### **RESEARCH ANTHOLOGY ON INSTILLING SOCIAL JUSTICE IN THE CLASSROOM**

---

**IGI Global** The issue of social justice has been brought to the forefront of society within recent years, and educational institutions have become an integral part of this critical conversation. Classroom settings are expected to take part in the promotion of inclusive practices and the development of culturally proficient environments that provide equal and effective education for all students regardless of race, gender, socio-economic status, and disability, as well as from all walks of life. The scope of these practices finds itself rooted in curriculum, teacher preparation, teaching practices, and pedagogy in all educational environments. Diversity within school administrations, teachers, and students has led to the need for socially just practices to become the norm for the progression and advancement of education worldwide. In a modern society that is fighting for the equal treatment of all individuals, the classroom must be a topic of discussion as it stands as a root of the problem and can be a major step in the right direction moving forward. Research Anthology on Instilling Social Justice in the Classroom is a comprehensive reference source that provides an overview of social justice and its role in education ranging from concepts and theories for inclusivity, tools, and technologies for teaching diverse students, and the implications of having culturally competent and diverse classrooms. The chapters dive deeper into the curriculum choices, teaching theories, and student experience as teachers strive to instill social justice learning methods within their classrooms. These topics span a wide range of subjects from STEM to language arts, and within all types of climates: PK-12, higher education, online or in-person instruction, and classrooms across the globe. This book is ideal for in-service and preservice teachers, administrators, social justice researchers, practitioners, stakeholders, researchers, academicians, and students interested in how social justice is currently being implemented in all aspects of education.

## RATING EFL WRITTEN PERFORMANCE

---

**Walter de Gruyter** The study focuses on the investigation of the process during which raters of EFL written performance make their decisions. It consists of a pilot and a main study, each of which concentrates on assessment of writing. The rationale is to detect the decision-making processes that raters follow, which can be used for training raters, and with which the reliability of rating can be improved. The pilot study is based on data collected during a large-scale language proficiency assessment of two age groups from learners of English and German languages. Raters were asked to think aloud during the rating task. Data was then transcribed and analysed. The participants in the main study were novice raters, who produced verbal protocols. 37 EFL teacher trainees took part in rater training and practised think-aloud protocol production. Then, they evaluated ten compositions written by EFL learners and verbalised their thought processes. The verbal protocols served as a basis for data collection. The analysis of data resulted in the

conclusion according to which more reliable and objective assessment is possible when evaluating written performance.

## **OXFORD STUDIES IN EXPERIMENTAL PHILOSOPHY VOLUME 3**

---

**Oxford University Press, USA** The new field of experimental philosophy has emerged as the methods of psychological science have been brought to bear on traditional philosophical issues. Oxford Studies in Experimental Philosophy is the place to go to see outstanding new work in the field. It features papers by philosophers, papers by psychologists, and papers co-authored by people in both disciplines. The series heralds the emergence of a truly interdisciplinary field in which people from different disciplines are working together to address a shared set of questions. The papers in this third volume illustrate the ways in which the field continues

to broaden, taking on new methodological approaches and interacting with substantive theories from an ever wider array of disciplines. Some recent research in experimental philosophy is going more deeply into well-established questions in the field, while other strands of research are exploring issues that scarcely appeared in the field even a few years ago. Thus, we see the introduction of new empirical and statistical methods (network analysis), new theoretical approaches (formal semantics), and the development of entirely new interdisciplinary connections (in the emerging field of "experimental jurisprudence").

### **TREATISE ON PROCESS METALLURGY, VOLUME 3: INDUSTRIAL PROCESSES**

---

**Newnes** Process metallurgy provides academics with the fundamentals of the manufacturing of metallic materials, from raw materials into finished parts or products. Coverage is divided into three volumes, entitled Process Fundamentals, encompassing process fundamentals, extractive and refining processes, and metallurgical process phenomena; Processing Phenomena, encompassing ferrous processing; non-ferrous processing; and refractory, reactive and aqueous processing of metals; and Industrial Processes, encompassing process modeling and computational tools, energy optimization, environmental aspects and industrial design. The work distills 400+ years combined academic experience from the principal editor and multidisciplinary 14-member editorial advisory board, providing the 2,608-page work with a seal of quality. The volumes will function as the process counterpart to Robert Cahn and Peter Haasen's famous reference family, Physical Metallurgy (1996)--which excluded process metallurgy from consideration and which is currently undergoing a major revision under the editorship of David Laughlin and Kazuhiro Hono (publishing 2014). Nevertheless, process and extractive metallurgy are fields within their own right, and this work will be of interest to libraries supporting courses in the process area. Synthesizes the most pertinent contemporary developments within process metallurgy so scientists have authoritative information at their fingertips Replaces existing articles and monographs with a single complete solution, saving time for busy scientists Helps metallurgists to predict changes and consequences and create or modify whatever process is deployed

## OFFICIALLY HISPANIC

---

---

### CLASSIFICATION POLICY AND IDENTITY

---

**Lexington Books** *Officially Hispanic* takes a critical look at the American government's classification system of ethnicity and race. Classification policies - related to issues of identity and civil rights - are an important feature of American politics. The classification of Hispanic or Latino is especially significant due to the large percentage of the population identified in that category. Delving into questions of group categorization and the nature of membership, identity, and ethnic groups, Idler argues that the Hispanic category, as currently used by the federal government, does not adequately capture the multiplicity of circumstances and identities among Hispanics. Applicable in the upper level undergraduate or graduate public policy, political science, and cultural studies classroom, as well as for academics and practitioners, this timely inquiry addresses one of the central questions of modern states: how to socially and politically integrate all of its citizens.

### MODERN APPROACHES FOR INTELLIGENT INFORMATION AND DATABASE SYSTEMS

---

**Springer** This book offers a unique blend of reports on both theoretical models and their applications in the area of Intelligent Information and Database Systems. The reports cover a broad range of research topics, including advanced learning techniques, knowledge engineering, Natural Language Processing (NLP), decision support systems, Internet of things (IoT), computer vision, and tools and techniques for Intelligent Information Systems. They are extended versions of papers presented at the ACIIDS 2018 conference (10th Asian Conference on Intelligent Information and Database Systems), which was held in Dong Hoi City, Vietnam on 19-21 March 2018. What all researchers and students of computer science need is a state-of-the-art report on the latest trends in their respective areas of interest. Over the years, researchers have proposed increasingly complex theoretical models, which provide the theoretical basis for numerous applications. The applications, in turn, have a profound influence on virtually every aspect of

human activities, while also allowing us to validate the underlying theoretical concepts.
