## Burma's Spring

978-1-910198-30-8 Burma's Spring documents the struggles of ordinary people made extraordinary by circumstance. Rosalind Russell, a British journalist who came to live in Burma with her family, witnessed a time of unprecedented change in a secretive country that had been locked under military dictatorship for half a century. Her memoir carries the reader through a turbulent era of uprising, disaster and political awakening with a vivid retelling of her encounters as an undercover reporter. From the world famous democracy leader Aung San Suu Kyi to the broken-hearted domestic worker Mu Mu, a Buddhist monk to a punk, a palm reader to a girl band, these are stories of tragedy, resilience and hope - woven together in a vivid portrait of a land for so long hidden from view. "A vibrant and comprehensive depiction ... an affectionate, colourful book." Rt. Hon. John Bercow "An extraordinarily beautiful, comprehensive and compelling story ... essential reading for anyone interested in understanding Burma today." Benedict Rogers, author of Burma: A Nation at the Crossroads "Burma's Spring is like nothing else written about Burma ... compelling, charming and unique. ### RCA Labs to Sarnoff Corporation

Arcadia Publishing Color television, transistors, lasers, digital memory, computers, liquid-crystal displays, medical electronics, and digital video-these technologies define modern civilization. David Sarnoff Research Center: RCA Labs to Sarnoff Corporation tells the story of their invention or innovation at this Princeton, New Jersey research facility. The center's engineers, physicists, chemists, technicians, and shop workers developed radar, sonar, and TV-guided missiles during World War II. In 1951, RCA renamed the labs for its visionary leader, David Sarnoff, and the center continued its groundbreaking work for RCA's product divisions and patent-licensing department. General Electric bought RCA in 1986 and donated the David Sarnoff Research Center to SRI International, a nonprofit research institute. Ten years later, the center became Sarnoff Corporation, a company that provides innovative client solutions, licenses patents, starts companies, and sells products. David Sarnoff Research Center: RCA Labs to Sarnoff Corporation celebrates the fascinating process of research and development with stunning photographs selected from thirty thousand stills in RCA's collections now held at the David Sarnoff Library. Masterfully framed and lighted, these rare images reflect American confidence in the promise of technology at its twentieth-century peak and illustrate a sometimes unusual world within a social life of awards, gardens, picnics, and sports teams.

## The Suit

### A Machiavellian Approach to Men's Style

HarperBusiness "Clothes make the man." Mark Twain never worked in today's fast-paced workplace, but his observation has never been keener: clothes do make the man. With The Suit, Nicholas Antongiavanni provides a masterly manual on what it takes to succeed: advice on how to dress with style, flair, and an eye toward gaining power. That's because "business casual" has proved itself a one-way ticket to a lifetime in the corporate dungeon. But if you apply the sartorial advice proffered in The Suit to your clothes, you will project elegance, bravado, and success. Drawing inspiration from Machiavelli's The Prince, Antongiavanni has crafted an essential handbook for the ambitious man who recognizes that smart and stylish appearance is a lever to power. From neckties to footwear, belts to suspenders, lapels to handkerchiefs, The Suit leaves no garment or accessory untouched and will inject a dose of good taste into your closet. The debates over double-breasted vs. single, two-buttons vs. three, English vs. Italian, and many others are settled with wit by Antongiavanni's wealth of knowledge in the art of dress. The Suit is much more than a simple how-to manual -- Antongiavanni packs these pages with insightful and sometimes stinging commentary on celebrities and the clothes they wear. Leading public figures from David Letterman to Donald Rumsfeld are picked apart at the seams. Antongiavanni uses powerful men in the public eye as entertaining examples of how to dress properly and what garish mistakes to avoid. Whether you are already a corporate Prince -- or if you are a Joe Cubicle aspiring to be something greater -- The Suit will teach you how to make your clothes work for you. No matter what your physical build or your status in the workplace, let Nicholas Antongiavanni be your fashion consultant.

### Owen D. Young and American Enterprise

#### A Biography

David R. Godine Publisher A large-scale biography of a major figure in American enterprise, the man who built General Electric and founded the Radio Corporation of America. Owen D. Young belonged to a unique American generation: the last to know a country where the majority made their living from the land and the first to feel the full impact of modernization. Born on an upstate New York farm, educated at St. Lawrence, a small college nearby, and armed with a Boston University law degree, Young made a large difference in that transforming change. His early career was with the new and sprawling utilities, and brought him to the attention of the General Electric Company. Joining it in 1913 as vice president and general counsel, and becoming chairman in 1922, with Gerard Swope as president, he soon transformed, with Swope's impressive aid, a large national enterprise into a dominant international one. They were a singularly effective team, enterprising at home and abroad, and notably progressive in labor relations. Always the entrepreneur, Young saw the possibilities of the 'wireless' and so set up the Radio Corporation of America. This is a life of a titan of business, built on the classical pattern of American success.

### Heavy Weather Avoidance and Route Design

#### Concepts and Applications of 500 MB Charts

Paradise Cay Publications In Heavy Weather Avoidance, Chen and Chesneau merge the seamanship of a master mariner and the forecast expertise of a senior meteorologist, providing readers with double-barrel exposure to what actually goes on in the atmosphere and on the sea's surface. Mariners and recreational sailors are more concerned about the implications of volatile weather rather than its fluid dynamics. From start to finish the authors have cut to the chase, creating a readable text brimming with useful graphics. It's focused on the root cause of how and why bad weather develops and where it's likely to go. There's enough theory provided for a reader to get a feel for how air mass energy transfer works, but just as the theoretical aspect takes on a mission of its own, there's a shift to more practical self-forecasting and storm avoidance wisdom. Captain Ma-Li Chen shares his well-tested routing strategy and describes how it factors in the use of the 500 Mb chart.

## Half-Hull Modeling

### Step-By-step Companion, from Plans to Finished Model

Long before half-hull models became a staple of marine museums and living room walls, they were an essential tool for marine designers and shipbuilders alike. Indeed, the models offered not only a three-dimensional scale rendering of the completed vessel but also a set of comprehensive construction plans for the shipwright. Even in these days of CAD and 3-D printers, the model can still serve today's builders by offering the opportunity to see what they are getting into and what the lines on their blueprints are actually saying. For the boat owner (or prospective boat owner), building a model can be a great way to spend some cold winter evenings carving an accurate and handsome rendition of the boat of their dreams. Half-Hull Modeling takes the reader through the entire process of making an accurate half model: history, tools, woods, safety, finishes, construction jigs, interpreting and working with lines plans, patternmaking, and constructing both waterline and buttock lift models. For those who already own a classic model and would like to build a replica, the book also offers instructions on how to build a measuring device to capture the lines of a hull and develop a set of lines plans.
