This comprehensive reference book places pulmonary rehabilitation within the wider framework of respiratory disease, and the health burden that this now poses worldwide. Part one of the book examines the evidence **Pulmonary Rehabilitation ERS Monograph 93 European Respiratory Society** Pulmonary rehabilitation is an effective treatment for people with a range of chronic lung diseases. In recent years, there have been substantial advances in the science underpinning pulmonary rehabilitation. Advances have been seen in the patient groups in whom it is indicated; in the breadth of programme content; in new methods of delivery; and not least, in important outcomes. This Monograph brings together scientific and clinical expertise in pulmonary rehabilitation, with the aim of optimising its delivery in clinical practice. **Medical Education in Pulmonary, Critical Care, and Sleep Medicine Advanced Concepts and Strategies Springer** This is a book for clinician educators. It offers modern, evidence-based practices to use in teaching learners at a range of levels, with an emphasis on concrete strategies that teachers can implement in their own clinical practices as well as in small and large group settings. Medical education is rapidly changing with emerging evidence on best practices and a proliferation of new technologies. As strategies for effectively teaching medical learners evolve, it is important to understand the implications for Pulmonary, Critical Care, and Sleep Medicine (PCCM). This text is structured to allow easy access to the reader. Chapters are organized around level of learner (e.g., medical student to PCCM fellow to practicing physicians) as well as the location of teaching. Given the variety of clinical settings in which PCCM physicians teach, specific consideration of best practices, broad changes in curricular design and pedagogy are considered in different clinical contexts. Each chapter begins with a focus on why the topic is important for clinician educators. A review of the available evidence and relevant medical education theory about the topic follows, with examples from specific studies that provide insight into best practices regarding the concepts and topics discussed in the chapter. For chapters focusing on learners, different environments are considered and similarly, if the focus is on the learning environment, attention is paid to the approach to different learners. Each chapter ends with a summary of the primary points from the chapter and concrete examples of how clinician teachers can put the concepts discussed in the chapter into practice. This is an ideal guide for educators in pulmonary, critical care, and sleep medicine. **Interventional Pulmonology European Respiratory Society Cardiovascular and Pulmonary Physical Therapy - E-Book Evidence to Practice Elsevier Health Sciences** Providing a solid foundation in cardiovascular and pulmonary physiology and rehabilitation, Cardiovascular and Pulmonary Physical Therapy: Evidence and Practice, 5th Edition uses the latest scientific literature and research in covering anatomy and physiology, assessment, and interventions. This book is written by experts in the field who couple their experience with practical strategies (the art) with evidence-based theory (the science). Chapters discuss global concepts such as motivational interviewing on improving engagement and how to apply strategies to specific situations (for examples: smoking cessation, promoting physical activity, inhaler adherence, supplemental oxygen use, and non-invasive ventilation) commonly experienced on the front lines of caring for patients with pulmonary disorders. The textbook raises awareness of direct approaches and recent technological advances that healthcare professionals can use to support positive behavior change in their day-to-day clinical practice. Effective, patient-tailored self-management interventions are discussed, including the evidence for these interventions and ways to personalize the strategies to each patient's unique needs. This book is an ideal guide for healthcare professionals working with patients experiencing chronic pulmonary conditions, including pulmonologists, primary care physicians, physician assistants, nurses, trainees, and the many allied health professionals involved in delivering care such as respiratory therapists, pharmacists, and behavioral psychologists. The 30-day hospital readmission rates for this diagnosis are exceedingly high with an estimate of 14%, thus making it imperative that patients have a solid understanding of their disease state. Continuous efforts are being made to improve patient care with the focus on patient education. Educational methods and tools utilized include paper brochures, verbal instruction, and use of Audiovisual tools including the Getwellnetwork(TM). At project inception, no process or protocol existed at the clinical site of interest to ensure that the content of educational materials are consistent with evidence-based and guideline recommendations. Additionally, educational content may not be reviewed to be actionable and understandable to the patients. Thus, revealing no standard method deemed superior to provide patients and caregivers education upon hospital discharge for a diagnosis of this chronic condition. A product evaluation and appraisal of an audiovisual educational platform known as the Getwellnetwork(TM) that is available on demand with the use of a SMART TV was completed. The appraisal was inclusive of a pulmonary interprofessional expert panel to ensure the modules and materials are reviewed from different healthcare disciplines. Panel members utilized the Patient Education Materials Assessment Tool for Audiovisual (PEMAT-AV) materials to assess module content for actionability and understandability. Results from this product evaluation project may be useful for other chronic disease education materials.
