Private Security Trends, 1970 to 2000

The Hallcrest Report II

This report describes the growth and changes in the private security industry between 1970 and 1990, discusses emerging and continuing issues and trends in private security and its relationships with public law enforcement, and recommends measure and research to improve cooperation between private security and law enforcement. Data came from a review of previous research, individual and focus group interviews, and an analysis of market data. Results indicated that the increased use of locks, security lighting, and other private and public security measures reflect a growing fear of crime, even while statistics show stable or declining crime rates. In addition, the frequency and cost of business crime are increasing. Additional crime problems include breaches of business ethics, drug abuse, computer crime, and terrorism. The primary responsibility for protective measures has also been shifting from public law enforcement to private security, indicating the need for greater cooperation between the public and private sectors. In addition, contract security companies are growing, while proprietary security organizations are decreasing in number. Major issues include the privatization of police support tasks, false alarms, police moonlighting, and the growing use of private adjudication.

Cyber-Physical Security

Protecting Critical Infrastructure at the State and Local Level

Springer This book focuses on the vulnerabilities of state and local services to cyber-threats and suggests possible protective action that might be taken against such threats. Cyber-threats to U.S. critical infrastructure are of growing concern to policymakers, managers and consumers. Information and communications technology (ICT) is ubiquitous and many ICT devices and other components are interdependent; therefore, disruption of one component may have a negative, cascading effect on others. Cyber-attacks might include denial of service, theft or manipulation of data. Damage to critical infrastructure through a cyber-based attack could have a significant impact on the national security, the economy, and the livelihood and safety of many individual citizens. Traditionally cyber security has generally been viewed as being focused on higher level threats such as those against the internet or the Federal government. Little attention has been paid to cyber-security at the state and local level. However, these governmental units play a critical role in providing services to local residents and consequently are highly vulnerable to cyber-threats. The failure of these services, such as waste water collection and water supply, transportation, public safety, utility services, and communication services, would pose a great threat to the public. Featuring contributions from leading experts in the field, this volume is intended for state and local government officials and managers, state and Federal officials, academics, and public policy specialists.
