EDUCATION AND THE POLITICS OF BECOMING

Routledge *This collection examines education in the light of a politics of becoming. It takes a non-hierarchical transdisciplinary approach, challenging the macropolitics of pre-established governmental and economic agendas for education. Drawing on the philosophy of Gilles Deleuze and Felix Guattari, the contributors consider questions such as how education might engage a politics of becoming, and how education and becoming function in a society of control. Since Deleuze and Guattari contend that a society is defined by its becomings, its transformations, this collection asks how education, itself a process in becoming, may contribute "collective creations" to a society in continual flux. The chapters bring theory and praxis together, deploying power, affect, cartography, space, relationality, assemblage and multiple literacies in order to experiment with music, art, language, teacher education, curriculum and policy studies. This collection is an innovative resource, creating an encounter with the macropolitics of education, and altering teaching, learning, evaluation and curriculum. This book was originally published as a special issue of Discourse: Studies in the Cultural Politics of Education.*

THE FIRES OF OCTOBER: THE PLANNED US INVASION OF CUBA DURING THE MISSILE CRISIS OF 1962

Fonthill Media *It was the closest we ever came to unleashing the Third World War.... The image of that world was so horrible to contemplate that both sides stepped away from that precipice and opted for peace. Fires of October is the exhilarating military history of the Cuban Missile Crisis exploring in detail the strategic plans implemented by American Armed Forces as they headed towards a catastrophic nuclear collision with Cuba and the USSR. Using recently declassified material, Blaine Pardoe systematically recounts the origins of the crisis, from the Berlin Crisis of 1961 and Cuba's military metamorphosis, to the internal disorganization of the US military, which exacerbated tensions between the USA, Cuba, and the USSR. Pardoe reveals that the invasion plans were based on old intelligence, outdated maps, and misconceptions about the size, strength, and composition of the Soviet forces in Cuba; for the first time, and with harrowing results, he scrutinizes the potential fallout had the invasion gone ahead. Gripping and unnerving, Fires of October shows us just how close the world came to nuclear war.*

IT SHOULDN'T BE THIS HARD TO SERVE YOUR COUNTRY

OUR BROKEN GOVERNMENT AND THE PLIGHT OF VETERANS

PublicAffairs *The former VA secretary describes his fight to save veteran health care from partisan politics and how his efforts were ultimately derailed by a small group of unelected officials appointed by the Trump White House. Known in health care circles for his ability to turn around ailing hospitals, Dr. David Shulkin was originally brought into government by President Obama to save the beleaguered Department of Veterans Affairs. When President Trump appointed him as secretary of the VA, Shulkin was as shocked as anyone. Yet this surprise was trivial compared to what Shulkin encountered as secretary: a team of political appointees devoted to stopping anyone -- including the secretary himself -- who stood in the way of privatizing the agency and implementing their political agenda. In this uninhibited memoir, Shulkin opens up about why the government has long struggled to provide good medical care to military veterans and the plan he had to solve these problems. This is a book about the commitment we make to the men and women who risk their lives fighting for our country, how the VA was finally beginning to live up to it, and why the new administration may now be taking us in the wrong direction.*

HEINZ KOHUT AND THE PSYCHOLOGY OF THE SELF

Routledge Heinz Kohut's work represents an important departure from the Freudian tradition of psychoanalysis. A founder of the Self Psychology movement in America, he based his practice on the belief that narcissistic vulnerabilities play a significant part in the suffering that brings people for treatment. Written predominantly for a psychoanalytic audience Kohut's work is often difficult to interpret. Siegel uses examples from his own practice to show how Kohut's innovative theories can be applied to other forms of treatment.

INVITATION TO CLASSICAL ANALYSIS

American Mathematical Soc. This book gives a rigorous treatment of selected topics in classical analysis, with many applications and examples. The exposition is at the undergraduate level, building on basic principles of advanced calculus without appeal to more sophisticated techniques of complex analysis and Lebesgue integration. Among the topics covered are Fourier series and integrals, approximation theory, Stirling's formula, the gamma function, Bernoulli numbers and polynomials, the Riemann zeta function, Tauberian theorems, elliptic integrals, ramifications of the Cantor set, and a theoretical discussion of differential equations including power series solutions at regular singular points, Bessel functions, hypergeometric functions, and Sturm comparison theory. Preliminary chapters offer rapid reviews of basic principles and further background material such as infinite products and commonly applied inequalities. This book is designed for individual study but can also serve as a text for second-semester courses in advanced calculus. Each chapter concludes with an abundance of exercises. Historical notes discuss the evolution of mathematical ideas and their relevance to physical applications. Special features are capsule scientific biographies of the major players and a gallery of portraits. Although this book is designed for undergraduate students, others may find it an accessible source of information on classical topics that underlie modern developments in pure and applied mathematics.

DEVELOPING INTELLIGENT AGENT SYSTEMS

A PRACTICAL GUIDE

John Wiley & Sons Build your own intelligent agent system... Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments. Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce, to autonomous space probes. This powerful technology is not widely used, however, as developing intelligent agent software requires high levels of training and skill. The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems. With this methodology (Prometheus) developers can start agent-oriented designs and implementations easily from scratch saving valuable time and resources. Developing Intelligent Agent Systems not only answers the questions "what are agents?" and "why are they useful?" but also the crucial question: "how do I design and build intelligent agent systems?" The book covers everything a practitioner needs to know to begin to effectively use this technology - including an introduction to the notion of agents, a description of the concepts involved, and a software engineering methodology. Read on for: a practical step-by-step introduction to designing and building intelligent agent systems. a full life-cycle methodology for developing intelligent agent systems covering specification, analysis, design and implementation of agents. PDT: Prometheus Design Tool - software support for the Prometheus design process. the example of an electronic bookstore to illustrate the design process throughout the book. Electronic resources including the Prometheus Design Tool (PDT), can be found at: <http://www.cs.rmit.edu.au/agents/prometheus> This book is aimed at industrial software developers, software engineers and at advanced undergraduate students. It assumes knowledge of basic software engineering but does not require knowledge of Artificial Intelligence or of mathematics. Familiarity with Java will help in reading the examples in chapter 10.

FOR BETTER OR FOR WORSE? COLLABORATIVE COUPLES IN THE SCIENCES

Springer Science & Business Media In this volume, a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working-class and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts, to university laboratories and urban centers in Berlin, Stockholm, Geneva and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.

AMERICAN PICKERS GUIDE TO PICKING

Hachette Books A true adventure story and the go-to guide for "picking" American treasures from anyone's backyard, straight from the stars of History's American Pickers In these pages, professional treasure hunters Mike Wolfe and Frank Fritz chronicle their road trips across the American countryside in search of "rusty gold" to buy and sell among the picking world's one-of-a-kind characters. Whether you are a fan of the show or just like finding hidden riches, you will love seeing what Wolfe and Fritz dig up and enjoy meeting the devoted collectors, extreme stockpilers, and elite dealers who they encounter along the way. Wolfe and Fritz do not deal in fine antiques. Their secondhand treasures are of the down-and-dirty and sometimes even bizarre variety, from old bicycles and vintage tools, to sun-bleached cars and handmade furniture, retired carnival games and unusual taxidermy. Assisted by Danielle Colby, who helps out at Antique Archaeology, Wolfe and Fritz buy on the cheap and then sell to dealers, art directors, interior designers, or anyone looking for a little bit of authentic Americana. The three now share their secrets to finding hidden gems, offering helpful hints that will show what average Americans can do to find the treasures that await them. From American Pickers Guide to Picking: Junk is Beautiful When we knock on a door, 90 percent of the time the things we find are junk. But we don't care about the odds; a picker never turns down an opportunity, no matter where it is. We've picked pickup trucks. We've picked flat beds. We've picked dumpsters. We even picked a Mercury Sable. We're looking for the unusual, the impossible, the funky, the different, the bizarre-things we have never seen before. And we'll go anywhere we have to go to find it. No location is off-limits to a hard-core picker. And there's plenty of things to be found at antique stores, thrift and consignment shops, flea markets, estate sales, and swap meets, and a lot of the tips in this book apply to finding treasures at these joints. But that's not really the kind of picking we do anymore. We look outside the box to find our junk-a word we use almost like a term of endearment: to us: junk is beautiful.
