### PRICING AND REVENUE OPTIMIZATION

Stanford University Press This is the first comprehensive introduction to the concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to instructors who are using this book in their courses. For access to the solutions manual, please contact marketing@www.sup.org.

## HAGENBERG RESEARCH

---

Springer Science & Business Media Bruno Buchberger This book is a synopsis of basic and applied research done at the various research institutions of the Softwarepark Hagenberg in Austria. Starting with 15 coworkers in my Research Institute for Symbolic Computation (RISC), I initiated the Softwarepark Hagenberg in 1987 on request of the Upper Austrian Government with the objective of creating a scientific, technological, and economic impulse for the region and the international community. In the meantime, in a joint effort, the Softwarepark Hagenberg has grown to the current (2009) size of over 1000 R&D employees and 1300 students in six research institutions, 40 companies and 20 academic study programs on the bachelor, master's and PhD level. The goal of the Softwarepark Hagenberg is innovation of economy in one of the most important current technologies: software. It is the message of this book that this can only be achieved and guaranteed long term by "watering the root", namely emphasis on research, both basic and applied. In this book, we summarize what has been achieved in terms of research in the various research institutions in the Softwarepark Hagenberg and what research vision we have for the imminent future. When I founded the Softwarepark Hagenberg, in addition to the "watering the root" principle, I had the vision that such a technology park can only prosper if we realize the "magic triangle", i.e. the close interaction of research, academic education, and business applications at one site, see Figure 1.

## THE DEBATE OVER CORPORATE SOCIAL RESPONSIBILITY

---

Oxford University Press Should business strive to be socially responsible, and if so, how? The Debate over Corporate Social Responsibility updates and broadens the discussion of these questions by bringing together in one volume a variety of practical and theoretical perspectives on corporate social responsibility. It is perhaps the single most comprehensive volume available on the question of just how "social" business ought to be. The volume includes contributions from the fields of communication, business, law, sociology, political science, economics, accounting, and environmental studies. Moreover, it draws from experiences and examples from around the world, including but not limited to recent corporate scandals and controversies in the U.S. and Europe. A number of the chapters examine closely the basic assumptions underlying the philosophy of socially responsible business. Other chapters speak to the practical challenges and possibilities for corporate social responsibility in the twenty-first century. One of the most distinctive features of the book is its coverage of the very ways that the issue of corporate social responsibility has been defined, shaped, and discussed in the past four decades. That is, the editors and many of the authors are attuned to the persuasive strategies and formulations used to talk about socially responsible business, and demonstrate why the talk matters. For example, the book offers a careful analysis of how certain values have become associated with the business enterprise and how particular economic and political positions have been established by and for business. This book will be of great interest to scholars, business leaders, graduate students, and others interested in the contours of the debate over what role large-scale corporate commerce should take in the future of the industrialized world.

### 14TH INTERNATIONAL CONFERENCE ON HAND-ARM VIBRATION

---

---

#### ABSTRACTS

---

DGUV/IFA In May 2019, the Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung (IFA) was hosting the 14th International Conference on Hand-Arm-Vibration. The event is organised every four years under the auspices of international expert bodies at changing places. It is aimed at all stakeholders in the subject, whether experts from the occupational safety and health and research communities or management personnel in the areas of manufacture and design. Mechanized manual work is often associated with exposure to vibration that may impact adversely upon the health and well-being of the affected individuals. Besides impairments to comfort and performance, harm to the hand-arm system, possibly permanent, must be prevented as a matter of priority. In a world of work that is becoming more and more complex, combined exposures are also becoming increasingly relevant. What influence does hand-arm vibration have in conjunction with noise or whole-body vibration? What contribution can be made by medicine, diagnostics, epidemiology, measurement technology and prevention to the identification and containment of risks, and better still, to their elimination? What is the role of international regulatory activity in this context? The 14th International Conference on Hand-Arm Vibration aimed to address these and many other questions concerning hand-arm vibration, and to find answers relevant to the field.

### MEMORY AND SUBJECTIVITY IN COMIC ART

---

Univ. Press of Mississippi Autobiography has seen enormous expansions and challenges over the past decades. One of these expansions has been in comics, and it is an expansion that pushes back against any postmodern notion of the death of the author/subject, while also demanding new approaches from critics. Drawing from Life: Memory and Subjectivity in Comic Art is a collection of essays about autobiography, semiautobiography, fictionalized autobiography, memory, and self-narration in sequential art, or comics. Contributors come from a range of academic backgrounds including English, American studies, comparative literature, gender studies, art history, and cultural studies. The book engages with well-known figures such as Art Spiegelman, Marjane Satrapi, and Alison Bechdel; with cult-status figures such as Martin Vaughn James; and with lesser-known works by artists such as Frédéric Boilet. Negotiations between artist/writer/body and drawn/written/text raise questions of how comics construct identity, and are read and perceived, requiring a critical turn towards theorizing the comics' viewer. At stake in comic memoir and semi-autobiography is embodiment. Remembering a scene with the intent of rendering it in sequential art requires nonlinear thinking and engagement with physicality. Who was in the room and where? What was worn? Who spoke first? What images dominated the encounter? Did anybody smile? Man or mouse? Unhinged from the summary paragraph, the comics artist must confront the fact of the flesh, or the corporeal world, and they do so with fascinating results.
