ASEAN-CHINA COOPERATION FOR ENVIRONMENTAL PROTECTION AND SUSTAINABLE ENERGY DEVELOPMENT

World Scientific In order for the joint research by Network of ASEAN-China Think-tanks (NACT) to reach out to a much wider audience, NACT began to publish joint research of all Working Groups since 2019. This book is a collection of research papers contributed by ASEAN and China scholars who attended NACT Working Group Meeting on Regional Cooperation for Sustainable Energy Development on April 16, 2019 and NACT Working Group Meeting on Environmental Protection in ASEAN and China on May 17, 2019. The contributing scholars give their ingenious and insightful thoughts on ASEAN-China energy and environmental protection cooperation from either a national or a regional perspective. Two NACT Working Group Reports are also incorporated in the appendices of this book, including innovative and practical policy recommendations on strengthening ASEAN-China sustainable energy and environmental protection cooperation in existing priority areas and identifying new ones.

HARD REAL-TIME COMPUTING SYSTEMS

PREDICTABLE SCHEDULING ALGORITHMS AND APPLICATIONS

Springer Science & Business Media Real-time computing plays a crucial role in our society since an increasing number of complex systems rely, in part or completely, on processor control. Examples of applications that require real-time computing include nuclear power plants, railway switching systems, automotive electronics, air traffic control, telecommunications, robotics, and military systems. In spite of this large application domain, most of the current real-time systems are still designed and implemented using low-level programming and empirical techniques, without the support of a scientific methodology. This approach results in a lack of reliability, which in critical applications may cause serious environmental damage or even loss of life. This book is a basic treatise on real-time computing, with particular emphasis on predictable scheduling algorithms. The main objectives of the book are to introduce the basic concepts of real-time computing, illustrate the most significant results in the field, and provide the basic methodologies for designing predictable computing systems useful in supporting critical control applications. The book is written for instructional use and is organized to enable readers without a strong knowledge of the subject matter to quickly grasp the material. Technical concepts are clearly defined at the beginning of each chapter, and algorithm descriptions are reinforced through concrete examples, illustrations, and tables.
