INTERNATIONAL TAXATION OF INCOME FROM SERVICES UNDER DOUBLE TAXATION CONVENTIONS

DEVELOPMENT, PRACTICE AND POLICY

Kluwer Law International B.V. The provision of international services has increased enormously, mainly due to the precipitous growth of the digital economy. Accordingly, the interpretation and application of double taxation conventions (DTCs) to income from services has become a dominant focus in the international taxation. This multiple-award-winning book is an indispensable tool for practitioners and a major contribution to the debate about tax reform. It responds to the need for a comprehensive overview of the tax opportunities and risks relating to the provision of international services. It also offers the first in-depth analysis of the taxation of income from services vis-à-vis the multilateral instrument (MLI) resulting from the OECD's Base Erosion and Profit Shifting (BEPS) initiative. With the thorough analysis of the international taxation of income from services over the last two centuries, the author sheds new light on present tax policy debates and develops workable proposals for bringing brick-and-mortar DTCs into the digital reality. With an abundance of case studies, treaty interpretations, appraisals of policy discussions, and practical solutions, the author examines every aspect of the subject, including the following: - the Model DTCs of the OECD, the United Nations, Germany, and the United States, their similarities and differences; - relationships among the MLI, the Model DTCs, and specific DTCs; - development of the provisions dealing with services in the DTCs; - how tax authorities and courts of different countries (e.g., the United States, Germany, Brazil, India, and China) apply DTC provisions on the taxation of international services; - opportunities and risks relating to different business practices, such as the subcontracting of services provisions, the hiring-out of labour, the secondment of employees, and the engagement of contract and toll manufacturers; - practical questions about the taxation of different distribution models - from fully edged distributors to commissionaires; - challenges and proposals relating to the differentiation between various types of services under DTCs; - the permanent establishment concept; - to what extent the structure, purposes, and scope of DTCs differ from those of the General Agreement on Trade in Services (GATS); - how changes in the US Model DTC of 2016 affect international service provisions; and - proposed changes to amending the OECD and UN Model DTCs. Viable proposals to simplify DTC provisions dealing with service income and align them with current challenges such as the digital economy and the increasing volume of remote services are offered, particularly in light of the likely impact of the 'BEPS package' and its subsequent MLI. This book is poised to become one

of the key practice resources for tax lawyers, in-house counsel, and policymakers in the coming years. Interested academics too will benefit from the author's skill in recognizing the ongoing role of taxation fundamentals in the major revolution currently underway.

FUNDAMENTAL PRINCIPLES OF EU LAW AGAINST MONEY LAUNDERING

Routledge This book critically analyses fundamental principles of EU law for the control of international economic crime. Discussing how the reporting system and the exchange of information are at the heart of the global anti-money laundering regime, the study also looks at the inferential force of financial intelligence in criminal proceedings and the responsibilities this places on prosecutors and criminals alike. The author closely examines the application of Article 8(2) of the European Court of Human Rights for the retention and movement of the fingerprints, cellular samples and DNA profiles of unconvicted persons, and argues the incompatibility with the ECHR, along with the effect of socially stigmatising unconvicted persons. The work concludes with exploring how financial regulation has, inter alia, shifted responsibility to businesses and financial institutions to become more transparent and accountable to financial regulators and tax authorities. This critical analysis is essential reading for law students and the Judicial Body, as well as financial crime investigators and regulators.

DOUBLE (NON-)TAXATION AND EU LAW

Kluwer Law International B.V. Everywhere, new tax rules are under development to engage with the ever-increasing complexity and sophistication of aggressive tax planning and to reverse the tax base erosion it leads to. The most prominent initiative in this context is the Base Erosion and Profit Shifting (BEPS) project of the OECD. Although double non-taxation is among the main issues the BEPS

project intends to address, this book shows that this phenomenon has not yet been fully understood. Focusing on the fundamental freedoms and the State aid rules of the EU, this book thoroughly explains the nature of double non-taxation from an EU law perspective, its relation to double taxation, and the impact of EU law on these phenomena. Among the issues dealt with in the course of the analysis are the following: - locating the gaps and inconsistencies among domestic tax systems exploited by taxpayers; - hybrid mismatch arrangements as a prime example of double non-taxation; - political efforts undertaken within the EU in order to address double taxation and double non-taxation; - double non-taxation in the European VAT system; - the convergence of the fundamental freedoms and the State aid rules; - the ECJ's dilemma with regard to juridical double taxation; - the deviating approach with regard to economic double taxation; - the potential impact of the ECJ's case law on the EU law compatibility of double non-taxation. The tax jurisprudence of the ECJ is referred to and comprehensively analysed throughout this whole book. A final chapter provides an outlook on possible developments in the future. By providing the first in-depth analysis of EU law's impact on double non-taxation - and the double taxation relief standards with which it is intimately related - this book takes a giant step towards greater legal certainty in this challenging area of tax law. It will quickly take its place as a major practical analysis which benefits tax authorities, scholars, and tax practitioners across Europe and even beyond.

COMMUNITIES IN ACTION

PATHWAYS TO HEALTH EQUITY

National Academies Press In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

ECKM2014-PROCEEDINGS OF THE 15TH EUROPEAN CONFERENCE ON KNOWLEDGE MANAGEMENT

ECKM2014

Academic Conferences and Publishing International The world economy in which we are living poses challenges that lead to a realization that 'more of the same' will be difficult to sustain. This provides an illustration that, in order to create new or modified knowledge practices, strengthen customer relationships and thus positively influence customer satisfaction, organizations must be flexible in configuring (combining) knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning (forgetting) becomes a critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning and knowledge management. How can organizations tailor, use, and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management (KM) and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business, management and organization science as well as cognitive science. Emphasis will be put on systematic learning from experience, KM tools and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight (i.e., do not place considerable additional burden on users and KM experts), allow an incremental adoption (i.e., do not require large up-front investment before any return of investment is at least visible), and are flexible regarding frequent changes in experts and topics. Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge-intensive organizations.

CAPITAL IN THE TWENTY-FIRST CENTURY

Harvard University Press The main driver of inequality—returns on capital that exceed the rate of economic growth—is again threatening to generate extreme discontent and undermine democratic values. Thomas Piketty's findings in this ambitious, original, rigorous work will transform debate and set the agenda for the next generation of thought about wealth and inequality.

THE FUTURE OF PRODUCTIVITY

OECD Publishing This book addresses the rising productivity gap between the global frontier and other firms, and identifies a number of structural impediments constraining business start-ups, knowledge diffusion and resource allocation (such as barriers to up-scaling and relatively high rates of skill mismatch).

ENTERPRISE RESOURCE PLANNING

FUNDAMENTALS OF DESIGN AND IMPLEMENTATION

Springer This book introduces the fundamental principles of understanding business requirements to apply enterprise resource planning (ERP) in order to meet business needs. The book also helps readers understand the usage of ERP for monitoring and controlling business processes, while providing practical oriented solutions to the design and implementation of ERP. Using the provided framework, a business can decide to provide more value at lower cost which increases its competitive advantage. This should be an ideal reference for executives, researchers and consultants in project management of ERP. ERP can be considered to be an integrated package of business process. The scope of ERP determines the extent of automation of business process. For example if ERP covers Human Resource (HR) and finance business processes only, then business process related HR and finance are automated. Typically business process that are automated in HR and finance employee entry and exist process, allocation of employee ID, payroll, processing , income tax planning and actual deduction etc. There is seamless flow of employee data and information is available at an effectively faster rate to take appropriate decision. As custom demand increases, there is a need to meet the changing scenario with speed and efficiency. While there is a need to increase productivity, there is also a need to reduce cost of operation. The repetitive business processes can be handled effectively by automating them and freeing human resources for meeting other uncertainties. These automations not only should be done for each department, but also should cut across different departments. Thus there is a need for automating business processes at enterprise level. This enterprise level automation started with MRP, then MRP II, ERP and then finally open source ERP have taken centre stage. Out of the standard products available in the market, an organization can chose an ERP product for implementation, depending on the features available and the total cost of ownership (TCO). This comparison helps an organization to choose the product that best suits the needs for the organization. *Enterprise Resource Planning: Fundamentals of Design and Implementation* highlights these concepts while discusses different good practices to design and implement ERP.
