INTRODUCTION TO ANATOMY & PHYSIOLOGY TEACHER GUIDE

New Leaf Publishing Group Volume One, The Musculoskeletal System, opens with the building blocks of your body—the cells. Your body is built from many kinds of cells and tissues, and you will learn how they work. Even the bones and muscles that give you strength and speed depend on many types of cells. This book will: Show you the ins and outs of the bones in your skeleton and how they function Give detail as to how your marvelous muscles move you Provide a detailed glossary in the back for quick reference! Throughout the book you will learn things to do to keep your body healthy. But in a fallen, cursed world things are bound to go wrong. We will look at what happens when disease or injury affects bones and muscles. Volume Two, Cardiovascular and Respiratory Systems. From the level of the cell to the organs themselves, we will examine these systems in depth. Here you will learn: The incredible design of the human heart and how it is really "two pumps in one!" How blood moves through an incredible network of arteries and veins What "blood pressure" is and the marvelous systems that help regulate it How the respiratory system allows us to get the "bad air out" and the "good air in" Along the way, we will see what happens when things go wrong. We will also suggest things to do to keep the heart and lungs healthy. Although the world insists that our bodies are merely the result of time and chance, as you examine the human body closely, you will see that it cannot be an accident. It can only be the product of a Master Designer.

DEVELOPMENT OF SCIENCE TEACHERS' TPACK

EAST ASIAN PRACTICES

Springer Science is a subject matter that requires learners to explore the world and develop their own abilities on the basis of that exploration. As technology broadens and deepens, science teachers need to expand their Technological Pedagogical Content Knowledge (TPACK), which determines how well they use technology to help students learn science. The book details our efforts to prepare science teachers to teach with the help of technology, examining various aspects of teacher education, professional development and teaching material preparation. It consists of three parts, which focus on: how TPACK is conceptually constructed within the field of science education, how teacher evaluation and teaching materials are developed and utilized based on the transformative model and how science teachers are prepared and supported with electronic resources based on the integrative model. The book offers a valuable resource for all those working in science education, as well as those readers who are interested in teacher education. Science teachers will come to know how simulations and animations can pedagogically support student learning. Practices for teachers' TPACK development such as learning-by-design, evaluation and measurement and teacher communities are also addressed, applied and discussed in the case of science teachers. The individual chapters will provide teacher educators and researchers from all disciplines with new insights into preparing teachers for the Digital Era.
