## Ucc / Common Law Definitions and Outlines

**CreateSpace** UCC contract law is complicated because many established common law principles are overturned by the statute. For instance, the mirror image rule that has stood in courts for centuries is all but completely destroyed by the UCC. On another hand the common law itself is constantly evolving. In the area of service and other non-sale of goods contracts, written contracts are now called integrations and what's more there are two distinct types of integrations: full and partial, with different impacts on the parole evidence rule. ### The Study Guides, Outlines, and Advice That You Need to Get an A

**Booktango** Property Law I is an incredibly important class, it explores the very idea of ownership. I took this class my very first term of law school, I came in with nothing but determination and I left with the beautiful and sacred "A". It was later in my law school career where I began to realize that many people struggle with Property Law. I began to aid others by offering my knowledge and study habits as well as my outlines to my fellow students. Then, when I saw the vast improvement in their grades and abilities, I began to offer my services to a wider audience, thus leading to the making of this pamphlet. I scored an A in Property Law and you will too.

### Lexon

### Digital Contracts

*THIS RELEASE IS AN EARLY DRAFT FOR FEEDBACK AND DISCUSSION.* \*Lexon\* is a new type of program language that anyone can read without prior knowledge of programming. It was made for blockchain \*smart contracts\* and can be used to write (more) legal smart contracts. Its application points beyond blockchain and legal concerns though, to any circumstance where people would benefit from algorithms to be more transparent. It is really about a new paradigm in programming. This book is a comprehensive introduction into the language, its use and its purpose by the creator. It starts out with practical examples, gives context for the online editor to try Lexon live, touches on the philosophical and the history of (more) human-readable languages. The author published the first best seller on smart contracts and with this new book proposes where the journey will go. \*Lexon\* achieves the Holy Grail of Computational Law: it captures the meaning of contracts for automatic processing. But Lexon is also useful for any community or company that wants its smart contracts to be readable for all its members. Programming should long have been this easy. Legal prose should long have been as accessible and affordable as contracts written in Lexon are. Lexon joins the old and the new, the power of the word with the power of the electron, and by this, super charges blockchain technology in an unexpected way that will touch many walks of life. This book is for everyone who is curious and has an open mind. Lexon is still under development. Find updates about Lexon at <https://www.lexon.tech>. \*In non-technical terms,\* this book presents\* examples of legal, smart contracts that anyone can read, written in Lexon; \* visualizes what Lexon does differently from other program languages to stay closer to human language and to keep more semantic information intact; \* proposes what elements constitute human-readability and how they shape up with Lexon;\* Lexon's grammar, vocabulary and document structure are explained; \* abstract syntax trees are illustrated; \* the term 'meaning' is discussed to explore Lexon's relationship to AI; \* the research leading to the human-readable program language is retraced and put into the context of Computational Law, and the history of program language;\* finally, applications and benefits of the new capabilities are listed. ## Contracts

### A Modern Coursebook

**Aspen Publishing** *Contracts: A Modern Coursebook, Second Edition* by Ben Templin is an innovative coursebook unlike any other on the market. The book takes a hybrid approach between a "traditional" casebook and a problems-based casebook, incorporating a more thorough discussion of the law followed by cases then problems. Featuring a unique design that engages the reader and incorporates professional skills and experiential-type learning, *Contracts: A Modern Coursebook* is a revolutionary, classroom-tested book. Rather than playing "hide the ball," professors using this book will be able to say, "Here's the ball. Let's play catch." New to the Second Edition: Now Over 500 Questions and Problems, nearly doubling the number of questions and answers for professors to use to assess students. A new section—Questions for Review—tests students' understanding of the law before they try the more difficult analytic problems. Enhanced analytic problems—updated based on feedback from professors and students. New cases with tighter editing to adjust the mix between classic and contemporary cases for greater balance, and to focus on the core lesson. More flowcharts and tables, providing additional visual learning aids to help students synthesize concepts. More examples and case illustrations to keep students engaged and to stimulate critical thinking. Design enhancements, including a redesign of "Rule Boxes" that makes parsing the rule statements easier for students. A new numbering system to more easily track "Learning Outcomes" to "Explanations" to "Case Law" to "Assessments." Professors and students will benefit from: Learning Objectives: Unlike traditional casebooks, every chapter begins with three to seven precise learning goals. Millennials respond positively when learning objectives are stated at the beginning of a lesson. The defined learning objectives for each chapter help professors comply with ABA requirements to establish learning outcomes that consist of "clear and concise statements of knowledge that students are expected to acquire." Clear and Concise Explanations of the Law: Much like a hornbook, every chapter provides clear and concise explanations of the law. Overarching rules are identified and highlighted visually. An analytical framework is provided to help students parse the rule. Examples and Case Illustrations explain the parameters and application of the rule. Test Yourself questions are embedded exercises within the explanation section to let students assess their understanding of the rules. Case Law—Developing Critical Reasoning Skills: Since students learn the law before reading the cases, the focus of case analysis is on the reasoning that the court applies. By posing direct questions and giving students prompts to respond to as they read the case, students build critical reasoning skills, and, as a result, are better prepared for class. Problem Solving and Analysis—Built-in Formative Assessment: At the end of each chapter, the

*Problem Solving and Analysis* section provides students the opportunity to build critical thinking skills (the highest level of Bloom's Taxonomy of Educational Objectives) through a series of thought-provoking hypotheticals based on real-world scenarios. The rich set of questions builds accountability and addresses the challenge of providing in-semester formative feedback to large classes to help professors comply with ABA formative assessment standards. *Contemporary Layout and Design: The contemporary book design is optimized to improve readability, heighten student engagement, and increase retention. Concise and Compact: Shorter than competing casebooks, the casebook can be used in 4-credit, 5-credit, or 6-credit courses. Classroom Tested: Contracts: A Modern Coursebook has been classroom tested over three years. More than 400 students have used the text for both the first year contracts course and as a supplement for a third year remedies course. Students have been overwhelmingly enthusiastic about the content, format, and approach. The purchase of this Kindle edition does not entitle you to receive access to the online e-book, practice questions from your favorite study aids, and outline tool available through CasebookConnect.*
