It celebrates the Hammond B-3 organ, Rhodes and Wurliitzer electric pianos, the Vox Continental and Farfisa combo organs, the Hohner Clavinet, the Mellotron, the Minimoog and other famous and collectable instruments. From the earliest days of rock music, the role of keyboards has grown dramatically. Advancements in electronics created a crescendo of musical invention. In the thirty short years between 1950 and 1980, the rock keyboard went from being whatever down-on-its-luck piano awaited a band in a bar or concert hall to a portable digital orchestra. It made keyboards a centerpiece of the sound of many top rock bands, and a handful of them became icons of both sound and design. Their sounds live on: Digitally, in the memory chips of modern keyboards, and in their original form thanks to a growing group of musicians and collectors of many ages and nationalities. **Classic Keys** explores the sound, lore, and technology of these iconic instruments, including their place in the historical development of keyboard instruments, music, and the international keyboard instrument industry. Twelve significant instruments are presented as the chapter foundations, together with information about and comparisons with more than thirty-six others. Included are short profiles of modern musicians, composers, and others who collect, use, and prize these instruments years after they went out of production. Both authors are avid musicians, collect and restore vintage keyboards, and are well-known and respected in the international community of web forums devoted to these instruments. **The Sleeping Beauty Suite** from the Ballet [Eulenburg](#) **Over 200 works** of the well-known Edition Eulenburg series of scores from orchestral and choral literature, chamber music and music theatre are now available in digital format. mix. This book provides an in-depth exploration into the aesthetics of what makes a great mix. Gibson's unique approach explains how to map sounds to visuals in order to create a visual framework that can be used to analyze what is going on in any mix. Once you have the framework down, Gibson then uses it to explain the traditions that have been developed over time by great recording engineers for different styles of music and songs. You will come to understand everything that can be done in a mix to create dynamics that affect people in really deep ways. Once you understand what engineers are doing to create the great mixes they do, you can then use this framework to develop your own values as to what you feel is a good mix. Once you have a perspective on what all can be done, you have the power to be truly creative on your own - to create whole new mixing possibilities. It is all about creating art out of technology. This book goes beyond explaining what the equipment does - it explains what to do with the equipment to make the best possible mixes.

[Electronic Musician Wars and Capital](#) [MIT Press](#) A critique of capital through the lens of war, and a critique of war through the lens of the revolution of 1968. "We are at war," declared the President of the French Republic on the evening of November 13, 2015. But what is this war, exactly? In *Wars and Capital*, Éric Alliez and Maurizio Lazzarato propose a counter-history of capitalism to recover the reality of the wars that are inflicted on us and denied to us. We experience not the ideal war of philosophers, but wars of class, race, sex, and gender; wars of civilization and the environment; wars of subjectivity that are raging within populations and that constitute the secret motor of liberal governmentality. By naming the enemy (refugees, migrants, Muslims), the new fascisms establish their hegemony on the processes of political subjectivation by reducing them to racist, sexist, and xenophobic slogans, fanning the flames of war among the poor and maintaining the total war philosophy of neoliberalism. Because war and fascism are the repressed elements of post-'68 thought, Alliez and Lazzarato not only read the history of capital through war but also read war itself through the strange revolution of '68, which made possible the passage from war in the singular to a plurality of wars—and from wars to the construction of new war machines against contemporary financialization. It is a question of pushing "'68 thought" beyond its own limits and redirecting it towards a new pragmatics of struggle linked to the continuous war of capital. It is especially important for us to prepare ourselves for the battles we will have to fight if we do not want to be always defeated. [Objections to Nuclear Defence Philosophers on Deterrence](#) [Routledge](#) Moral and political questions are vitally relevant to the issue of survival in the nuclear age. Ethics has much to teach us about the meaning of national defence and civic responsibility in the nuclear state. For instance, those in NATO who argue for increased spending on such weapons do so with the intention of defending the values of the West. They must therefore be absolutely sure that they are not - as the contributors to this volume, originally published in 1984, powerfully suggest - undermining or destroying those values by the very means they adopt to preserve them. With the continued success of nuclear deterrence itself in question, responsible citizens feel an urgent need to assess the clash between personal doubts, cherished principles and their governments' loudly voiced moral certainties. In *Objections to Nuclear Defence*, professional philosophers of widely varying persuasions provide new analyses of these problems. They spell out clearly and vividly the moral and political objections - objections to the concrete nuclear policies of the Western governments today. Often impassioned but always rational, the book will be of special interest to students of international affairs, peace studies and applied philosophy as well as to the general reader who is trying to choose between political parties in Europe or North America. [Radar Instruction Manual Since 1958](#) the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Tauris](#) Since the end of the Cold War, United Nations peace operations have become an established and prominent feature of world politics. From Liberia to East Timor, the UN now carries out extensive governance-related functions and is a significant political force in Southern states and societies. Here [Richard Al-Qaq](#) leads us to a radical new understanding of the UN and its role in international politics. He uncovers the political and socio-economic import of such 'peace' activities for subject societies, and raises important questions about the functioning and dynamics of the global political order. A critical view of the internal process of programmatic reform within the UN is elaborated by detailed studies of the politics of UN peace operations in three seminal cases of the 1990s, in Somalia, Rwanda and Angola. This book is essential for understanding the new role of the UN, especially in Africa, and the politics of so-called humanitarian intervention and peace-building.
