A MOTHER'S MANUAL FOR THE WOMEN OF FERRARA

A FIFTEENTH-CENTURY GUIDE TO PREGNANCY AND PEDIATRICS

The first treatise of its kind to be written in a European vernacular. Around 1460, Michele Savonarola produced the extraordinary Mother's Manual for the Women of Ferrara, a gynecological, obstetrical, and pediatric treatise composed in the vernacular so that it could be read not only by the learned but also by pregnant and nursing mothers and the midwives and wet nurses who presided over childbirth. Savonarola's work is not merely a trivial set of instructions, but the work of a learned scholar who drew on, among others, the ancient Greek physicians Hippocrates and Galen, and Avicenna's Canon of Medicine. The first of its kind, Savonarola's Mother's Manual helps readers understand both the development of late-medieval and early-modern obstetrics and gynecology, as well as the experiences of women who turn to advice books for help with reproductive issues. This book also provides a key to understanding why and how a new genre of book--the midwifery manual or advice book for pregnant women--arose in sixteenth-century Italy and eventually became a popular genre all over Europe from the early modern period to the present day.

TEACHERS' GUIDE FOR PREGNANCY, CHILDBIRTH, AND THE NEWBORN

A MANUAL FOR RURAL MIDWIVES

MANUAL FOR TEACHING MIDWIVES (CLASSIC REPRINT)

Forgotten Books Excerpt from Manual for Teaching Midwives This manual was prepared by Anita M. Jones, R. N nurse-midwife, assistant director of the Maternity Center Association, New York City, for the use of nurse-midwives and others responsible for the supervision and instruction of untrained midwives under the auspices of State and local health departments, to teach them: (1) to use aseptic techniques; (2) never to interfere with the delivery of the baby; (3) to call the doctor at the first sign of danger. As the number of women being delivered by untrained midwives, though considerable, is reported to be steadily decreasing, this plan of instruction for midwives is directed only toward meeting the acute need for improving the standards of the untrained midwives now practicing until they can be replaced by nurse-midwives or physicians. Thus it may have a place in improving the maternity care offered in a transition period, while efforts continue toward putting into practice throughout the United States a standard of maternity care that calls for skilled medical and nursing services for every mother, or at least the services of the nurse-midwife in localities for which it is not practicable to provide skilled medical services. It is hoped that this manual will assist the nurse-midwife in the technical teaching and supervision which she gives to the practicing mid wives who have not had special training and preparation. It is not in any way a textbook on midwifery, nor can the classes for midwives that are based on it be considered as courses in midwifery. It is written simply, with frequent use of colloquial terms, so that the nurse-midwife will be able to present her instructions in language that the midwife will understand - the midwife who is without training and without formal education, who often can neither read nor write.
