The aim of this collection of over 230 questions is to offer students an element of self-assessment, as they progress through the companion book or revise for examinations. Lecturers may find some of the questions useful as a template when setting questions of their own, but should note that the questions are primarily educational in intent; their discriminatory power has not been tested. The questions are grouped under the same headings as the chapters of the companion textbook, so they become progressively more advanced (see Contents). Occasional statements call for information from later chapters. Medically relevant questions are introduced wherever they are appropriate. I have set at least one question on each learning objective given at the start of the chapter in the companion volume, to help you assess your achievement of the learning objectives. Some questions require you to integrate information from other chapters too. The questions aim to test basic understanding, fundamental principles and medical relevance. Hopefully they avoid excessive detail - always the examiner's easy option! The questions. Most of the questions are multiple choice questions (MCQs), generally with five true/false statements, but occasionally more or less than five. Although some 'educationalists' now demand single correct answer questions (SAQs, one correct answer out of four or five options), these test less knowledge, so the MCQ style has been retained here. To add variety, there is a sprinkling of other styles of question, such as 'extended matching questions' (i.e. choose the best answer from a list), data interpretation problems, and little numerical problems that test reasoning power and ability to do simple calculations. The answers. Each answer is accompanied by a brief explanation, and very often an illustrative figure, which should help if you got the answer wrong. Most of the figures are from the accompanying textbook, but there are also new, explanatory diagrams after some questions. It is sometimes difficult to avoid ambiguity in MCQ questions; so use your common sense - choose the answer that will be right most of the time, rather than a remote, rare possibility. Nevertheless, if you disagree with the 'official' answer, do let me know. Introduction to Human Anatomy and Physiology Pageburst Retail W.B. The Mechanism of Man An Answer to the Question What Am I?, Vol. 2: A Popular Introduction to Mental Physiology and Psychology; The Mechanism in Action (Classic Reprint) [Forgotten Books](#) Excerpt from The Mechanism of Man: An Answer to the Question What Am I?, Vol. 2: A Popular Introduction to Mental Physiology and Psychology; The Mechanism in Action This characteristic presents itself turn where we may in the exploration of Nature. The normal action is always so complete and equable, the co-ordination of parts is so perfect, that we can see little more than results and are almost unconscious of the processes by which they are brought about. The Physician studying for years the action of the healthy body could learn but little of its internal mechanism and of the functions of its various organs. He will procure more Of this knowledge in a few hours Of Observation by the bedside of the sick, when the organs are not working in harmony and their functions are imperfectly performed, when the human mechanism is out of gear, than in as many years of observation Of the healthy body or even of the lifeless form - for anatomy does not reveal function.
