Pediatric Anesthesia: A Problem-Based Learning Approach *Oxford University Press* Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL) method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a

variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The "Stem Case and Key Questions" and "Discussion" sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations. *Clinical Echocardiography Review A Self-Assessment Tool* Lippincott Williams & Wilkins "The book focuses on the time tested way of "the Socratic method" to teach the key concepts to busy clinical cardiologists, fellows, anesthesiologists and sonographers using a multiple choice question & answer format. The book will emphasize diagnostic interpretation rather than clinical management. This book is comprehensive with chapters ranging from fundamentals to new technologies. The format of each chapter is standardized with 3 types of questions. At the beginning, there are simple Type I questions followed by an answer. Then, Type II questions involving a question associated with a still frame graphic (M-Mode, 2-D or a 3-D) come next and are followed by an answer. Finally, Type III questions are presented involving case studies associated with several questions based on movies and still frames"-- *Disease & Health* Lorenz Educational Press **Color Overheads Included!** This book represents a program of basic studies dealing with disease and health. The nature of disease and types of diseases, including both non-communicable and communicable diseases are detailed. Information is provided on substance abuse and its effects on the human body. University Press Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL) method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based Learning series reviews topics in general anesthesiology utilizing the PBL approach. Each chapter deals with conditions and problems in anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Current in its knowledge of organ systems and management, the text keeps pace with new technology, new drugs, and new surgical techniques coupled with current guidelines for anesthetic management. Cases highlight the practical issues that arise in the operating room and offers solutions for them. The book can be used to review an upcoming clinical case or as a PBL tool. The Stem Case and Key Questions and Discussion sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the specialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations. *Mayo Clinic Critical and Neurocritical Care Board Review Oxford University Press, USA* Mayo Clinic Critical and Neurocritical Care Board Review is a comprehensive review of critical care medicine and neurocritical care to assist in preparation of the neurocritical care and general critical care boards. *Pediatric Cardiology Board Review Lippincott Williams & Wilkins* Pediatric Cardiology Board Review is an academic dividend of the popular Pediatric Cardiology Review biannual course that was started by Dr. Chang and Dr. Eidem.
