Model Rules of Professional Conduct

American Bar Association The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

State, Land and Democracy in Southern Africa

Routledge Each country in southern Africa has a unique history but in all of them socio-economic inequalities and high poverty levels weaken the governments' legitimacy and represent a challenge to models of economic development. One key issue appears to be the solution of the land question. This vital concern affects both citizenship and democracy in the political systems of the region, yet no government has shown the capacity or commitment to solve it. In this volume leading European, American and African scholars explore in detail the relationship between state, land and democracy. They examine the historical background of asset allocation and its impact on questions of nationality, the definition of citizenship, human rights and the current political and economic processes in southern Africa.

Law and Regulation of Mobile Payment Systems

Issues arising 'post' financial inclusion in Kenya

Routledge Over the last ten years mobile payment systems have revolutionised banking in some countries in Africa. In Kenya the introduction of M-Pesa, a new financial services model, has transformed the banking and financial services industry. Giving the unbanked majority access to the financial services market it has attracted over 18 million subscribers which is remarkable given that fewer than 4 million people in Kenya have bank accounts. This book addresses the legal and regulatory issues arising out of the introduction of M-Pesa in Kenya and its drive towards financial inclusion. It considers the interaction between regulation and technological innovation with a particular focus on the regulatory tools, institutional arrangements and government decisional processes through the examination as a whole of its regulatory capacity. This is done with a view to understanding the regulatory capacity of Kenya in addressing the vulnerabilities presented by technological innovation in the financial industry for consumers after financial inclusion. It also examines the way that mobile payments have been regulated by criticising the piecemeal approach that the Central Bank of Kenya has taken in addressing the legal and regulatory issues presented by mobile payments. The book argues there are significant gaps in the regulatory regime of mobile banking in Kenya.

Systems Engineering and Analysis of Electro-Optical and Infrared Systems

CRC Press Electro-optical and infrared systems are fundamental in the military, medical, commercial, industrial, and private sectors. Systems Engineering and Analysis of Electro-Optical and Infrared Systems integrates solid fundamental systems engineering principles, methods, and techniques with the technical focus of contemporary electro-optical and infrared optics, imaging, and detection methodologies and systems. The book provides a running case study throughout that illustrates concepts and applies topics learned. It explores the benefits of a solid systems engineering-oriented approach focused on electro-optical and infrared systems. This book covers fundamental systems engineering principles as applied to optical systems, demonstrating how modern-day systems engineering methods, tools, and techniques can help you to optimally develop, support, and dispose of complex, optical systems. It introduces contemporary systems development paradigms such as model-based systems engineering, agile development, enterprise architecture methods, systems of systems, family of systems, rapid prototyping, and more. It focuses on the connection between the high-level systems engineering methodologies and detailed optical analytical methods to analyze, and understand optical systems performance capabilities. Organized into three distinct sections, the book covers modern, fundamental, and general systems engineering principles, methods, and techniques needed throughout an optical system's development lifecycle (SDLC); optical systems building blocks that provide necessary optical systems analysis methods, techniques, and technical fundamentals; and an integrated case study that unites these two areas. It provides enough theory, analytical content, and technical depth that you will be able to analyze optical systems from both a systems and technical perspective.

The \$13 Trillion Question

Managing the U.S. Government's Debt

Brookings Institution Press The underexamined art and science of managing the federal government's huge debt. Everyone talks about the size of the U.S. national debt, now at \$13 trillion and climbing, but few talk about how the U.S. Treasury does the borrowing—even though it is one of the world's largest borrowers. Everyone from bond traders to the home-buying public is affected by the Treasury's decisions about whether to borrow short or long term and what types of bonds to sell to investors. What is the best way for the Treasury to finance the government's huge debt? Harvard's Robin Greenwood, Sam Hanson, Joshua Rudolph, and Larry Summers argue that the Treasury could save taxpayers money and help the economy by borrowing more short term and less long term. They also argue that the Treasury and the Federal Reserve made a huge mistake in recent years by rowing in opposite directions: while the Fed was buying long-term bonds to push investors into other assets, the Treasury was doing the opposite—selling investors more long-term bonds. This book includes responses from a variety of public and private sector experts on how the Treasury does its borrowing, some of whom have criticized the way the Treasury has been managing its borrowing.

Handbook of Theory and Practice of Sustainable Development in Higher Education

Volume 1

Springer This Handbook approaches sustainable development in higher education from an integrated perspective, addressing the dearth of publications on the subject. It offers a unique overview of what universities around the world are doing to implement sustainable development (i.e. via curriculum innovation, research, activities, or practical projects) and how their efforts relate to education for sustainable development at the university level. The Handbook gathers a wealth of information, ideas, best practices and lessons learned in the context of executing concrete projects, and assesses methodological approaches to integrating the topic of sustainable development in university curricula. Lastly, it documents and disseminates the veritable treasure trove of practical experience currently available on sustainability in higher education.

Troubled Transit

Asylum Seekers Stuck in Indonesia

ISEAS - YUSOF ISHAK INSTITUTE Troubled Transit considers the situation of asylum seekers stuck in limbo in Indonesia from a number of perspectives. It presents not only the narratives of many transit migrants but also the perceptions of Indonesian authorities and of representatives of international and non-government organizations responsible for the care of transiting asylum seekers. Fascinated by the extraordinary and seemingly limitless resilience shown by asylum seekers during their often lengthy and dangerous journeys, the author highlights one particular fragment of their journeys – their time in Indonesia, which many expect to be the last stepping stone to a new life. While they long for their new life to unfold, most asylum seekers become embroiled in the complexities of living in transit. Indonesia, a vast archipelago of more than 17,000 islands, is more than a location where people spend time waiting; it is a nation state that interacts with transiting asylum seekers and formulates policies that have a profound impact on their experience in transit there. Troubled Transit tries to explain the complexities faced by the transiting migrants within the context of the Indonesian government and its political challenges, including its relationship with Australia. The Australia-centric view of recent asylum seeker issues has tended to ignore the larger socio-political context of the migratory routes and the perspectives of transit states towards asylum seekers stuck in transit. This book hopes to direct the Australia-centric gaze northwards to take Indonesian policies and policymaking into account, thereby giving Indonesia more relevance as a transit country and as an important partner in regional protection schemes and migration management. Even though some Indonesian policies and practices are less than favourable for asylum seekers, and even reprehensible from a human rights perspective, more attention must be paid to ongoing developments that impact on transiting asylum seekers in Indonesia if any of the hardships they suffer there are to be alleviated.

Improving Diagnosis in Health Care

National Academies Press Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to Improving Diagnosis in Health Care, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. Improving Diagnosis in Health Care, a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute to the growing momentum for change in this crucial area of health care quality and safety.

Negotiating Spaces for Literacy Learning

Multimodality and Governmentality

Bloomsbury Publishing Negotiating Spaces for Literacy Learning addresses two paradoxical currents that are sweeping through the contemporary educational field. The first is the opening up of possibilities for multimodal communication as a result of developments in digital technologies and the sensitivity to multiliteracies. The second is the increasing pressure from standardised testing, accountability and performance measurement which pull curricular and pedagogical practices out of alignment with the everyday informal practices and interests of teachers and learners and narrow opportunities for diverse expressions of literacy. Bringing together an international team of scholars to examine the tensions and struggles that result from the current educational climate, the book provides a much-needed discussion of the intersection of technologies of literacies, education and self. It does so through diverse approaches, including philosophical, theoretical and methodological treatments of multimodality and governmentality, and a range of literacies - early years, primary school, workplace, digital, middle school, secondary school, indigenous, adult and place. With examples taken from all stages of education and in several countries, the book allows readers to explore a range of multimodal practices and the ways in which governmentality plays out across them.

Accountability in the Economic and Monetary Union

Foundations, Policy, and Governance

Oxford University Press Following the financial and public debt crisis, the EU's Economic and Monetary Union (EMU) has been under intense political scrutiny. The measures adopted in response to the crisis have granted additional powers to the EU (and national) authorities, the exercise of which can have massive implications for the economies of the Member States, financial institutions and, of course, citizens. The following questions arise: how can we hold accountable those institutions that are exercising power at the national and EU level? What is the appropriate level, type and degree of accountability and transparency that should be involved in the development of the EU's governance structures in the areas of fiscal and economic governance and the Banking Union? What is the role of parliaments and courts in holding those institutions accountable for the exercise of their duties? Is the revised EMU framework democratically legitimate? How can we bridge the gap between the citizens - and the institutions that represent them - and those institutions that are making these important decisions in the field of economic and monetary policy? This book principally examines the mechanisms for political and legal accountability in the EMU and the Banking Union. It examines the implications that the reforms of EU economic governance have had for the locus and strength of executive power in the Union, as well as the role of parliaments (and other political fora) and courts in holding the institutions acting in this area accountable for the exercise of their tasks. It further sets out several proposals regarding transparency, accountability, and legitimacy in the EMU.

Digital Innovation in Financial Services

Legal Challenges and Regulatory Policy Issues

Kluwer Law International B.V. Consumer behaviour is rapidly trending towards the use of digital devices as instruments through which to transact day-to-day business. This original and timely book shows how this trend creates new opportunities not only for retail consumers but also for financial service providers, regulators and central banks. The author offers a comprehensive overview of these opportunities and their countervailing legal and regulatory challenges. The author describes and analyses in unprecedented detail the application of digital financial innovation (FinTech), and some of its core manifestations, including virtual currencies, Blockchain and distributed ledger technologies to the delivery of financial services, in areas such as: - payments; - securities clearing and settlement; - central banking; - real-time access to financial information; - instant completion of core financial transactions; - data validation and reconciliation processes; and - digital contracting (smart contracts). Also clarified are the legal and other barriers to be overcome - including cybersecurity and risks to privacy - before any widespread adoption of digital innovation in the highly regulated financial sector context can occur. As an informed assessment of the legal merits and risks of technological innovation for financial service providers and central banks, and as a contribution to establishing a conceptual framework within which to analyse and better understand the applications of digital innovation to the financial sector, this practical work is bound to be welcomed by legal practitioners and legal scholars alike with an interest in financial services. Policymakers and regulators will also appreciate its guidance on how to temper the less benevolent aspects of FinTech with targeted, risk-focused regulation, so as to promote innovation and preserve the potential benefits for financial markets and their participants alike.

Mutual Funds and Exchange-Traded Funds

Building Blocks to Wealth

Oxford University Press *Mutual Funds and Exchange-Traded Funds: Building Blocks to Wealth* offers a synthesis of the theoretical and empirical literature primarily on mutual funds but also discusses related investment vehicles, especially ETFs. In this edited volume, noted scholars and practitioners write chapters in their areas of expertise. It interweaves the contributions of multiple authors into an authoritative overview of important but selective topics. Readers will gain an in-depth understanding of mutual funds and ETFs from experts from around the world. Based on research-based evidence, this is not intended to be a "how to" book; instead, it is a scholarly and in-depth approach to important investment subjects. Although the book places greater attention on these different types of investments in the United States, it also examines them in a global context. In today's financial environment, mutual funds and ETFs are dynamic areas that continue to evolve at a rapid pace. Because the flow of materials on the subject is voluminous, this book, by necessity, must be selective because it cannot cover every aspect of this field. However, readers can gain important insights about each investment vehicle including its structure and uses, performance and measurement. Beyond these core topics and issues, the book also examines the latest trends, cutting-edge developments, and real-world situations. Given its broad scope, this practical and comprehensive book should appeal to investors, investment professionals, academics, and others interested in mutual funds and ETFs. In particular, this book should help investors make key asset allocation decisions while capturing the benefits of a highly diversified, well-constructed, lower-cost portfolio of complementary strategies that enhance financial wealth.

Principles and Practice in EU Sports Law

Oxford University Press Principles & Practice in EU Sports Law provides an overview of EU Sports Law. In particular it assesses sporting bodies' claims for legal autonomy from the 'ordinary law' of states and international organisations. Sporting bodies insist on using their expertise to create a set of globally applicable rules which should not be deviated from irrespective of the territory on which they are applied. The application of the *lex sportiva*, which refers to the conventions that define a sport's operation, is analysed, as well as how this is used in claims for sporting autonomy. The *lex sportiva* may generate conflicts with a state or international institution such as the European Union, and the motives behind sporting bodies' claims in favour of the *lex sportiva*'s autonomy may be motivated by concern to uphold its integrity or to preserve commercial gain. Stephen Weatherill's text underlines the tense relationship between *lex sportiva* and national and regional jurisdictions which is exemplified with specific focus on the EU. The development of EU sports law and its controversies are detailed, reinforced by the example of relevant legal principles in the context of the practice of sports law. The intellectual heart of the text endeavours to make a normative assessment of the strength of claims in favour of sporting autonomy, and the comparison between different jurisdictions and sports is evident. Furthermore the enduring dilemma facing sports lawyers running throughout the text is whether sport should be regarded as special, and in turn how (far) its special character should be granted legal recognition.

Business and Human Rights

From Principles to Practice

Routledge In a global economy, multinational companies often operate in jurisdictions where governments are either unable or unwilling to uphold even the basic human rights of their citizens. The expectation that companies respect human rights in their own operations and in their business relationships is now a business reality that corporations need to respond to. *Business and Human Rights: From Principles to Practice* is the first comprehensive and interdisciplinary textbook that addresses these issues. It examines the regulatory framework that grounds the business and human rights debate and highlights the business and legal challenges faced by companies and stakeholders in improving respect for human rights, exploring such topics as: the regulatory framework that grounds the business and human rights debate, challenges faced by companies and stakeholders in improving human rights, industry-specific human rights standards, current mechanisms to hold corporations to account, future challenges for business and human rights. With supporting case studies throughout, this text provides an overview of current themes in the field and guidance on practical implementation, demonstrating that a thorough understanding of the human rights challenges faced by business is now vital in any business context.

The 1.5 Billion People Question

Food, Vouchers, or Cash Transfers?

World Bank Publications Most of the people in low and middle-income countries covered by social protection receive assistance in the form of in-kind food. The origin of such support is rooted in countries' historical pursuit of three interconnected objectives, namely attaining self-sufficiency in food, managing domestic food prices, and providing income support to the poor. This volume sheds light on the complex, bumpy and non-linear process of how some flagship food-based social protection programs have evolved over time, and how they currently work. In particular, it lays out the broad trends in reforms, including a growing move from in-kind modalities to cash transfers, from universality to targeting, and from agriculture to social protection. Case studies from Egypt, India, Indonesia, Mexico, Sri Lanka, and United States document the specific experiences of managing the process of reform and implementation, including enhancing our understanding of the opportunities and challenges with different social protection transfer modalities.

Asian Defence Review 2014-15

KW Publishers Pvt Ltd The revival of major world power rivalry is a striking feature of the current international affairs. In the year gone by, Europe, supported by the US, vied with Russia for influence in Ukraine—a race that led to the annexation of Crimea by Russia and a pro-Russian insurgency in that region. In Asia, while the US is gradually drawing down in Afghanistan, it is also seeking to counter the growing influence of China. The sole Super Power is garnering support from China's neighbours, India included, to balance the resurgent Dragon. Meanwhile, the rapid growth of ISIS has disturbed the world peace. The progress made in the negotiations on Iran's nuclear programme is likely to affect calculations and equations all over the world. No region is impervious to the happenings in another part of the world. Competition (read rivalries) and geopolitical shifts pose myriad challenges to the peace-loving nations of the world—quite often, they are faced with the difficulty of evading armed conflicts. It requires conscious and sustained effort to do so. In order to work towards such goals, it is necessary to look at geopolitical, security and military-related issues objectively. The Centre for Air Power Studies has been publishing the Asian Defence Review to fulfill this need. This volume, a resource base for both the professional and the general readers, is the eighth in the series under this title. It aims to add to the pool of information and knowledge in the current strategic discourse dealing with military strategy, defence, politics and trends in military capabilities that impact Asia. In particular, it covers some of the important issues related to Air Power, Tactical Nuclear Weapons, Cyber Security, Network-Centric Warfare, Environmental Degradation, Iran, Pakistan and China.
