## Radiochemistry and Nuclear Chemistry

Nuclear chemistry comprises isotope chemistry, radiochemistry, radiation chemistry and nuclear reaction chemistry, along with applications. These interrelated fields are all covered in this textbook for chemists and chemical engineers. This new edition of the standard work 'Nuclear Chemistry' has been completely rewritten and restructured to suit teaching and learning needs in a wide range of chemistry courses, such as basic courses in radiochemistry, or more advanced nuclear chemistry courses. The book is divided into sections that closely fit teaching demands. The first chapter gives a broad introduction and background to the subject, and the second chapter covers stable isotopes. Chapters 3 to 9 comprise what is generally regarded as 'radiochemistry'. Chapters 10 to 17 offer a course in nuclear reaction chemistry. Chapter 18 deals with biological radiation effects for the chemist. The last four chapters give a guide to nuclear energy: energy production, fuel cycle, waste management, the largest applied field of nuclear chemistry. Over 200 exercises, with model answers, remain largely unchanged from the first edition, so teachers working from the earlier text should find only advantages in switching to this new restructured course book on all aspects of nuclear chemistry. 'The book fully meets the authors objectives, it is well written in a logical, objective, thought-provoking and quite easily readable style. It should appeal to the serious student of radio- and nuclear chemistry at either undergraduate or postgraduate level, as well as to readers with a more general interest in nuclear science and its impact on the environment.' - Applied Radiation and Isotopes, July 1995 'This book is an excellent, readable account of a significant part of the scientific achievements of more than half this century. The authors have dedicated the book to Nobel Laureate Glenn T. Seaborg and its scholarship makes it a fitting tribute.' - Radiological Protection Bulletin, December 1995

## A Constructivist Approach to Its Teaching and Learning

Psychology Press This book is a result of a workshop where 14 science educators were invited to draft chapters on the implications that the research studies in a specific content area of science have for its teaching. The relations between social forces and perceptions of purpose and content lay behind discussions in the workshop, and influenced the emergence of three major issues concerning science content: its variety; its complexity; and the relation between content and action. Chapters include: (1) "Science Content and Constructivist Views of Learning and Teaching" (Peter Fensham; Richard Gunstone; and Richard White) and "Constructivism: Some History" (David Hawkins); (2) "Beginning to Teach Chemistry" (Peter Fensham); (3) "Generative Science Teaching" (Merlin Wittrock); (4) "Constructivism, Re-constructivism, and Tack-oriented Problem-solving" (Mike Watts); (5) "Structures, Force, and Stability. Design a Playground" (Cliff Malcolm); (6) "Pupils Understanding Magnetism in a Practical Assessment Context: The Relationship Between Content, Process and Progression" (Galen Erickson); (7) "Primary Science in an Integrated Curriculum" (Maureen Duke; Wendy Jobling; Telsa Rudd; and Kate Brass); (8) "Digging into Science-A Unit Developed for a Year 5 Class" (Kate Brass and Wendy Jobling); (9) "Year 3: Research into Science" (Kate Brass and Telsa Rudd); (10) "The Importance of Specific Science Content in the Enhancement of Metacognition" (Richard Gunstone); (11) "The Constructivist Paradigm and Some Implications for Science Content and Pedagogy" (Malcolm Carr; Miles Barker; Beverley Bell; Fred Biddulph; Alister Jones; Valda Kirkwood; John Pearson; and David Symington); (12) "Making High-tech Micrographs Meaningful to the Biology Student" (James Wandersee); (13) "Year 9 Bodies" (Anne Symons; Kate Brass; and Susan Odgers); (14) "Learning and Teaching Energy" (Reinders Duit and Peter Haeussler); (15) "Working from Children's Ideas: Planning and Teaching a Chemistry Topic from a Constructivist Perspective" (Philip Scott; Hilary Asoko; Rosalind Driver; and Jonathan Emberton); (16) "States of Matter-Pedagogical Sequence and Teaching Strategies Based on Cognitive Research" (Ruth Stavvy); (17) "Pedagogical Outcomes of Research in Science Education: Examples in Mechanics and Thermodynamics" (Laurence Viennot and S. ## Chemistry: An Atoms First Approach

Cengage Learning Steve and Susan Zumdahl's texts focus on helping students build critical -thinking skills through the process of becoming independent problem-solvers. They help students learn to think like chemists so they can apply the problem solving process to all aspects of their lives. In this Second Edition of CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models, and to evaluate outcomes. ## Student Study Guide and Solutions Manual to accompany General Organic and Biological Chemistry, 1e

Wiley A whole new twist on General, Organic and Biological Chemistry! Introducing a unique approach, with a whole new twist designed for the specific needs of the General, Organic, and Biochemistry course! Kenneth Raymond's General, Organic, and Biological Chemistry offers a concise, manageable, highly effective alternative with an integrated Table of Contents. Now, students can get to the biochemistry topics earlier, better appreciate how the course relates to careers in allied health, and see connections among these three areas of chemistry. Here's how Raymond's approach works: 1. Integration. The text presents interrelated topics from general, organic, and biochemistry in the same or adjacent chapters. This highly integrated approach reduces excess review, and enables students to explore biochemical topics earlier in the course. The result is a briefer, more focused, and more engaging text. 2. Applications. Raymond takes a very applied approach, filled with real-life examples that effectively connect the chemistry to future careers in health-related fields. Chapter-opening vignettes focus on the link between chemistry and everyday topics. 3. Relevance. Online videos and articles from ScienCentral connect the chemistry presented in the text to current events. 4. Brief and accessible. Concise, readable chunks of text make the book accessible for a wide range of students. 5. Lots of support--online and in the text. \* eGrade Plus online resources: Homework management, a complete online text, videos, interactive problems, and more--all in one convenient website. eGrade Plus is included free with new copies when the instructor adopts the eGrade Plus version of the text.
