### **THE SCIENCE AND DESIGN OF EDUCATIONAL ASSESSMENT**

---

*National Academies Press* Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments--assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. Knowing What Students Know essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment--what students know and how well they know it--as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, Knowing What Students Know will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

## **SCIENCE TEACHING RECONSIDERED**

---

### **A HANDBOOK**

---

*National Academies Press* Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

**POSTAL TWO-WAY COMMUNICATION IN CORRESPONDENCE EDUCATION**

---

**AN EMPIRICAL INVESTIGATION**

---

A review of the research on correspondence education with emphasis on its two-way communication aspects introduces this report on a series of studies designed to shed light upon problems related to the design and delivery of correspondence instruction. A total of 1,805 adult students enrolled in regular Swedish, Norwegian, and British correspondence courses of a secondary school or vocational training type were randomly assigned to experimental groups with (1) varying "submission density" (equivalent to varying length of study units); (2) varying numbers of assignment questions (omitted questions being replaced by self-check exercises); and (3) traditional postal instruction versus computer-assisted postal instruction. Data were collected through questionnaires, final tests, and a special student register. Results in the third series of experiments showed that the computerized postal instruction was experienced as more positive by the students than the traditional one. Students receiving computer-assisted correspondence tutoring started submitting more assignments than students receiving traditional tutoring by mail. In one of the two experimental courses, they also completed their studies more fully and more rapidly. Examples of postal two-way communication, computer-generated comment letters, and additional tables are appended, and a 13-page reference list is provided.
