Chaos in Hydrology

Bridging Determinism and Stochasticity

Springer **This authoritative book presents a comprehensive account of the essential roles of nonlinear dynamic and chaos theories in understanding,**

modeling, and forecasting hydrologic systems. This is done through a systematic presentation of: (1) information on the salient characteristics of hydrologic systems and on the existing theories for their modeling; (2) the fundamentals of nonlinear dynamic and chaos theories, methods for chaos identification and prediction, and associated issues; (3) a review of the applications of chaos theory in hydrology; and (4) the scope and potential directions for the future. This book bridges the divide between the deterministic and the stochastic schools in hydrology, and is well suited as a textbook for hydrology courses.

Design, Specification and Verification of Interactive Systems '95

Proceedings of the Eurographics Workshop in Toulouse, France, June 7–9, 1995

Springer Science & Business Media **This book is the final outcome of the Eurographics Workshop on Design, Specification and Verification of Interactive Systems, that was held in Bonas, from June 7 to 9, 1995. This workshop was the second of its kind, following the successful first edition in Italy in 1994. The goal of this ongoing series of meetings is to review the state of the art in the domain of tools, notations and methodologies supporting the design of Interactive Systems. This acknowledges the fact that making systems that are friendlier to the user makes the task ever harder to the designers of such systems, and that much research is still needed to provide the appropriate conceptual and practical tools. The workshop was located in the Chateau de Bonas, in the distant countryside of Toulouse, France. Tms location has been selected to preserve the quiet and studious atmosphere that was established in the monastery of Santa Croce at Bocca di Magra for the first edition, and that was much enjoyed by the participants. The conversations initiated during the sessions often lasted till late at night, in the peaceful atmosphere of the Gers landscape.**

Machine Learning

A Guide to Current Research

Springer Science & Business Media **One of the currently most active research areas within Artificial Intelligence is the field of Machine Learning. which involves the study and development of computational models of learning processes. A major goal of research in this field is to build computers capable of improving their performance with practice and of acquiring knowledge on their own. The intent of this book is to provide a snapshot of this field through a broad. representative set of easily assimilated short papers. As such. this book is intended to complement the two volumes of Machine Learning: An Artificial Intelligence Approach (Morgan-Kaufman Publishers). which provide a smaller number of in-depth research papers. Each of the 77 papers in the present book summarizes a current research effort. and provides references to longer expositions appearing elsewhere. These papers cover a broad range of topics. including research on analogy. conceptual clustering. explanation-based generalization. incremental learning. inductive inference. learning apprentice systems. machine discovery. theoretical models of learning. and applications of machine learning methods. A subject index IS provided to assist in locating research related to specific topics. The majority of these papers were collected from the participants at the Third International Machine Learning Workshop. held June 24-26. 1985 at Skytop Lodge. Skytop. Pennsylvania. While the list of research projects covered is not exhaustive. we believe that it provides a representative sampling of the best ongoing work in the field. and a unique perspective on where the field is and where it is headed.**

Children's Theories of Mind

Mental States and Social Understanding

Psychology Press **This book is a result of a study group that met to discuss the child's theory of mind. A topic whose effects span cognitive, language, and social development, it may bring a unifying influence to developmental psychology. New studies in this area acknowledge children's conceptions of intention and belief, as well as intention and belief themselves, and consider the explanations they provide for children's developing abilities. The contributors to this important volume examine several aspects of the child's theory of mind, and present significant research findings on the theory itself and how it changes and develops for each child. Discussions of the utility of a theory of mind to the child, and to developmental psychologists trying to understand children, are provided. Finally, new explanations are offered for how children acquire a theory of mind in the first place.**
