Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility. **Computational Methods for Risk Management in Economics and Finance MDPI** At present, computational methods have received considerable attention in economics and finance as an alternative to conventional analytical and numerical paradigms. Intermediated Securities Legal Problems and Practical Issues Bloomsbury Publishing *Globally, there has been a shift from securities being held directly by an investor, to a situation in which many securities are held via an intermediary. The existence of one or more intermediaries between the investor and the issuer has a potentially significant impact on the rights of the investor, the role and obligations of the issuer, and on the position and responsibilities of the intermediary. However, different jurisdictions have dealt with the issues arising from intermediation in a variety of ways. In the UK, for example, the concept of a trust is used to explain the different rights and obligations which arise in this scenario, whereas in the US the issues have been addressed by legislation, in the form of UCC Article 8. This variety is problematic, given that it is possible for an investor to hold securities in a number of different jurisdictions. A new UNIDROIT Convention on the issue of Intermediated Securities, the Geneva Securities Convention 2009, aims to create a common framework for dealing with these issues. This collection of essays explores the issues that arise when securities are held via an intermediary, and in particular assesses the solutions put forward by the new Convention on this issue. It will be essential reading for practitioners and academics.*
