## Foundations of Query Answering in Relational Data Exchange

Logos Verlag Berlin GmbH Relational data exchange is the problem of translating relational data according to a given specification. It is one of the many tasks that arise in information integration. A fundamental issue is how to answer queries that are posed against the result of the data exchange so that the answers are semantically consistent with the source data. For monotonic queries, the certain answers semantics by Fagin, Kolaitis, Miller, and Popa (2003) yields good answers. For many non-monotonic queries, however, this semantics was shown to yield counter-intuitive answers. This dissertation deals with the problem of computing the certain answers to monotonic queries on the one hand. On the other hand, it presents and compares semantics for answering non-monotonic queries, and investigates how hard it is to evaluate non-monotonic queries under these semantics.

Brown 'The point of a Pin'. van Gulik's The Chinese Maze Murders. Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the "tree" of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non-trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, coding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. And in addition to this there are such new emerging subdisciplines as "experimental mathematics", "CFD", "completely integrable systems", "chaos, synergetics and large-scale order", which are almost impossible to fit into the existing classification schemes. They draw upon widely different sections of mathematics.**

# Corporate Social Responsibility and Law in Africa

## Theories, Issues and Practices

Taking a corporate law perspective on CSR, the author combines theory and practice to explain how CSR interacts with of sustainable development and sets an agenda for effective operationalization in Africa. The book not only devises an enforcement mechanism towards embedding effective CSR and sustainable development in Africa but also addresses CSR greenwash on the continent. The author critically examines CSR practices, legal and regulatory techniques in Nigeria and South Africa in the context of contexts of international regulatory dialogues and shows how corporate socially responsible behaviour can be effectively embedded within business communities in Africa. Increasing our understanding of the theoretical, legal and regulatory frameworks supporting corporate responsibility, this book will be of interest to scholars, policy makers and practitioners in the fields of Africa law, corporate law, corporate social responsibility and African business.
