Breaking the Boundaries

A One-World Approach to Planning Education

Springer Science & Business Media Exploring the complex arena of international planning for development has until now been uniquely the privilege of influential senior western planners. This book calls into question many of their hallowed principles and much of the conventional wisdom still evident in the halls of academe. At a time of increasing enrollment of foreign students in North American planning programs, the emergence of a new voice has coincided with a growing skepticism, worldwide, about old notions of planning and development in poorer and ex-colonial countries. Now there is a need for brave innovations to reshape our understanding of the global crisis and the potential for progressive and democratic local solutions in both rich and poor nations alike. This new voice is given expression by academics and professionals from Third World nations who received their planning education in the west and who now hold posts in major western planning schools. *Breaking the Boundaries* presents their views, and those of concerned colleagues, about the need for a radically changed curriculum based on a comparative, one-world approach to planning education. Their personal experiences as young expatriate scholars, and later as teachers of both Third World and First World students in western planning schools are seen as crucial to this need for change. Through candid reflections and perceptive critiques of their own field- the spatial, environmental, social, design and communications disciplines - the contributors explore crucial issues in development planning from theoretical and professional practice perspectives.

Writing That Makes Sense

Critical Thinking in College Composition

Resource Publications (OR) *Description: Students often face a daunting dilemma in academia when it comes to writing. In their composition courses they are encouraged to express their emotions, find themselves, construct their own meanings, discover their voices, and own their identities through writing. But when they are asked to write lab reports, history papers, sociological studies, or to write discipline specific documents for their majors, their professors aren't much interested in self-expression, self-esteem, identity politics, or endlessly open-ended non-answers in search of a question. Their professors want clear writing that makes sense and that evidences critical thinking. What are students to do? Writing That Makes Sense takes students through the basics of the writing process and critical thinking, and it teaches them how to write various types of academic essays they are likely to encounter in their academic careers. Drawing on nearly twenty years of experience in teaching college composition and professional writing, David S. Hogsette combines relevant writing pedagogy and practical assignments with the basics of critical thinking and logical thought to provide students with step-by-step guides for successful writing in academia. Writing That Makes Sense includes many professional essays and articles from a variety of voices often underrepresented in academia today, thus introducing students to a wider intellectual diversity. Students will also benefit from a chapter on information literacy that provides practical tips on engaging the research process and writing research papers. About the Contributor(s): David S. Hogsette is Associate Professor of English and Writing Coordinator at the Old Westbury campus of the New York Institute of Technology, where he teaches composition, professional writing, and various upper-level literature courses. Compassionate Critical Thinking

How Mindfulness, Creativity, Empathy, and Socratic Questioning Can Transform Teaching

Rowman & Littlefield *Compassionate Critical Thinking demonstrates how to use mindfulness with instructional effectiveness to increase student participation and decrease classroom stress, and it turns the act of teaching into a transformational practice. Many books teach mindfulness, but few provide a model for teaching critical thinking and integrating it across the curriculum. The purpose of this book is to show teachers how to create a classroom culture of compassionate critical thinking. When students feel a lack of meaning and purpose in their school lives, they resist learning. Using a Socratic style of inquiry, Rabois changes the classroom dynamic to encourage self-reflection, insight, and empathy. Vignettes capture dialogue between teacher and students to illustrate how mindfulness practices elicit essential questions which stimulate inquiry and direct discovery. What bigger mystery is there, what more interesting and relevant story, than the story of one's own mind and heart and how they relate us to the world?*
