Essentials of Chinese Medicine

Volume 3

Springer Science & Business Media The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government's university funding authority to develop a School of Chinese Medicine to prepare students who will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.

Oral Presentation in Medicine

Springer Science & Business Media Scientific knowledge may be communicated in the written form or orally. Written communication (medical writing) usually takes the form of original or research papers, which appear in scientific journals. Oral communication in medicine is usually made during a meeting and is often called a free paper. Oral medical communication abides by certain rules. The objectives of this book are to examine and discuss these rules. Oral medical communication involves taking the floor to speak, whether it be as a speaker, the person who gives the talk in front of an audience, or as part of the audience, who can then ask questions or make comments. The go between is called the moderator. Some forms of oral communication are more specific to meetings with a large audience: free papers, panel discussions or roundtables, posters, and videos. Others are more characteristic of smaller audiences: hospital staff meetings, or literature update sessions. Educational talks have a didactic goal and resemble a lecture, for instance, in a course, or are closer to a case report, when they are given during a small class get-together.
