Launching Democracy in South Africa The First Open Election, April 1994 *Yale University Press* South Africa's first ever non-racial and multi-party election was perhaps the most significant global event of 1994. From the ashes of a repressive, segregated and racist state emerged - miraculously and relatively free from bloodshed - a new, multi-racial nation, led by one of the political icons of the late twentieth century, Nelson Mandela. Based on a large-scale and non-partisan public information project, this book is the definitive account of the process of democratisation in South Africa. The Launching Democracy project mounted teams of observers and monitored the campaign, party organisation, the media and voter education efforts throughout the crucial and populous areas of the Western Cape, Natal and the Reef. The result is an unparalleled source of information about the way the election really worked and the political sociology of South Africa in general. Written by a team of distinguished experts, the book analyses the results of the election in detail (and publishes them in full for the first time). It examines the intricacies of the disputed electoral process and the drama of the count, revealing irregularities, rivalry and widespread fear and intimidation. In a highly readable final section, the book carries the story into the post-election reality, exploring popular opinion and the demands now facing the Mandela government.

Persistent Object Systems Proceedings of the Sixth International Workshop on Persistent Object Systems, Tarascon, Provence, France, 5-9 September 1994 *Springer Science & Business Media* The Sixth International Workshop on Persistent Object Systems was held at Les Mazets des Roches near Tarascon, Provence in southern France from the fifth to the ninth of September 1994. The attractive context and autumn warmth greeted the 53 participants from 12 countries spread over five continents. Persistent object systems continue to grow in importance. Almost all significant uses of computers to support human endeavours depend on long-lived and large-scale systems. As expectations and ambitions rise so the sophistication of the systems we attempt to build also rises. The quality and integrity of the systems and their feasibility for supporting large groups of co-operating people depends on their technical foundation. Persistent object systems are being developed which provide

a more robust and yet simpler foundation for these persistent applications. The workshop followed the tradition of the previous workshops in the series, focusing on the design, implementation and use of persistent object systems in particular and persistent systems in general. There were clear signs that this line of research is maturing, as engineering issues were discussed with the aid of evidence from operational systems. The work presented covered the complete range of database facilities: transactions, concurrency, distribution, integrity and schema modification. There were examples of very large scale use, one involving tens of terabytes of data. Language issues, particularly the provision of reflection, continued to be important.
