The Methodological, Psychological and Policy Contributions of ETS

Springer This book is open access under a CC BY-NC 2.5 license. This book describes the extensive contributions made toward the advancement of human assessment by scientists from one of the world's leading research institutions, Educational Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis and evaluation, scientific psychology, and validity. Many of the developments presented have become de-facto standards in educational and psychological measurement, including in item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of international Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS) and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of contributions to the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology, and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and

Emotions and Emotional Intelligence in Organizations

MultiMedia Publishing An argumentation for the dualistic importance of emotions in society, individually and at community level. The current tendency of awareness and control of emotions through emotional

Chronology of Science

Infobase Publishing Chronology of Science contains approximately 2,000 cross-referenced entries, ranging from 50 to 150 words each, plus identifiers that categorize the entries into core areas (biology, chemistry, physics, marine science, space and astronomy, Earth science, and weather and climate). Also included are introductory and closing essays in each section, sidebars expanding upon important concepts in each time period, figure legends, appendixes directing the reader to further information on specific topics, a bibliography, and an index. This is a helpful reference tool for students looking for basic information about specific scientific events. The entries inspire the reader to investigate the topic further. After reading sections of the book, the reader will have gained accurate information about scientific history, as well as a sense of how scientific discoveries build upon events of the past, and an understanding of the way scientific theories have changed over time.

Biological Psychology

Cengage Learning Dr. James W. Kalat's **BIOLOGICAL PSYCHOLOGY** is the most widely used text in the course area, and for good reason: an extremely high level of scholarship, clear and occasionally humorous

writing style, and precise examples. Throughout all eleven editions, Kalat's goal has been to make biological psychology accessible to psychology students, not just to biology majors and pre-meds. Another goal has been to convey the excitement of the search for biological explanations of behavior, and Kalat delivers. Updated with new topics, examples, and recent research findings--and supported by new online bio-labs, part of the strongest media package yet--this text speaks to today's students and instructors. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Explorations in Neuroscience, Psychology and Religion

Routledge In the 1990s great strides were taken in clarifying how the brain is involved in behaviors that, in the past, had seldom been studied by neuroscientists or psychologists. This book explores the progress begun during that momentous decade in understanding why we behave, think and feel the way we do, especially in those areas that interface with religion. What is happening in the brain when we have a religious experience? Is the soul a product of the mind which is, in turn, a product of the brain? If so, what are the implications for the Christian belief in an afterlife? If God created humans for the purpose of having a relationship with him, should we expect to find that our spirituality is a biologically evolved human trait? What effect might a disease such as Alzheimer's have on a person's spirituality and relationship with God? Neuroscience and psychology are providing information relevant to each of these questions, and many Christians are worried that their religious beliefs are being threatened by this research. Kevin Seybold attempts to put their concerns to rest by presenting some of the scientific findings coming from these disciplines in a way that is understandable yet non-threatening to Christian belief.

Psychology, Mental Health and Distress

Bloomsbury Publishing Is depression simply the result of chemical imbalances, or Schizophrenia a wholly biological disorder? What role do the broader circumstances of an individual's social, cultural and heuristic world play in the wider scheme of their psychological wellbeing? In this groundbreaking and highly innovative text, Cromby et al deliver an introduction to the the biopsychosocial paradigm for understanding and treating psychological distress, taking into consideration the wider contexts that engender the onset of mental illness and critiquing the limitations in the sole use of the biomedical model in psychological practice. Rather than

biologically determined or clinically measurable, readers are encouraged to consider mental illness as a subjective experience that is expressed according to the individual experiences of the sufferer rather than the rigidity of diagnostic categories. Similarly, approaches to recovery expand beyond psychiatric medication to consider the fundamental function of methods such as psychotherapy, community psychology and service-user movements in the recovery process. Offering a holistic account of the experience of psychological distress, this text draws upon not only statistical evidence but places an integral emphasis on the service-user experience; anecdotal accounts of which feature throughout in order to provide readers with the perspective of the mental health sufferer. Taking an integrative approach to the psychology of mental health, the authors draw from a wealth of experience, examples and approaches to present this student-friendly and engaging text. This is core reading for anyone serious about understanding mental health issues and is suitable for undergraduate students taking introductory courses in psychology and abnormal psychology.

Pagan Fleshworks

The Alchemy of Body Modification

Simon and Schuster A groundbreaking work that sees the contemporary cultural trends of tattooing, piercing, implanting, and branding as a quest for a transformative psychic experience. • Features unforgettable color photographs by Steve Haworth, the foremost body modification artist in the United States. • Introduces a subculture that has gone far beyond the realm of simple tattooing. Acts of body modification are deeply rooted in physical impulses that are obscured in our technological society. As we become more removed from the physicality of our existence, we lose touch with an essential part of our humanity. Body modification is a way of reconnecting to our bodies, to the earth, and to the divine. Pagan Fleshworks reveals that the prevalence of body modification--tattooing, piercings, brandings, and implants--is the postmodern way to heal the body and enliven the soul. These "fleshworks" are the result of people creating their own rituals and symbols of meaning in order to feel a sense of the divine within. Maureen Mercury relates the various stages of obtaining fleshworks to the stages of alchemy, showing how fleshworks lead to psychic transformation--soul-making. Using mythological imagery and the stories of those who have chosen to modify their bodies, she identifies the signposts of our journey toward self-expression, exploring the connection between our desires and our outward life. More than 30 riveting color photographs by leading body modification artist Steve Haworth provide the perfect visual complement to this examination of the soul as it rises toward freedom.
