SOUND TO SENSE, SENSE TO SOUND

A STATE OF THE ART IN SOUND AND MUSIC COMPUTING

Logos Verlag Berlin GmbH Since the 1950's, Sound and Music Computing (SMC) research has been producing a profound impact on the development of culture and technology in our post-industrial society. SMC research approaches the whole sound and music communication chain from a multidisciplinary point of view. By combining scientific, technological and artistic methodologies it aims at understanding, modelling, representing and producing sound and music using computational approaches. This book, by describing the state of the art in SMC research, gives hints of future developments, whose general purpose will be to bridge the semantic gap, the hiatus that currently separates sound from sense and sense from sound.

THINKING IN THE DARK

CINEMA, THEORY, PRACTICE

Rutgers University Press Today's film scholars draw from a dizzying range of theoretical perspectives—they're just as likely to cite philosopher Gilles Deleuze as they are to quote classic film theorist André Bazin. To students first encountering them, these theoretical lenses for viewing film can seem exhilarating, but also overwhelming. Thinking in the Dark introduces readers to twenty-one key theorists whose work has made a great impact on film scholarship today, including Rudolf Arnheim, Sergei Eisenstein, Michel Foucault, Siegfried Kracauer, and Judith Butler.

Rather than just discussing each theorist's ideas in the abstract, the book shows how those concepts might be applied when interpreting specific films by including an analysis of both a classic film and a contemporary one. It thus demonstrates how theory can help us better appreciate films from all eras and genres: from Hugo to *Vertigo*, from *City Lights* to *Sunset Blvd.*, and from *Young Mr. Lincoln* to *A.I.* and *Wall-E*. The volume's contributors are all experts on their chosen theorist's work and, furthermore, are skilled at explaining that thinker's key ideas and terms to readers who are not yet familiar with them. *Thinking in the Dark* is not only a valuable resource for teachers and students of film, it's also a fun read, one that teaches us all how to view familiar films through new eyes. Theorists examined in this volume are: Rudolf Arnheim, Béla Balázs, Roland Barthes, André Bazin, Walter Benjamin, Judith Butler, Stanley Cavell, Michel Chion, Gilles Deleuze, Jean Douchet, Sergei Eisenstein, Jean Epstein, Michel Foucault, Siegfried Kracauer, Jacques Lacan, Vachel Lindsay, Christian Metz, Hugo Münsterberg, V. F. Perkins, Jacques Rancière, and Jean Rouch.

CONTEMPORARY FILM MUSIC

INVESTIGATING CINEMA NARRATIVES AND COMPOSITION

Springer The purpose of this book, through its very creation, is to strengthen the dialogue between practitioner and theorist. To that end, a film academic and musicologist have collaborated as editors on this book, which is in turn comprised of interviews with composers alongside complementary chapters that focus on a particular feature of the composer's approach or style. These chapters are written by a fellow composer, musicologist, or film academic who specializes in that element of the composer's output. In the interview portions of this book, six major film composers discuss their work from the early 1980s to the present day: Carter Burwell, Mychael Danna, Dario Marianelli, Rachel Portman, Zbigniew Preisner, and A.R. Rahman. The focus is on the practical considerations of film composition, the relationship each composer has with the moving image, narrative, technical considerations, personal motivations in composing, the relationships composers have with their directors, and their own creative processes. *Contemporary Film Music* also explores the contemporary influence of electronic music, issues surrounding the mixing of soundtracks, music theory, and the evolution of each composer's musical voice.

SPACE AND BEING IN CONTEMPORARY FRENCH CINEMA

Manchester University Press This book brings together for the first time five French

directors who have established themselves as among the most exciting and significant working today: Bruno Dumont, Robert Guédiguian, Laurent Cantet, Abdellatif Kechiche, and Claire Denis. Whatever their chosen habitats or shifting terrains, each of these highly distinctive auteurs has developed unique strategies of representation and framing that reflect a profound investment in the geophysical world. The book proposes that we think about cinematographic space in its many different forms simultaneously (screenspace, landscape, narrative space, soundscape, spectatorial space). Through a series of close and original readings of selected films, it posits a new 'space of the cinematic subject'. Accessible and wide-ranging, this volume opens up new areas of critical enquiry in the expanding interdisciplinary field of space studies. It will be of immediate interest to students and researchers working not only in film studies and film philosophy, but also in French/Francophone studies, postcolonial studies, gender and cultural studies. SILENCE, MUSIC, SILENT MUSIC

Routledge The contributions in this volume focus on the ways in which silence and music relate, contemplate each other and provide new avenues for addressing and gaining understanding of various realms of human endeavour. The book maps out this little-explored aspect of the sonic arena with the intention of defining the breadth of scope and to introduce interdisciplinary paths of exploration as a way forward for future discourse. Topics addressed include the idea of 'silent music' in the work of English philosopher Peter Sterry and Spanish Jesuit St John of the Cross; the apparently paradoxical contemplation of silence through the medium of music by Messiaen and the relationship between silence and faith; the aesthetics of Susan Sontag applied to Cage's idea of silence; silence as a different means of understanding musical texture; ways of thinking about silences in music produced during therapy sessions as a form of communication; music and silence in film, including the idea that music can function as silence; and the function of silence in early chant. Perhaps the most all-pervasive theme of the book is that of silence and nothingness, music and spirituality: a theme that has appeared in writings on John Cage but not, in a broader sense, in scholarly writing. The book reveals that unexpected concepts and ways of thinking emerge from looking at sound in relation to its antithesis, encompassing not just Western art traditions, but the relationship between music, silence, the human psyche and sociological trends - ultimately, providing deeper understanding of the elemental places both music and silence hold within world philosophies and fundamental states of being. *Silence, Music, Silent Music* will appeal to those working in the fields of musicology, psychology of religion, gender studies, aesthetics and philosophy.

LE PROCESSUS PSYCHOSOMATIQUE

Lulu.com Ce livre vous invite à explorer les profondeurs de l'inconscient pour déterminer les bases du fonctionnement psychosomatique de l'être humain. Sur le plan physique à partir de l'étude du cerveau et des fonctions neurophysiologiques. Sur le plan psychique, en reprenant les bases du fonctionnement psychologique. La synthèse psychosomatique s'opère ensuite à travers les circuits électromagnétiques du corps humain. Pour justifier ses propos, l'auteur se réfère également à différentes sources traditionnelles, telles les méridiens d'acupuncture, la cabale ou l'astrologie. Il démontre ainsi que la fusion psychosomatique représente à la fois la source et la finalité du processus vital. Cet essai magistral aboutit à une définition de l'être humain qui intègre les aspects physiques et psychiques de la personnalité en une synthèse énergétique unique, à l'intérieur de laquelle s'opère la relation psychosomatique.

AUTOMATING VISION

THE SOCIAL IMPACT OF THE NEW CAMERA CONSCIOUSNESS

Routledge Automating Vision explores the rise of seeing machines through four case studies: facial recognition, drone vision, mobile and locative media and driverless cars. Proposing a conceptual lens of camera consciousness, which is drawn from the early visual anthropology of Gregory Bateson and Margaret Mead, Automating Vision accounts for the growing power and value of camera technologies and digital image processing. Behind the smart camera devices examined throughout the book lies a set of increasingly integrated and automated technologies underpinned by artificial intelligence, machine learning and image processing. Seeing machines are now implicated in growing visual data markets and are supported by emerging layers of infrastructure that they coproduce. In this book, Anthony McCosker and Rowan Wilken address the social impacts, the disruptions and reconfigurations to existing digital media ecosystems, to urban environments and to mobility and social relations that result from the increasing automation of vision and explore how it might be possible to ensure a safe and equitable future as we learn to see with and negotiate the interventions of seeing machines. This book will appeal to students and scholars in media, communication, cultural studies, sociology of media and science and technology studies.

"WOMEN, FEMININITY AND PUBLIC SPACE IN EUROPEAN VISUAL CULTURE, 1789-1914 "

Routledge Focusing on images of or produced by well-to-do nineteenth-century European women, this volume explores genteel femininity as resistant to easy codification vis-à-vis the public. Attending to various iterations of the public as space, sphere and discourse, sixteen essays challenge the false binary construct that has held the public as the sole preserve of prosperous men. By contrast, the essays collected in *Women, Femininity and Public Space in European Visual Culture, 1789-1914* demonstrate that definitions of both femininity and the public were mutually defining and constantly shifting. In examining the relationship between affluent women, femininity and the public, the essays gathered here consider works by an array of artists that includes canonical ones such as Mary Cassatt and Frans G. M. G. as well as understudied women artists including Louise Abbéma and Broncia Koller. The essays also consider works in a range of media from fashion prints and paintings to private journals and architectural designs, facilitating an analysis of femininity in public across the cultural production of the period. Various European centers, including Madrid, Florence, Paris, Brittany, Berlin and London, emerge as crucial sites of production for genteel femininity, providing a long-overdue rethinking of modern femininity in the public sphere.

TWO MILLION MILES

teNeues Dans une société de plus en plus mobile, il est devenu courant de parcourir le globe plusieurs fois en un seul mois. Les voyages qui duraient autrefois des semaines, se font maintenant en quelques heures. Tous ces périple sont comme une métaphore qui résume l'ascension professionnelle d'Andrew Macpherson, photographe de mode propulsé au rang des photographes de célébrités. Il parcourt littéralement le monde pour réaliser le portrait des personnes les plus connues de notre époque. Il s'embarque également dans un voyage artistique pour apporter une

note fraîche et stimulante à chacune de ses photographies. Dans sa quête, il emploie une multitude de techniques variées, jouant avec la forme, le contexte et la couleur. Son œuvre est assombrie par un détail tragique : un grand nombre de ses négatifs originaux ont été perdus dans l'incendie d'un entrepôt. C'est un témoignage de la force de l'œuvre de Macpherson que même reproduites à partir de pages de magazines - comme le sont certaines de ces photographies - le résultat rayonne encore de vitalité et d'intensité. HERALD OF THE STAR

ANDRÉ BAZIN'S FILM THEORY

ART, SCIENCE, RELIGION

Oxford University Press Through metaphors and allusions to art, science, and religion, André Bazin's writings on the cinema explore a simple yet profound question: what is a human? For the famous French film critic, a human is simultaneously a rational animal and an irrational being. Bazin's idea of the cinema is a mind-machine where the ethical implications have priority over aesthetic issues. And in its ability to function as an art form for the masses, cinema is the only medium that can address an audience at the individual and community levels simultaneously-- the audience sees the same film, but each individual relates to the narrative in a different way. In principle, cinema can unsettle our routines in productive ways and expand our sense of belonging to a much larger picture. By arguing that this dissident Catholic's worldview is anti-anthropocentric, Angela Dalle Vacche concludes that André Bazin's idea of the cinema recapitulates the histories of biological evolution and modern technology inside our consciousness. Through the projection of recorded traces of the world onto a brain-like screen, the cinema can open viewers up to self-interrogation and empathy towards Otherness. Bazin was neither a spiritualist nor an animist or a pantheist, yet his film theory leads also to ideas of a more cosmological persuasion: through editing and camera movement, cinema explores our belonging to a vast universe that extends from the microbes of

the microscope to the stars of the telescope. Such ideas of connectedness, coupled with Bazin's well-known emphasis of realism, form the foundation for his film theory's embrace of Italian neorealism. Choosing to avoid a quantitative naturalism based on accumulation of details, Bazin's theory instead promotes the kind of cinema that celebrates perceptual displacement, the objectification of human behavior, and one's own critical self-awareness.

CINEMATIC HISTOSPHERES

ON THE THEORY AND PRACTICE OF HISTORICAL FILMS

Springer Nature In this Open Access book, film scholar Rasmus Greiner develops a theoretical model for the concept of the histosphere to refer to the “sphere” of a cinematically modelled, physically experienceable historical world. His analysis of practices of modelling and perceiving, immersion and empathy, experience and remembering, appropriation and refiguration, combine approaches from film studies, such as Vivian Sobchack’s phenomenology of film experience, with historiographic theories, such as Frank R. Ankersmit’s concept of historical experience. Building on this analysis, Greiner examines the spatial and temporal organization of historical films and presents discussions of mood and atmosphere, body and memory, and genre and historical consciousness. The analysis is based around three historical films, spanning six decades, that depict 1950s Germany: Helmut Käutner’s *Sky Without Stars* (1955), Jutta Brückner’s *Years of Hunger* (1980), and Sven Bohse’s three-part TV series *Ku’damm 56* (2016).

LA PHOTO D'ENFANTS

Pearson Education France Loin des clichés, une mine d’inspiration pour des photos uniques et mémorables. Quel parent n'a pas cherché à photographier les petits détails de la vie quotidienne de son enfant, les bouilles de son bébé, les premiers sourires, les premiers pas ? Malgré un matériel de plus en plus performant et accessible au grand public, il n'est pourtant pas si facile de faire de belles photos de famille : banales, floues, mal cadrées, sombres ou trop claires, nos images sont souvent décevantes. Spécialisée dans la photographie d’enfants, Lisa Tichané revient aux bases de la photographie de portrait en partant d'un principe simple : c’est le photographe qui prend la photo, pas l’appareil. Les explications techniques proposées – clés de composition, utilisation de la lumière... – sont donc clairement mises au service de la créativité et de l’originalité. À travers de nombreux exemples richement illustrés et commentés, l’auteur livre ainsi une multitude d’idées pour capturer les moments du quotidien avec spontanéité et naturel : à chaque âge de la vie de son enfant le lecteur trouvera les trucs et astuces pour susciter des expressions authentiques et capturer sa vraie personnalité. Clichés et sourires forcés ne seront bientôt plus qu’un mauvais souvenir...

SELFIE BIOMETRICS

ADVANCES AND CHALLENGES

Springer Nature This book highlights the field of selfie biometrics, providing a clear overview and presenting recent advances and challenges. It also discusses numerous selfie authentication techniques on mobile devices. Biometric authentication using mobile devices is becoming a convenient and important means of verifying identity for secured access and services such as telebanking and electronic transactions. In this context, face and ocular biometrics in the visible spectrum has gained increased attention from the research community. However, device mobility and operation in uncontrolled environments mean that facial and ocular images captured with mobile devices exhibit substantial degradation as a result of adverse lighting conditions, specular reflections and motion and defocus blur. In addition, low spatial resolution and the small sensor of front-facing mobile cameras further degrade the sample quality, reducing the recognition accuracy of face and ocular recognition technology when integrated into smartphones. Presenting the state of the art in mobile biometric research and technology, and offering an overview of the potential problems in real-time integration of biometrics in mobile devices, this book is a valuable resource for final-year undergraduate students, postgraduate students, engineers, researchers and academics in various fields of computer engineering.
