42 Rules for Sourcing and Manufacturing in China (2nd

Edition)

Happy About **Doing business in China is tougher than you think. Not only is the culture vastly different, but China's experience in manufacturing is still developing. It will be a few years before the majority of manufacturers are up to world standards. In the meantime, quality, contract laws, schedules and logistics must be closely monitored. As a result, the things Westerners must do to be successful are far different from dealing with American or European manufacturers. The best way to quickly come up to speed on these differences and how to handle them is to learn from the experience of others. Through over 20 extraordinary executive interviews, Rosemary Coates captured the essence of sourcing and manufacturing in China. '42 Rules for Sourcing and Manufacturing in China (2nd Edition)' is a pragmatic approach that every businessperson headed to China must read. For business people who are experienced in doing business in China, or for first-time visitors, this book will provide valuable insights from real executives and experts. These executives offer their personal experiences and recommendations about sourcing and manufacturing in China. Going beyond simple cultural do's and don'ts, you will discover: how business is really done how you can make things happen in China the mistake westerners often make, and how to avoid them what made these executives successful Based on her 25 years of supply chain experience, much of it spent living and working across Asia, Rosemary Coates has become an expert on doing business in China. Her own personal experiences in China are interwoven into this book.**

Flow Manufacturing -- What Went Right, What Went Wrong

101 Mini-Case Studies that Reveal Lean's Successes and Failures

CRC Press **This book tells 101 stories of company efforts to implement the many aspects of flow manufacturing -- including such topics as just-in-time production, total quality control, reorganization of factories into product-focused or customer-focused cells, plants-in-a-plant, material flows by the simplicity of visual kanban, supplier partnerships, quick setup of equipment, cross-training and job rotation of the work force, and many more. The 101 mini-case studies - dubbed "caselets" -- include 26 non-U.S. companies from 12 countries and cover a wide swath of industrial sectors, and include many well-known corporations such as Apple, Campbell Soup, Honeywell, and Boeing. From the 1980s to the present, the author has**

been taking the message of process improvement and customer-focused excellence far and wide. Most of these travels, usually in connection with delivering a seminar, include brief factory tours in which he compiled detailed notes and then organized them as brief reports – his unvarnished analysis or take on what they do well and what needs improvement. In the main the reports were then sent back to the hosts of the plant tour. These factory tours and these follow-up reports form the basis of the large majority of this book's caselets. Many of the caselets bring to life process-improvement methodologies in detail. With lots of caselets to draw from, the readers will find vivid examples of similar companies and processes within their respective industries. For example, the caselets often include applications of advanced concepts in cost management, employee training, performance management, supply chains, and logistics as well as applications of plant layout, quick setup, material handling, quality assurance, scheduling, ergonomics, and flow analysis.

Meet Me at the Fair: A World's Fair Reader

Lulu.com Together with the Olympics, world's fairs are one of the few regular international events of sufficient scale to showcase a spectrum of sights, wonders, learning opportunities, technological advances, and new (or renewed) urban districts, and to present them all to a mass audience. **Meet Me at the Fair: A World's Fair Reader** breaks new ground in scholarship on world's fairs by incorporating a number of short new texts that investigate world's fairs in their multiple aspects: political, urban/architectural, anthropological/ sociological, technological, commercial, popular, and representational. Contributors come from eight different countries and represent affiliations in academia, museums and libraries, professional and architectural firms, non-profit organizations, and government regulatory agencies. In taking the measure of both the material artifacts and the larger cultural production of world's fairs, the volume presents its own phantasmagoria of disciplinary perspectives, historical periods, geographical locales, media, and messages, mirroring the microcosmic form of the world's fair itself.

Plant and Service Tours in Operations Management Fast Track to Waste-Free Manufacturing Straight Talk from a Plant Manager

CRC Press Manufacturing in the United States is currently undergoing a major transition, yet large numbers of manufacturers simply do not recognize what it is all about. Many still operate under out dated manufacturing practices and do not see that the enemy is not the competition, but rather their own system of production. Batch, or mass manufacturing is still the preferred system of production for most U.S.-based industry. But to survive, let alone become globally competitive, companies will have to put aside their old mass manufacturing paradigms and completely change their entire production system. WFM will give you step-by-step directions to making rapid, lasting changes. Davis has created 4 new drivers of WFM and has linked them so you know what order to do them in and when it is time to move to the next driver. He covers nearly every aspect of the lean revolution and provides essential tools and techniques you will need to implement WFM. He also addresses the critical management issues that will arise in any plant that is striving to be world class. Drawing from more than 30 years of manufacturing experience, John Davis gives you tools and techniques for eliminating anything that cannot be clearly established as value added. WFM is not a theory. It is a proven process, and one the author has successfully implemented. He shares with you from his own experiences in guiding manufacturers through this process. Davis fully details the journey of a factory that moved from mass to waste-free manufacturing in a matter of 24 months. This factory was nationally recognized by wall street analysts as an effective manufacturing model. You get to sit in on their meetings and learn from their triumphs and failures. So hold on to your hat, because you are about to learn how to do what most in the field of world class manufacturing tell you isn't possible: to rapidly deploy WFM and change the system of production. Filled with checklists, an ongoing case study and, most important, strategies that will work, **Fast Track to Waste-Free Manufacturing: Straight Talk from a Plant Manager will provide you with the principles and methodology for WFM and a road map for its implementation. All you need is the will, the focus, and a sense of urgency about the future of U.S. manufacturing. If you are a plant manager, foreman, supervisor, or**

executive who wants to quickly transform your factory into a world class manufacturer, Mr. Davis' WFM methodology is "must reading." A 296 minute abridged version of this book is also available on four compact discs or audio cassettes from Productivity Press.

Manufacturing Analysis for Productivity and Quality/cost Enhancement Food Plant Sanitation Design, Maintenance, and Good Manufacturing Practices, Second Edition

CRC Press Food safety and quality are primary concerns in the food manufacturing industry. Written by an author with more than 35 years' experience in the food industry, **Food Plant Sanitation: Design, Maintenance, and Good Manufacturing Practices, Second Edition** provides completely updated practical advice on all aspects of food plant sanitation and sanitation-related food safety issues. It offers readers the tools to establish a food safety system to help control microbiological, physical, and chemical hazards. Understanding that sanitation is integral to food safety is the foundation for an effective food safety system. Beginning with that premise, this book presents some of the key components for such a system. The chapters address testing for and control of microorganisms in food manufacturing, including recent challenges in the industry due to pathogens such as *Listeria monocytogenes*. They also offer discussions on biofilms, regulatory requirements from the European Union, allergens, sanitary facility design, and describe proven best practices for sanitation as well as current sanitary requirements and regulatory changes from the FDA and USDA. In addition, the author presents methods for verifying sanitation. The final chapters identify good manufacturing practices for employees and present a comprehensive pest management plan, including control measures and chemical interventions. The book concludes with strategies for preventing chemical and physical food safety hazards. This reference provides a practical perspective for implementing food plant sanitation and safety processes. The author has included, wherever possible, examples of procedures, forms, and documents to help novice food safety and quality professionals develop effective food safety systems.
