ARABIAN NIGHTS, IN 16 VOLUMES

VOLUME X

Cosimo, Inc. Notorious for the delight he took in tweaking the sexual taboos of the Victorian age-as well as the delight he took in the resulting shock of his bashful peers-British adventurer, linguist, and author CAPTAIN SIR RICHARD FRANCIS BURTON (1821-1890) is perhaps best remembered for his unexpurgated translation of the Eastern classic The One Thousand and One Nights, more famously known today as The Arabian Nights. Originating in Persian, Indian, and Arabic sources as far back as the ninth century AD, this collection of bawdy tales-which Burton was the first to bring to English readers in uncensored form-has exerted incalculable influence on modern literature. It represents one of the earliest examples of a framing story, as young Shahrazad, under threat of execution by the King, postpones her death by regaling him with these wildly entertaining stories over the course of 1,001 nights. The stories themselves feature early instances of sexual humor, satire and parody, murder mystery, horror, and even science fiction. Burton's annotated 16-volume collection, as infamous as it is important, was first published between 1885 and 1888, and remains an entertainingly naughty read. Volume X-which concludes Burton's initial publication of the tales-includes: ["Ma'aruf the Cobbler and His Wife Fatimah" [Burton's essays on the origins of the tales and other background material [appendices and indexes [and more.

DERRIDA WORDBOOK

Edinburgh University Press A glossary of words associated with Jacques Derrida accommodating the far-reaching implications of his work This cornucopia of words and definitions intervenes at crucial points of tension across the entire range of Derrida's publications, including those published posthumously. It offers sustained expository engagement with a series of

67 key words - from Aporia to Yes - having significance throughout Derrida's thought and writing. Touching on the literary, as well as on political, aesthetic, phenomenological and psychoanalytic discourses, and tracing how Derrida's own practice of close reading shadows faithfully the texts he reads before producing a breaking point in the logical limits of a given text, each word, the essays illustrate, is not a final word. Instead, each shows itself, through close reading that places the terms, figures, tropes, and motifs in their broader contexts, to be a gateway, opening on to innumerable, interconnected concerns that inform the work of Jacques Derrida.

THE ENCYCLOPEDIA OF VOLCANOES

Elsevier Volcanoes are unquestionably one of the most spectacular and awe-inspiring features of the physical world. Our paradoxical fascination

with them stems from their majestic beauty and powerful, sometimes deadly, destructiveness. Notwithstanding the tremendous advances in volcanology since ancient times, some of the mystery surrounding volcanic eruptions remains today. The Encyclopedia of Volcanoes summarizes our present knowledge of volcanoes; it provides a comprehensive source of information on the causes of volcanic eruptions and both the destructive and beneficial effects. The early chapters focus on the science of volcanism (melting of source rocks, ascent of magma, eruption processes, extraterrestrial volcanism, etc.). Later chapters discuss human interface with volcanoes, including the history of volcanology, geothermal energy resources, interaction with the oceans and atmosphere, health aspects of volcanism, mitigation of volcanic disasters, post-eruption ecology, and the impact of eruptions on organismal biodiversity. Provides the only comprehensive reference work to cover all aspects of volcanology Written by nearly 100 world experts in volcanology Explores an integrated transition from the physical process of eruptions through hazards and risk, to the social face of volcanism, with an emphasis on how volcanoes have influenced and shaped society Presents hundreds of color photographs, maps, charts and illustrations making this an aesthetically appealing reference Glossary of 3,000 key terms with definitions of all key vocabulary items in the field is included

THE NEW CATALOG OF MAYA HIEROGLYPHS, VOLUME TWO

CODICAL TEXTS

University of Oklahoma Press This long-awaited resource complements its companion volume on Classic Period monumental inscriptions. Authors Martha J. Macri and Gabrielle Vail provide a comprehensive listing of graphemes found in the Dresden, Madrid, and Paris codices, 40 percent of which are unique to these painted manuscripts, and discuss current and past interpretations of these graphemes. The New Catalog uses an original coding system developed for the Maya Hieroglyphic Database Project. The new three-digit codes group the graphemes according to their visual, rather than functional, characteristics to allow readers to see distinctions between similar signs. Each entry contains the grapheme's New Catalog code, an image, the corresponding Thompson number, proposed syllabic and logographic values, calendrical significance, and bibliographical citations. Appendices and an index of signs from both volumes contain images of all graphemes and variants ordered by code, allowing readers to search for graphemes by visual form or by their proposed logographic and phonetic values. Together the two volumes of the New Catalog represent the most significant updating of the sign lists for the Maya script proposed in half a century. They provide a cutting-edge reference tool critical to the research of Mesoamericanists in the fields of archaeology, art history, ethnohistory, and linguistics, and a valuable resource to scholars specializing in comparative studies of writing systems and related

disciplines.
