### Energy Assessments for Industrial Complexes

**Bentham Science Publishers This e-book discusses methods that businesses may employ to reduce energy costs related to managing industrial buildings through environmentally sustainable methods. There are several chapters covering various aspects of energy assessments and each chapter is linked to case histories that are given in the appendix. The chapters cover energy efficient methods for managing lighting, insulation, machines, air conditioning and much more. Information needed during the assessment process is also supplemented in tables. Readers who wish to gain a better understanding of[] the many ways to reduce energy consumption can benefit from this book.**

### Advances in Manufacturing and Industrial Engineering

### Select Proceedings of ICAPIE 2019

**Springer Nature This book presents selected peer reviewed papers from the International Conference on Advanced Production and Industrial Engineering (ICAPIE 2019). It covers a wide range of topics and latest research in mechanical systems engineering, materials engineering, micro-machining, renewable energy, industrial and production engineering, and additive manufacturing. Given the range of topics discussed, this book will be useful for students and researchers primarily working in mechanical and industrial engineering, and energy technologies.**

# Industrial Steam Systems

## Fundamentals and Best Design Practices

CRC Press Develop a Complete and Thorough Understanding of Industrial Steam Systems Industrial Steam Systems: Fundamentals and Best Design Practices is a complete, concise user's guide for plant designers, operators, and other industry professionals involved with such systems. Focused on the proper safety design and setup of industrial steam systems, this text aligns essential principles with applicable regulations and codes. Incorporating design and operation guidelines from the latest available literature, it describes the industrial steam system equipment and its operation, outlines the requirements of a functioning boiler room, and explains how to design and engineer an industrial steam system properly. From Beginner to Advanced—All within a Single Volume Industrial steam systems are one of the main utility support systems used for almost all manufacturing. This text describes the design and operation of industrial steam systems in simple steps that are extremely beneficial for engineers, architects, and operators. The book help readers with the information needed for the steam systems professional engineering test and boiler operator's certificate. The text includes a sample project, executed in detail, to explain the system. It also presents relevant examples throughout the text to aid in faster learning. This author covers: Industrial steam system fundamentals and elementary information System setup and required equipment Applicable codes and regulations Equipment operation principals Best design practices for system setup, piping and instrumentation, equipment and pipe sizing, and equipment selection Execution of a sample project Industrial Steam Systems: Fundamentals and Best Design Practices presents an overview of the design, installation, and operation of industrial steam systems. Understanding the system setup, controls, and equipment, and their effect on each other enables readers to learn how to troubleshoot, maintain, and operate an industrial steam system that provides high quality steam efficiently.

## Closing the Gap

## GEF Experiences in Global Energy Efficiency

Springer Science & Business Media Energy efficiency plays and will continue to play an important role in the world to save energy and mitigate greenhouse gas (GHG) emissions. However, little is known on how much additional capital should be invested to ensure using energy efficiently as it should be, and very little is known which sub-areas, technologies, and countries shall achieve maximum greenhouse gas emissions mitigation per dollar of investment in energy efficiency worldwide. Analyzing completed and slowly moving energy efficiency projects by the Global Environment Facility during 1991-2010, *Closing the Gap: GEF Experiences in Global Energy Efficiency* evaluates impacts of multi-billion-dollar investments in the world energy efficiency. It covers the following areas: 1. Reviewing the world energy efficiency investment and disclosing the global energy efficiency gap and market barriers that cause the gap; 2. Leveraging private funds with public funds and other resources in energy efficiency investments; using these funds in tangible and intangible asset investments; 3. Investment effectiveness in dollars per metric ton of CO2 emissions mitigation in 10 energy efficiency sub-areas; 4. Major barriers causing failure and abandonments in energy efficiency investments; 5. Quantification of direct and indirect CO2 emissions mitigations inside and outside a project boundary; and 6. Classification and estimation of CO2 emissions mitigations from tangible and intangible asset investments. *Closing the Gap: GEF Experiences in Global Energy Efficiency* can serve as a handbook for policymakers, project investors and managers, and project implementation practitioners in need of benchmarks in energy efficiency project investments for decision-making. It can also be used by students, researchers and other professionals in universities and research institutions in methodology development for evaluating energy efficiency projects and programs.

## Pressure Vessel Design Manual

**Butterworth-Heinemann Pressure vessels are closed containers designed to hold gases or liquids at a pressure substantially different from the ambient pressure. They have a variety of applications in industry, including in oil refineries, nuclear reactors, vehicle airbrake reservoirs, and more. The pressure differential with such vessels is dangerous, and due to the risk of accident and fatality around their use, the design, manufacture, operation and inspection of pressure vessels is regulated by engineering authorities and guided by legal codes and standards. Pressure Vessel Design Manual is a solutions-focused guide to the many problems and technical challenges involved in the design of pressure vessels to match stringent standards and codes. It brings together otherwise scattered information and explanations into one easy-to-use resource to minimize research and take readers from problem to solution in the most direct manner possible. Covers almost all problems that a working pressure vessel designer can expect to face, with 50+ step-by-step design procedures including a wealth of equations, explanations and data Internationally recognized, widely referenced and trusted, with 20+ years of use in over 30 countries making it an accepted industry standard guide Now revised with up-to-date ASME, ASCE and API regulatory code information, and dual unit coverage for increased ease of international use**

How the Japanese Learn to Work

**Routledge Japan is regarded as a world leader in the field of education and training for improved economic performance. Yet success in Japan is often achieved by going against what is regarded as ideal practice elsewhere. This book offers the most comprehensive review available in English of the many facets of Japanese vocational education and training. Covering the system from primary education through to in job-training offered by companies, this book provides a detailed study of current practice giving equal emphasis to formal training in explicitly vocational courses, and informal training in factories, shops and offices. The authors analyse the difference between substantive 'person-changing' training and mere 'ability-labelling.' They raise important questions, such as: To what extent does the need to package skills to provide convenient qualifications distort the actual training given? How efficient is it to rely on professional trainers to certify the acquisition of skills, rather than run separate testing systems? The authors reveal how, in Japanese companies, employees are strongly motivated by pride in the successful execution of their jobs, and that much company training is carried out by colleagues.**
