STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

A PATH FORWARD

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a

full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

A NEW ECOLOGY

SYSTEMS PERSPECTIVE

Elsevier **A New Ecology** presents an ecosystem theory based on the following ecosystem properties: physical openness, ontic openness, directionality, connectivity, a complex dynamic for growth and development, and a complex dynamic response to disturbances. Each of these properties is developed in detail to show that these basic and characteristic properties can be applied to explain a wide spectrum of ecological observations and conceptions. It is also shown that the properties have application for environmental management and for assessment of ecosystem health. * Demonstrates an ecosystem theory that can be applied to explain ecological observations and rules * Presents an ecosystem theory based upon a systems approach * Discusses an ecosystem theory that is based on a few basic properties that are characteristic for ecosystems

ENVIRONMENTAL POLICY PARADOX

Routledge Updated in its 6th edition, *The Environmental Policy Paradox* provides an introduction to the policy-making process in the United States with regard to air, water, land use, agriculture, energy, and waste disposal, while introducing readers to both global and international environmental issues and institutions. The text explains why some environmental ideas shape policy while others do not, and illustrates that even when the best short- and long-term solutions to environmental problems are identified, the task of implementing these solutions is often left undone or is completed too late. Readers are presented with a comprehensive history of the environmental movement paired with the most up-to-date account of environmental policy available today.

AMERICAN INDIAN ENVIRONMENTAL ETHICS

AN OJIBWA CASE STUDY

Prentice Hall J. Baud Callicott and Michael P. Nelson offer an engaging study of environmental ethics with particular emphasis on an ethics supported by the Ojibwa cultural worldview. Connecting environmental theory with diverse stories from Ojibwa Indians, Callicott and Nelson reveal the meaning and power of cultural worldviews as they inform ethical principles and practices, as they show that competing worldviews demonstrate the many ways "of cognitively organizing human experience." The authors begin with a concise treatment of environmental ethics, cultural worldviews, and the problem of cultural relativism, and integrate and evaluate rarely seen narratives of Ojibwa Indians on their relationship to the environment. *American Indian Environmental Ethics* is the seventh book in the series, *Basic Ethics in Action*, edited by Michael Boylan. This series is a major new undertaking by Prentice Hall covering several areas in applied ethics, including business ethics, environmental ethics, medical ethics, and social and political ethics.

PRINCIPLES AND PRACTICE IN SECOND LANGUAGE ACQUISITION

Pergamon The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.

ENVIRONMENT AND SOCIAL THEORY

Routledge Written in an engaging and accessible manner by one of the leading scholars in his field, Environment and Social Theory, completed revised and updated with two new chapters, is an indispensable guide to the way in which the environment and social theory relate to one another. This popular text outlines the complex interlinking of the environment, nature and social theory from ancient and pre-modern thinking to contemporary social theorizing. John Barry: examines the ways major religions such as Judaeo-Christianity have and continue to conceptualize the environment analyzes the way the non-human environment features in

Western thinking from Marx and Darwin, to Freud and Horkheimer explores the relationship between gender and the environment, postmodernism and risk society schools of thought, and the contemporary ideology of orthodox economic thinking in social theorising about the environment. How humans value, use and think about the environment, is an increasingly central and important aspect of recent social theory. It has become clear that the present generation is faced with a series of unique environmental dilemmas, largely unprecedented in human history. With summary points, illustrative examples, glossary and further reading sections this invaluable resource will benefit anyone with an interest in environmentalism, politics, sociology, geography, development studies and environmental and ecological economics.

WORKING WITH TEXT AND AROUND TEXT IN FOREIGN LANGUAGE ENVIRONMENTS

Springer This book investigates the three pivotal points of text for foreign language acquisition: reception, construction and deconstruction. In Part One, the focus is on various aspects of text reception, such as developing literacy, text interest, and perceptions of the academic register or the

assessment of spoken language in educational contexts. Part Two deals with various aspects of composing text, such as author identity, lexical constructs or collaborative web-based writing. Lastly, Part Three presents the various segmental items that constitute text, like lexical clustering, L1/L2 relationship, classroom talk as text, etc. The division corresponds with what can be viewed as a logical sequence of text-related processes reflected in formal learning and teaching environments.

ACTIVE LEARNING

CREATING EXCITEMENT IN THE CLASSROOM. 1991 ASHE-ERIC HIGHER EDUCATION REPORTS

This monograph examines the nature of active learning at the higher education level, the empirical research on its use, the common obstacles and barriers that give rise to faculty resistance, and how faculty and staff can implement active learning techniques. A preliminary section defines active learning and looks at the current climate surrounding the concept. A second section, entitled "The Modified Lecture" offers ways that teachers can incorporate active learning into their most frequently used format: the lecture. The following section on classroom discussion explains the conditions and techniques needed for the most useful type of exchange. Other ways to promote active learning are also described including: visual learning, writing in class, problem solving, computer-based instruction, cooperative learning, debates, drama, role playing, simulations, games, and peer teaching. A section on obstacles to implementing active learning techniques leads naturally to the final section, "Conclusions and Recommendations," which outlines the roles that each group within the university can play in order to encourage the implementation of active learning strategies. The text includes over 200 references and an index. (JB)
