Clinical Glaucoma Management

Critical Signs in Diagnosis and Therapy

W B Saunders Company Nationally know authorities provide essential information on the diagnosis and management of this common eye disorder. Designed especially for the day-to-day clinical environment, this text discusses key findings and describes their relevance to evaluation, diagnosis, and management. Contains over 375 detailed illustrations. Provides comprehensive coverage of routine patient diagnosis and care in one single source. Initial chapter provide a strong foundation in the anatomical and physiologic basis of glaucoma diseases. Editors introductions give clinicians an executive summary of every chapter, making topics easy to find in the clinical setting. Key Signs listed by anatomic region (i.e. iris or corneal findings) allow clinicians to quickly and accurately diagnose the multiple manifestations of glaucoma. Nationally known authorities emphasize important standards of care and offer thought provoking differences of opinion, where there is no accepted standard. The newest diagnostic, medical and surgical techniques are included. Equips the non-specialist and specialist alike with the tools to clearly identify the optimal care of patients who are difficult to diagnose or manage. Considers all of the factors important in determining proper therapy, as well as potential complications and side effects of therapy. Patient and doctor-friendly tone provides a clinically priceless, on-the-go recourse.

Diagnosis and Management of Glaucoma

JP Medical Ltd Glaucoma is an eye disease in which the optic nerve is damaged and can permanently damage vision and lead to blindness if left untreated. This book is a complete guide to the diagnosis and management of glaucoma. Divided into five sections, it begins with an introduction to the disease, continuing step by step through its diagnosis, the different types of glaucoma and treatment options. Authored by specialists renowned in their field based in India and the USA, this manual contains 840 images and illustrations.

Medical Management of Glaucoma

Springer Healthcare Medical Management of Glaucoma is a comprehensive review of glaucoma, current pharmacological therapies, and treatment guidelines for the disease as put forth by the American Academy of Ophthalmologists (AAO) and European Glaucoma Society (EGS). This book will review glaucoma's definition, classes, epidemiology, risk factors, pathogenesis (especially discussing intraocular pressure, aqueous humor production, and outflow), diagnosis and assessment tools, and current therapeutic options for patients. Medical Management of Glaucoma will also give ophthalmologists and related healthcare professionals insight into how the patient is affected by their disease by reviewing quality of life issues, adherence, and costs of therapy, which is particularly significant as the management of this chronic disease should be tailored for each patient.

Glaucoma: Diagnosis and Management

Glaucoma Diagnosis and Management

Lippincott Williams & Wilkins This book offers optometrists a complete, clinically oriented guide to effective diagnosis and management of glaucoma and provides valuable assistance in co-managing these patients with ophthalmologists. Coverage of diagnosis includes risk factors, genetic factors, gonioscopy, visual field analysis, intra-ocular pressure measurement, corneal thickness evaluation, and optic nerve imaging. The medical management section thoroughly describes the ophthalmic drugs used to manage glaucoma. The surgical management section describes laser and conventional procedures and offers optometrists guidelines for co-managing patients. The final section presents case studies. Chapters include clinical pearls and "how-to" instructions for procedures. Over 100 illustrations complement the text.

Pearls of Glaucoma Management

Springer Science & Business Media If you have ever uttered the commonly expressed lament, “Glaucoma is so confusing!” then this text is for you. You will no longer be bewildered. Why practitioners may be confused about how to be of help to patients with glaucoma - in its many incarnations and reincarnations - is easily understood. The issue seems to be overwhelming when one considers that the already massive population of those with glaucoma is increasing rapidly as the world’s population increases and ages. During the past 50 years the fundamental definition of glaucoma has changed almost 180°, and the indications for treatment have become more variable and controversial, some advising early therapy and others strongly cautioning against such an approach: Various diagnostic tests have come and gone and are interpreted in such different ways that there seems to be no consensus; surgical techniques come in and out of fashion in perplexing ways. There seems to be a constantly shifting, sandy foundation on which are built unsteady schools of ever-varying advice. Why practitioners, patients, and the public are often bewildered is understandable.

Best Practice in the Diagnosis and Management of Glaucoma

Abstract: Glaucoma is a devastating disease, causing significant loss of independence and diminished quality of life for millions of people. Glaucoma is a major public health problem in the United States, and blindness from glaucoma is believed to impose significant costs annually on the federal government in Social Security benefits, lost tax revenues, and health care expenditures [1]. The following project involves the Healthy People 2010 objective 28-6 of preventing vision loss due to glaucoma, and focuses on our community of optometrists to effectively diminish glaucomatous vision loss. The project objectives are as follows: evaluate current glaucoma treatment standards in Ohio, assess "best practice" glaucoma standards and encourage implementation, develop glaucoma management tools for optometrists, and ultimately, prevent vision loss. There are 1800 licensed optometrists in Ohio, of which 1200 are Ohio Optometric Association (OOA) members. A survey was administered by mail to 600 randomly selected member doctors. Additionally, attendees of the 2005 American Optometric Association (AOA) conference were selected to be surveyed. Surveys were passed out at a glaucoma course, a primary care course, and one course on dry eye. There were 90 surveys collected in total from the AOA conference. The surveys were then statistically analyzed. Focus groups were also organized to obtain optometrists' opinions on glaucoma management and potential tools to be used in patient education. The total number of surveys collected was 290. Answers were tabulated, and it was found that the survey respondents manage 142 ± 275 glaucoma patients on average, with a median of 50 and a range of 3 to 2200. Glaucoma screening tests were in concordance with professional guidelines, from both the American Optometric Association (AOA) and the American Academy of Ophthalmology (AAO). Measurement of intraocular pressure and stereoscopic appearance of the optic nerve head were found to be done by almost every optometrist surveyed. Fundus photography was only found to be used 20% of the time. Visual field testing is used 75% of the time in screening for glaucoma, and 90% of the time in managing glaucoma by our survey respondents; it is possible that imaging is taking over as a final tool in making the glaucoma diagnosis and managing it as well. Pachymetry is currently valued as part of the standard of care, thanks to recent research. Prostaglandins are found to be the first choice in medication in treating glaucoma. Focus groups were found to agree that standard of care is proper patient management to the highest level, more widespread education is needed, and that public screenings may soon be necessary to find those at risk and those with glaucoma. Although not many studies have been done on evaluating how and if optometrists are meeting the standard of care, or "best practice" as outlined by professional eye care organizations, this project provides insight into the realm of care in glaucoma diagnosis and management. Optometrists in Ohio are following clinical care guidelines in the majority of recommendations by both the AOA and the AAO. However, there does exist various shortfalls in diagnosis and management, and the need for further education of the general public. The standard of care in glaucoma is a dynamic body that must be continually re-evaluated and revised in order to provide the best care to patients.

Glaucoma Diagnosis and Management

Discusses prevalence and types of glaucoma, with an emphasis on primary open-angle and angle-closure glaucoma. Covers risk factors of and screening for POAG, highlighting the importance of optic disc evaluation and visual field examination in identifying the presence of glaucoma.

Causes, Diagnosis and Management of Glaucoma

Damage to the optic nerve causes gradual vision loss. This may occur due to a group of eye diseases called glaucoma. Open-angle glaucoma, closed-angle glaucoma and normal-tension glaucoma are some types of glaucoma. Testing for glaucoma comprises of an eye examination with measurements of the intraocular pressure, an anterior chamber angle examination, and optic nerve evaluation. Scanning laser polarimetry, optical coherence tomography and scanning laser ophthalmoscopy help in assessing the retinal nerve fiber. Vision loss due to glaucoma is permanent. If the disease is detected early, it may be possible to slow or even stop the progression of the disease with the aid of laser treatment,

medication or surgery. These treatments seek to lower eye pressure. This book is a valuable compilation of topics, ranging from the basic to the most complex advancements in the diagnosis and management of glaucoma. From theories to research to practical applications, case studies related to all contemporary topics of relevance to this condition have been included herein. It will help new researchers by foregrounding their knowledge in glaucoma.

Kugler Publications To the best of our knowledge, the 1st Global AIGS Consensus Meeting on "'Structure and Function in the Management of Glaucoma'" was also the first global consensus meeting in ophthalmology. The goal was to reach an evidence-based consensus for both clinical practice and research through the use of information obtained from peer-reviewed literature describing functional and structural diagnostic testing in glaucoma. The faculty and review group consisted of leading global authorities on glaucoma diagnostic testing. The preparation for the Consensus was unique in its format (see page xii). Repor.

Shared Care Glaucoma

John Wiley & Sons Shared Care Glaucoma provides concise, clear and user-friendly information for the non-ophthalmologist caring for glaucoma patients. It would also be an ideal text for ophthalmic trainees learning about glaucoma management and for generalist ophthalmologists who want to refresh their approach to their glaucoma care. The book covers the aetiology, classification, diagnosis and management of glaucoma under the four key sections: About Glaucoma, Detecting Progression, Treating Glaucoma and Specific Glaucoma Entities, enabling the reader to comfortably manage glaucoma patients and offering guidance on when they should refer, and to whom. Frequently asked questions are anticipated and logical responses given, supported by evidence from recent literature. That there are often no clear right and wrong decisions within many individual's glaucoma management plan is well recognised and conveyed.

Becker-Shaffer's Diagnosis and Therapy of the Glaucomas

Elsevier Health Sciences Authored by three prominent specialists in the field, this text provides comprehensive coverage of diagnostic and treatment modalities for optimal glaucoma management. Revised throughout, this new edition presents the latest guidance in clinical examination, randomized trials, medical treatment, laser therapy, and surgical procedures. Hundreds of illustrations-with many classic black and white figures from the previous editions supplemented with new color images-depict the features of glaucomas and step-by-step procedures for their management, while expanded use of highlighted boxes, lists, and summary tables make the material easy to access. Evidence-based and updated information on all aspects of the glaucomas-including physiology, genetics, interventional trials, and new surgical techniques-offer a well-rounded foundation of knowledge for making the most informed diagnoses and choosing the most effective course of treatment. Combines the cumulative experience of three prominent glaucoma specialists-addressing a full range of clinical needs for practitioners of all levels-for a uniquely written coherent perspective. Includes extensive references to current and historically important sources to provide comprehensive interpretation of the latest medical literature. Synthesizes a classical approach to the glaucomas-based on seven earlier editions spanning over 40 years-with the most up-to-date evidence-based and epidemiologically-derived classifications and outcomes. Coherently correlates with authoritative consensus documents on key areas of glaucoma, drawn up by the world-wide specialists of the World Glaucoma Association, and reprinted in the text. Revamps traditional teachings on the angle closure glaucomas, in concert with the newest international literature and technologies, to keep you up to date on the latest advances. Illustrates detailed surgical interventions applicable to the complete spectrum of clinical settings-from the developing world through contemporary operating rooms. Examines the newest and most promising developments in pharmacology, laser and surgical advances for glaucoma management, to enable you to choose the most effective patient approach. Illustrates invaluable but little-known instruments for clinical and research diagnoses, including optic nerve cupping scales, bleb assessment instruments, and more.
