The National Guide to Educational Credit for Training Programs 2003 Praeger For more than 25 years, this guide has been the trusted source of information on thousands of educational courses offered by business, labor unions, schools, training suppliers, professional and voluntary associations, and government agencies. These courses provide academic credit to students for learning acquired at such organizations as AT&T, Citigroup, Delta Air Lines, General Motors University, NETg, and Walt Disney World Resort. Each entry in the comprehensive **^National Guide^R** provides: ^L ^L ^DBL Course title^L ^DBL Location of all sites where the course is offered^L ^DBL Length in hours, days, or weeks^L ^DBL Period during which the credit recommendation applies^L ^DBL Purpose for which the course was designed^L ^DBL Learning outcomes^L ^DBL Teaching methods, materials, equipment, and major subject areas covered^L ^DBL College credit recommendations offered in four categories (by level of degrees) and expressed in semester hours and subject area(s) in which credit is applicable.^L ^L The introductory section includes ACE Transcript Service information. **Learning the Art of Electronics A Hands-On Lab Course Cambridge University Press** This introduction to circuit design is unusual in several respects. First, it offers not just explanations, but a full course. Each of the twenty-five sessions begins with a discussion of a particular sort of circuit followed by the chance to try it out and see how it actually behaves. Accordingly, students understand the circuit's operation in a way that is deeper and much more satisfying than the manipulation of formulas. Second, it describes circuits that more traditional engineering introductions would postpone: on the third day, we build a radio receiver; on the fifth day, we build an operational amplifier from an array of transistors. The digital half of the course centers on applying microcontrollers, but gives exposure to Verilog, a powerful Hardware Description Language. Third, it proceeds at a rapid pace but requires no

prior knowledge of electronics. Students gain intuitive understanding through immersion in good circuit design. Putting Renewables to Work How Many Jobs Can the Clean Energy Industry Generate? DIANE Publishing The New Apollo Energy Project, by coordinating public and private policies and investments, provides the vision for a cleaner, domestically-based, and more secure 21st century energy system. This report provides an invaluable comparison of the many recent studies that show how a shift towards clean energy technologies will result in significant job creation. These studies confirm that supporting renewable and efficient energy systems will create more American jobs than would a comparable investment in traditional fossil fuel based systems. Moreover, an investment agenda in emerging clean energy technologies would also reduce our foreign trade deficit and reestablish the U.S. as a leader in this growing international market.
