Dream Games The Art of Robert Schwartz Selections The San Jose Museum of Art Permanent Collection Art in America Of Dogs and Other People The Art of Roy De Forest Univ of California Press "Roy De Forest's brightly colored, crazy-quilted jungles dotted with nipples of paint and inhabited by a cast of characters uniquely his own (a perennial favorite being his wild-eyed, pointy-eared dogs) appeal to a broad spectrum of viewers from young to old, from the casual visitor to the most sophisticated art aficionado. OMCA's project aims to reassess De Forest's art-historical position, placing him in a national rather than solely regional/West Coast context. Landauer positions De Forest as part of a bicoastal alternative current of American art that has been poorly documented and deliberately ran counter to better publicized tendencies of the 1960s and 1970s, notably Pop, Minimalism, and post-painterly abstraction. Despite the playfulness of his work, close study of De Forest's art reveals deep layers of meaning. He was a fan of popular science fiction and adventure stories, but he was also well versed in Australian aboriginal art, ukiyo-e prints, poetry, literature, and the history of philosophy. He enjoyed secreting obscure art-historical references into his work: animals might assume postures found in Medieval or Renaissance art, or a drawing that appears to depict a comic-book character may in fact refer to Titian's triple-headed allegory of Prudence. This engaging publication presents gorgeous color reproductions of 150 of De Forest's finest artworks, plus a variety of figure illustrations that illuminate the artist's diverse sources and freewheeling social and creative milieu in Northern California."--Provided by publisher. **More Work For Mother The Ironies Of Household Technology From The Open Hearth To The Microwave Basic Books** In this classic work of women's history (winner of the 1984 Dexter Prize from the Society for the History of Technology), Ruth Schwartz Cowan shows how and why modern women devote as much time to housework as did their colonial sisters. In lively and provocative prose, Cowan explains how the modern conveniences—washing machines, white flour, vacuums, commercial cotton—seemed at first to offer working-class women middle-class standards of comfort. Over time, however, it became clear that these gadgets and gizmos mainly replaced work previously conducted by men, children, and servants. Instead of living lives of leisure, middle-class women found themselves struggling to keep up with ever higher standards of cleanliness. **The Oxford Handbook of Global Modernisms Oxford University Press** The Oxford Handbook of Global Modernisms expands the scope of modernism beyond its traditional focus on English and Irish literature to explore the contributions of artists from countries and regions like the US, Cuba, Spain, the Balkans, China, Japan, India, Vietnam, and Nigeria. **Survey of the State of the Art in Human Language Technology Cambridge University Press** Languages, in all their forms, are the more efficient and natural means for people to communicate. Enormous quantities of information are produced, distributed and consumed using languages. Human language technology's main purpose is to allow the use of automatic systems and tools to assist humans in producing and accessing information, to improve communication between humans, and to assist humans in communicating with machines. This book, sponsored by the Directorate General XIII of the European Union and the Information Science and Engineering Directorate of the National Science Foundation, USA, offers the first comprehensive overview of the human language technology field. **Touching Photographs University of Chicago Press** Photography does more than simply represent the world. It acts in the world, connecting people to form relationships and shaping relationships to create communities. In this beautiful book, Margaret Olin explores photography's ability to "touch" us through a series of essays that shed new light on photography's role in the world. Olin investigates the publication of photographs in mass media and literature, the hanging of exhibitions, the posting of photocopied photographs of lost loved ones in public spaces, and the intense photographic activity of tourists at their destinations. She moves from intimate relationships between viewers and photographs to interactions around larger communities, analyzing how photography affects the way people handle cataclysmic events like 9/11. Along the way, she shows us James VanDerZee's Harlem funeral portraits, dusts off Roland Barthes's family album, takes us into Walker Evans and James Agee's photo-text *Let Us Now Praise Famous Men*, and logs onto online photo albums. With over one hundred illustrations, *Touching Photographs* is an insightful contribution to the theory of photography, visual studies, and art history. **Human-Machine Reconfigurations Plans and Situated Actions Cambridge University Press** Publisher description **Gustav Landauer: Anarchist and Jew Walter de Gruyter GmbH & Co KG** For Gustav Landauer, literary critic and anarchist, participant of the Bavarian revolution and scholar of mysticism, culture and politics occupied the same spiritual space. While identifying with ethical socialism, his Jewish sensibility increasingly gained over the years, not only, but in great measure due to Buber's influence. This volume assesses Landauer's literary and political activities, paying particular attention to his impact on Buber. **Funology From Usability to Enjoyment Springer Science & Business Media** This book reflects the move in Human Computer Interaction studies from standard usability concerns towards a wider set of problems to do with fun, enjoyment, aesthetics and the experience of use. Traditionally HCI has been concerned with work and task based applications but as

digital technologies proliferate in the home fun becomes an important issue. There is an established body of knowledge and a range of techniques and methods for making products and interfaces usable, but far less is known about how to make them enjoyable. Perhaps in the future there will be a body of knowledge and a set of techniques for assessing the pleasure of interaction that will be as thorough as those that currently assess usability. This book is a first step towards that. It brings together a range of researchers from academia and industry to provide answers. Contributors include Alan Dix, Jacob Nielsen and Mary Beth Rosson as well as a number of other researchers from academia and industry. **Elmer Bischoff The Ethics of Paint Univ of California Press** A major new biography of the great San Francisco Bay area artist chronicles the life, art, and teaching career of the Abstract Expressionist painter. **Simultaneous. Representation Learning for Natural Language Processing Springer Nature** This open access book provides an overview of the recent advances in representation learning theory, algorithms and applications for natural language processing (NLP). It is divided into three parts. Part I presents the representation learning techniques for multiple language entries, including words, phrases, sentences and documents. Part II then introduces the representation techniques for those objects that are closely related to NLP, including entity-based world knowledge, sememe-based linguistic knowledge, networks, and cross-modal entries. Lastly, Part III provides open resource tools for representation learning techniques, and discusses the remaining challenges and future research directions. The theories and algorithms of representation learning presented can also benefit other related domains such as machine learning, social network analysis, semantic Web, information retrieval, data mining and computational biology. This book is intended for advanced undergraduate and graduate students, post-doctoral fellows, researchers, lecturers, and industrial engineers, as well as anyone interested in representation learning and natural language processing. **The Cambridge History of Judaism: Volume 2, The Hellenistic Age Cambridge University Press** Vol. 4 covers the late Roman period to the rise of Islam. Focuses especially on the growth and development of rabbinic Judaism and of the major classical rabbinic sources such as the Mishnah, Jerusalem Talmud, Babylonian Talmud and various Midrashic collections. **The Art of Assemblage** "Assemblage art consists of making three-dimensional or two-dimensional artistic compositions by putting together found-objects."--Boundless. **California Impressionists Univ of California Press** The years around the turn of the century were a dynamic time in American art. Different and seemingly contradictory movements were evolving, and the dominant style that emerged during this period was Impressionism. Based in part on the broken brushwork and high-keyed palette of Claude Monet, it was a form especially suited to the dramatic landscape and shimmering light of California. American Impressionism grew in popularity as artists from across the nation migrated to the Golden State. There they created a remarkable style, often referred to as California plein-air painting, combining several aspects of American and European art and capturing the brilliant mix of color and light that defined California. This book celebrates forty Impressionist painters who worked in California from 1900 through the beginning of the Great Depression. A joint effort of The Irvine Museum and the Georgia Museum of Art, it includes widely recognized California artists such as Maurice Braun and Guy Rose, less well known artists such as Mary DeNeale Morgan and Donna Schuster, and eastern painters who worked briefly in the region, such as Childe Hassam and William Merritt Chase. The contributors' essays examine the socioeconomic forces that shaped this art movement, as well as the ways in which the art reflected California's self-cultivated image as a healthful, sun-splashed arcadia. Beautifully illustrated, with 72 full-color plates, California Impressionists recreates the vibrant splendor of a unique period in American art. **Human Health and Performance Risks of Space Exploration Missions Evidence Reviewed by the NASA Human Research Program U. S. National Aeronautics & Space Administration The Not-So-Still Life A Century of California Painting and Sculpture Univ of California Press** "Presenting, interpreting, and celebrating the world-renowned and the lesser-known California artists who have uniquely defined and redefined the still life, this volume offers an exploration of the sensual pleasures, the aesthetic challenges, and the intellectual and perceptual associations of a century of art through the prism of a single genre."--BOOK JACKET. **Queering Anarchism Addressing and Undressing Power and Desire AK Press** "A much-needed collection that thinks through power, desire, and human liberation. These pieces are sure to raise the level of debate about sexuality, gender, and the ways that they tie in with struggles against our ruling institutions."?Roxanne Dunbar-Ortiz, *Outlaw Woman* "Against the austerity of straight politics, Queering Anarchism sketches the connections between gender mutiny, queer sexualities, and anti-authoritarian desires. Through embodied histories and incendiary critique, the contributors gathered here show how we must not stop at smashing the state; rather normativity itself is the enemy of all radical possibility."—Eric A. Stanley, co-editor of *Captive Genders* What does it mean to "queer" the world around us? How does the radical refusal of the mainstream codification of GLBT identity as a new gender norm come into focus in the context of anarchist theory and practice? How do our notions of orientation inform our politics?and vice versa? Queering Anarchism brings together a diverse set of writings ranging from the deeply theoretical to the playfully personal that explore the possibilities of the concept of "queering," turning the dominant, and largely heteronormative, structures of belief and identity entirely inside out. Ranging in topic from the economy to disability, politics, social structures, sexual practice, interpersonal relationships, and beyond, the authors here suggest that queering might be more than a set of personal preferences?pointing toward the possibility of an entirely new way of viewing the world. Contributors include Jamie Heckert, Sandra Jeppesen, Ben Shepard, Ryan Conrad, Jerimarie Liesegang, Jason Lydon, Susan Song, Stephanie Grohmann, Liat Ben-Moshe, Anthony J. Nocella, A.J. Withers, and more. Deric Shannon, C.B. Daring, J. Rogue, and Abbey Volcano are anarchists and activists who work in a wide variety of radical, feminist, and queer communities across the United States. **Transhumanism - Engineering the Human Condition History, Philosophy and Current Status Springer** This book is designed to offer a comprehensive high-level introduction to transhumanism, an international political and cultural movement that aims to produce a "paradigm shift" in our ethical and political understanding of human evolution. Transhumanist thinkers want the human species to take the course of evolution into its own hands, using advanced technologies currently under development - such as robotics, artificial intelligence, biotechnology, cognitive neurosciences, and nanotechnology - to overcome our present physical and mental limitations, improve our intelligence beyond the current maximum achievable level, acquire skills that are currently the preserve of other species, abolish involuntary aging and death, and ultimately achieve a post-human level of existence. The book covers transhumanism from a historical, philosophical, and scientific viewpoint, tracing its cultural roots, discussing the main philosophical, epistemological, and ethical issues, and reviewing the state of the art in scientific research on the topics of most interest to transhumanists. The writing style is clear and accessible for the general reader, but the book will also appeal to graduate and undergraduate students. **Small Press Record of Books in Print Benjamin's Library Modernity, Nation, and the Baroque Cornell University Press and Cornell University Library** In Benjamin's Library, Jane O. Newman offers, for the

first time in any language, a reading of Walter Benjamin's notoriously opaque work, *Origin of the German Tragic Drama* that systematically attends to its place in discussions of the Baroque in Benjamin's day. Taking into account the literary and cultural contexts of Benjamin's work, Newman recovers Benjamin's relationship to the ideologically loaded readings of the literature and political theory of the seventeenth-century Baroque that abounded in Germany during the political and economic crises of the Weimar years. To date, the significance of the Baroque for *Origin of the German Tragic Drama* has been glossed over by students of Benjamin, most of whom have neither read it in this context nor engaged with the often incongruous debates about the period that filled both academic and popular texts in the years leading up to and following World War I. Armed with extraordinary historical, bibliographical, philological, and orthographic research, Newman shows the extent to which Benjamin participated in these debates by reconstructing the literal and figurative history of sixteenth- and seventeenth-century books that Benjamin analyzes and the literary, art historical and art theoretical, and political theological discussions of the Baroque with which he was familiar. In so doing, she challenges the exceptionalist, even hagiographic, approaches that have become common in Benjamin studies. The result is a deeply learned book that will infuse much-needed life into the study of one of the most influential thinkers of the twentieth century. **Arts & Humanities Citation Index** A multidisciplinary index covering the journal literature of the arts and humanities. It fully covers 1,144 of the world's leading arts and humanities journals, and it indexes individually selected, relevant items from over 6,800 major science and social science journals. **Optical Metamaterials Fundamentals and Applications Springer Science & Business Media** Metamaterials—artificially structured materials with engineered electromagnetic properties—have enabled unprecedented flexibility in manipulating electromagnetic waves and producing new functionalities. This book details recent advances in the study of optical metamaterials, ranging from fundamental aspects to up-to-date implementations, in one unified treatment. Important recent developments and applications such as superlens and cloaking devices are also treated in detail and made understandable. The planned monograph can serve as a very timely book for both newcomers and advanced researchers in this extremely rapid evolving field. **The Design of Everyday Things Revised and Expanded Edition Basic Books (AZ)** Even the smartest among us can feel inept as we fail to figure out which light switch or oven burner to turn on, or whether to push, pull, or slide a door. The fault, argues this ingenious—even liberating—book, lies not in ourselves, but in product design that ignores the needs of users and the principles of cognitive psychology. The problems range from ambiguous and hidden controls to arbitrary relationships between controls and functions, coupled with a lack of feedback or other assistance and unreasonable demands on memorization. *The Design of Everyday Things* shows that good, usable design is possible. The rules are simple: make things visible, exploit natural relationships that couple function and control, and make intelligent use of constraints. The goal: guide the user effortlessly to the right action on the right control at the right time. In this entertaining and insightful analysis, cognitive scientist Don Norman hails excellence of design as the most important key to regaining the competitive edge in influencing consumer behavior. Now fully expanded and updated, with a new introduction by the author, *The Design of Everyday Things* is a powerful primer on how—and why—some products satisfy customers while others only frustrate them. **Legal Informatics Cambridge University Press** This cutting-edge volume offers a theoretical and applied introduction to the emerging legal technology and informatics industry. **Perceiving, Acting and Knowing Toward an Ecological Psychology Routledge** Originally published in 1977, the chapters in this volume derive from a conference on *Perceiving, Acting and Knowing* held by the Center for Research in Human Learning at the University of Minnesota in 1973. The volume was intended to appeal, not just to the specialist or the novice, but to anyone sufficiently interested in psychology to have obtained a sense of its history at the time. Through these essays the authors express a collective attitude that a careful scrutiny of the fundamental tenets of contemporary psychology may be needed. In some essays specific faults in the foundations of an area are discussed, and suggestions are made for remedying them. In other essays the authors flirt with more radical solutions, namely, beginning from new foundations altogether. Although the authors do not present a monolithic viewpoint, a careful reading of all their essays under one cover reveals a glimpse of a new framework by which theory and research may be guided. **The San Francisco School of Abstract Expressionism** "This well written, fully researched, and handsomely illustrated volume gives potent new life to artists and ideas nearly lost to American art history. Susan Landauer's enlightening book will play an important role in redefining the post-World War II avant-garde as a national rather than an East Coast phenomenon."--Henry T. Hopkins, University of California, Los Angeles "This book ranks as one of the more important recent contributions to the history of postwar American art."--Caroline Jones, Boston University **A History of Psychology Globalization, Ideas, and Applications Routledge** This book presents the view of psychology as a global enterprise, the development of which is moderated by the dynamic tension between the move toward globalization and concomitant local forces. It describes the broader intellectual and social context within which psychology has developed. **Engineering a Better Future Interplay between Engineering, Social Sciences, and Innovation Springer** This open access book examines how the social sciences can be integrated into the praxis of engineering and science, presenting unique perspectives on the interplay between engineering and social science. Motivated by the report by the Commission on Humanities and Social Sciences of the American Association of Arts and Sciences, which emphasizes the importance of social sciences and Humanities in technical fields, the essays and papers collected in this book were presented at the NSF-funded workshop 'Engineering a Better Future: Interplay between Engineering, Social Sciences and Innovation', which brought together a singular collection of people, topics and disciplines. The book is split into three parts: A. Meeting at the Middle: Challenges to educating at the boundaries covers experiments in combining engineering education and the social sciences; B. Engineers Shaping Human Affairs: Investigating the interaction between social sciences and engineering, including the cult of innovation, politics of engineering, engineering design and future of societies; and C. Engineering the Engineers: Investigates thinking about design with papers on the art and science of science and engineering practice. **Surrealist sabotage and the war on work Manchester University Press** In *Surrealist sabotage and the war on work*, art historian Abigail Susik uncovers the expansive parameters of the international surrealist movement's ongoing engagement with an aesthetics of sabotage between the 1920s and the 1970s, demonstrating how surrealists unceasingly sought to transform the work of art into a form of unmanageable anti-work. In four case studies devoted to surrealism's transatlantic war on work, Susik analyses how artworks and texts by Man Ray, André Breton, Simone Breton, André Thirion, Óscar Domínguez, Konrad Klapheck, and the Chicago surrealists, among others, were pivotally impacted by the intransigent surrealist concepts of principled work refusal, permanent strike, and autonomous pleasure. Underscoring surrealism's profound relevance for readers engaged in ongoing debates about gendered labour and the wage gap, endemic over-work and exploitation, and the vicissitudes of knowledge

work and the gig economy, Surrealist sabotage and the war on work reveals that surrealism's creative work refusal retains immense relevance in our wired world. **National Historic Preservation Act of 1966, as Amended Cognitive Science An Introduction to the Study of Mind SAGE Publications** Cognitive Science provides a comprehensive introduction to the field from multiple perspectives to help readers better understand and answer questions about the mysteries of the mind. In each chapter, the authors focus on a particular area in cognitive science, exploring methodologies, theoretical perspectives, and findings, then offering the critical evaluations and conclusions drawn from them. Substantially updated with new and expanded content, the Third Edition reflects the latest research in this rapidly evolving field. **Design Recommendations for Intelligent Tutoring Systems Volume 2 - Instructional Management U.S. Army Research Laboratory** Design Recommendations for Intelligent Tutoring Systems explores the impact of intelligent tutoring system design on education and training. Specifically, this volume examines "Instructional Management" techniques, strategies and tactics, and identifies best practices, emerging concepts and future needs to promote efficient and effective adaptive tutoring solutions. Design recommendations include current, projected, and emerging capabilities within the Generalized Intelligent Framework for Tutoring (GIFT), an open source, modular, service-oriented architecture developed to promote simplified authoring, reuse, standardization, automated instructional management and analysis of tutoring technologies. **Anarchy in Action** The argument of this book is that an anarchist society, a society which organises itself without authority, is always in existence. Through a wide-ranging analysis - drawing on examples from education, urban planning, welfare, housing, the environment, the workplace, and the family, to name but a few - Colin Ward demonstrates that the roots of anarchist practice are not so alien or quixotic as they might at first seem but lie precisely in the ways that people have always tended to organise themselves when left alone to do so. **Twelve Years a Slave Prabhat Prakashan** "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt **Beyond Education Radical Studying for Another World U of Minnesota Press** A bold call to deromanticize education and reframe universities as terrains of struggle between alternative modes of studying and world-making Higher education is at an impasse. Black Lives Matter and #MeToo show that racism and sexism remain pervasive on campus, while student and faculty movements fight to reverse increased tuition, student debt, corporatization, and adjunctification. Commentators typically frame these issues as crises for an otherwise optimal mode of intellectual and professional development. In *Beyond Education*, Eli Meyerhoff instead sees this impasse as inherent to universities, as sites of intersecting political struggles over resources for studying. Meyerhoff argues that the predominant mode of study, education, is only one among many alternatives and that it must be deromanticized in order to recognize it as a colonial-capitalist institution. He traces how key elements of education—the vertical trajectory of individualized development, its role in preparing people to participate in governance through a pedagogical mode of accounting, and dichotomous figures of educational waste (the "dropout") and value (the "graduate")—emerged from histories of struggles in opposition to alternative modes of study bound up with different modes of world-making. Through interviews with participants in contemporary university struggles and embedded research with an anarchist free university, *Beyond Education* paves new avenues for achieving the aims of an "alter-university" movement to put novel modes of study into practice. Taking inspiration from Black Lives Matter, Occupy Wall Street, and Indigenous resurgence projects, it charts a new course for movements within, against, and beyond the university as we know it. **Digital Games in Language Learning and Teaching Springer** This edited volume explores how digital games have the potential to engage learners both within and outside the classroom and to encourage interaction in the target language. This is the first dedicated collection of papers to bring together state-of-the-art research in game-based learning. **The Psychology of Everyday Things Basic Books** **The Sixties Years of Hope, Days of Rage Bantam** Say "the Sixties" and the images start coming, images of a time when all authority was defied and millions of young Americans thought they could change the world—either through music, drugs, and universal love or by "putting their bodies on the line" against injustice and war. Todd Gitlin, the highly regarded writer, media critic, and professor of sociology at the University of California, Berkeley, has written an authoritative and compelling account of this supercharged decade—a decade he helped shape as an early president of Students for a Democratic Society (SDS) and an organizer of the first national demonstration against the Vietnam war. Part critical history, part personal memoir, part celebration, and part meditation, this critically acclaimed work resurrects a generation on all its glory and tragedy.
