
