## The Ethics of Workplace Privacy

*Peter Lang* In recent years, new and more intrusive surveillance technology has found its way into workplaces. New medical tests provide detailed information about workers' biology that was previously unthinkable. An increasing number of employees work under camera surveillance. At the same time, computers allow for a detailed monitoring of our interactions with machines, and all this information can be electronically stored in an easily accessible format. What is happening in our workplaces? Has the trend towards more humane workplaces been broken? From an ethical point of view, which types and degrees of surveillance are acceptable, and which are not? From a policy point of view, what methods can be used to regulate the use of surveillance technology in workplaces? These are some of the questions that have driven the research reported in this book. Written by an interdisciplinary group of researchers in Computer Ethics, Medical Ethics and Moral Philosophy, this book provides a broad overview that covers both empirical and normative aspects of workplace privacy.

## Vedic Management

### The Dharmic and Yogic Way

*Gyan Books* There has always been an inherent tension in the Vedic system between the negative affirmative approaches, between life in the world and renunciation. The book explores the manner in which dharma and yoga harmonize the tensing between the inner and the outward. The book goes on explain how Vedic management, through the concepts of dharma and yoga, encourage peace and concord through selflessness and cooperative behavior and the sacrifice of the ego, opinions and strongly held beliefs so as to harmonize with fellow human beings. The Upanishad system which interiorize Vedic through the yogic way of meditation and contemplation is also examined. The book goes on the to delineate the concept of dharmic management as applied to social concerns and the polity. This is through an examination of the dhramashastras and the two epics, the Ramayana and the Mahabharata. The yogic system as elaborated by Lord Sri Krishna in the Bhagavad Gita is studied to see its impact on managements. The conclusion reached is that Lord Sri Krishan makes management more an art than a science while also making the system flexible and creative. The normative Vedic management system was utilized by Gandhi to set up an organization that toppled one of the mightiest empires known to history. The manner in which this was done is also examined. Some reference form the latest management littératureur are also there and it is left to the reader to decide whether Vedic management is relevant today.

## The Future of Alienation

University of Illinois Press Richard Schacht has long argued that alienation theory can shed important light upon aspects of life in the modern world and upon our human predicament. The essays here call for a rethinking of a variety of forms of alienation in light of contemporary dynamics and a clearer understanding of the dialectic of human selfhood and social participation. They call for a renewed interest in alienation theory; they counter the myth that, with the collapse of the Soviet empire, Marx's thinking has been "refuted"; and they argue for an enhanced sensitivity to the problem of how we describe, interpret, and evaluate the world around us in light of the complexity and diversity that alienation theory reveals.

## Workplace Bullying in India

Routledge Workplace bullying, a pattern of persistent and targeted emotional abuse within the context of an evolving unequal interpersonal relationship, has so far not received academic attention in India. This book explores the phenomenon of workplace bullying through a series of quantitative and qualitative inquiries conducted in India's Information Technology-Enabled Services-Business Process Outsourcing (ITES-BPO) sector. Through quantitative evidence from two multi-city surveys, the book highlights the incidence of interpersonal bullying at work and the organizational measures available to deal with it. Over one-third of the survey respondents experienced bullying, which was usually from superiors though cross-level co-bullying was also reported. Approximately 70 per cent of the survey respondents described organizational measures including anti-bullying policies, employee awareness and training programmes, encouragement of witnesses/bystanders to intervene in bullying situations, and organizational actions.

Through qualitative data, the book provides insights into both interpersonal and depersonalized bullying. The lived experiences of targets and witnesses/bystanders of interpersonal bullying underscore the critical influence of human resources management (HRM) on target coping, the long-term identity work targets engage in as they respond to identity disruptions and the effect of workplace friendship on witnesses'/bystanders' behaviour. The presence of institutionalized bullying facilitates the development of the emergent construct of depersonalized bullying. Across both quantitative and qualitative inquiries, the inclusion of socio-cultural, micro-organizational, macro-organizational, and business, dimensions deepens our understanding. The book goes beyond a country-specific contribution to address gaps in the international literature on workplace bullying and will be of interest to academics and practitioners in the fields of management, organizational behaviour (OB), human resources (HR), industrial relations, psychology, sociology, anthropology, and law as well as to the general reader.

## Making News in Global India

# Media, Publics, Politics

*Cambridge University Press* In the decades following India's opening to foreign capital, the city of Bangalore emerged, quite unexpectedly, as the outsourcing hub for the global technology industry and the aspirational global city of liberalizing India. Through an ethnography of English and Kannada print news media in Bangalore, this ambitious and innovative new study reveals how the expanding private news culture played a critical role in shaping urban transformation in India, when the allegedly public profession of journalism became both an object and agent of global urbanization. Building on extensive fieldwork carried out with the Times of India group, the largest media house in India, between 2008 and 2012, Sahana Udupa argues that the class project of the 'global city' news discourse came into striking conflict with the cultural logics of regional language and caste practices. Advancing new theoretical concepts, *Making News in Global India* takes arguments in media scholarship beyond the dichotomy of public good and private accumulation.

## Invisible Labor

# Hidden Work in the Contemporary World

*Univ of California Press* "Demographic and technological trends have yielded new forms of work that are increasingly more precarious, globalized, and brand centered. Some of these shifts have led to a marked decrease in the visibility of work or workers. This edited collection examines situations in which technology and employment practices hide labor within the formal paid labor market, with implications for workplace activism, social policy, and law. In some cases, technological platforms, space, and temporality hide workers and sometimes obscure their tasks as well. In other situations, workers may be highly visible--indeed, the employer may rely upon the workers' aesthetics to market the branded product--but their aesthetic labor is not seen as work. In still other cases, the work occurs within a social interaction and appears as leisure--a voluntary or chosen activity--rather than as work. Alternatively, the workers themselves may be conceptualized as consumers rather than as workers. Crossing the occupational hierarchy and spectrum from high- to low-waged work, from professional to manual labor, and from production to service labor, the authors argue for a broader understanding of labor in the contemporary era. This book adopts an interdisciplinary approach that integrates perspectives from law, sociology, and industrial/labor relations"--Provided by publisher.

## Organizational Ethics and the Good Life

*Oxford University Press on Demand* In giving an account of what is ethical, we can begin by describing the community that accommodates the good life; to be ethical, then, is to be a contributor to that sort of community. We live in political communities as well as in communities built around families, neighborhoods, churches, and other associations. But for many of us the community that will afford the good life that is the purpose of morality is the organization that employs us. Aristotle claimed that the greatest ethical questions are political ones; today we have reason to believe that the greatest ethical questions are organizational ones. In *Organizational Ethics and the Good Life*, Edwin Hartman contends that, as ethics is about the good community, a great part of business ethics is about the good organization. He argues that a large and complex organization has the characteristic of the "commons" studied by game theorists, and that it is the task of management to preserve the commons in the long-term interests of all its members, principally by

creating an appropriate corporate culture. A good corporate culture not only serves the interests of the participants but makes the organization a place in which they can develop interests that are compatible with both autonomy and good corporate citizenship: that is, they can develop a sense of the good life that is appropriate to the moral person. Hartman opposes the standard view that the study of organizational ethics is a matter of considering how certain foundational ethical principles apply in organizational settings; instead, he argues, business ethicists should consider how free and rational people arrive at a consensus on practical ethical principles in a morally good organization that leaves room for moral progress. And what makes an organization morally good? In discussing justice, loyalty, and other features of a morally good organization, Hartman draws largely on the work of Rawls and Hirschman. In describing the good life as one in which well-being and morality overlap, Hartman proposes a new version of an idea as old as Aristotle, who taught that human beings are rational but also irreducibly communal creatures.

## Business Ethics: A Kantian Perspective

Cambridge University Press It is more important than ever that a business must be both ethical and profitable. In this thoroughly revised and updated second edition, Norman E. Bowie shows that by applying Kant's three formulations of the categorical imperative, and by doing the right thing for the right reason, a business can achieve success in both of these fields. Bowie uses examples such as building trust, transparency through open book management and respecting employees by providing a living wage and meaningful work. This new edition, for graduates and academic researchers in the field of business ethics, has been heavily revised to include the newest scholarship on Kantian ethics, with a new emphasis on Kant's later moral and political theory, a workable account of Kantian capitalism, and additional accounts on corporate social responsibility, Kantianism and human rights, corporate moral agency, and the Kantian theory of meaningful work.

## Persons

### The Difference Between 'someone' and 'something'

Oxford University Press on Demand An examination and defence of the concept of personality, long central to Western moral culture but now increasingly under attack, by a leading European philosopher. It takes issue with major contemporary philosophers, especially in the English-speaking world (such as Parfit and Singer), who have contributed to the eclipse of the idea, and traces the debate back to the foundations of modern philosophy in Descartes and Locke. There are extended discussions of the sources of the idea in Christian theology and its development in Western philosophy. There are also a number of pointed discussions of pressing practical questions - for example, our treatment of the severely disabled human and the moral status of intelligent non-human animals. The book covers a great deal of ground before coming to a focused conclusion: all human beings are persons - and perhaps all porpoises, too!

# Philosophical Tools for Technological Culture

## Putting Pragmatism to Work

*Indiana University Press* "Hickman['s]... style of pragmatism provides us with flexible, philosophical 'tools' which can be used to analyze and penetrate various technology and technological cultural problems of the present. He, himself, uses this toolkit to make his analyses and succeeds very well indeed." —Don Ihde A practical and comprehensive appraisal of the value of philosophy in today's technological culture. Philosophical Tools for Technological Culture contends that technology—a defining mark of contemporary culture—should be a legitimate concern of philosophers. Larry A. Hickman contests the perception that philosophy is little more than a narrow academic discipline and that philosophical discourse is merely redescription of the ancient past. Drawing inspiration from John Dewey, one of America's greatest public philosophers, Hickman validates the role of philosophers as cultural critics and reformers in the broadest sense. Hickman situates Dewey's critique of technological culture within the debates of 20th-century Western philosophy by engaging the work of Richard Rorty, Albert Borgmann, Jacques Ellul, Walter Benjamin, Jürgen Habermas, and Martin Heidegger, among others. Pushing beyond their philosophical concerns, Hickman designs and assembles a set of philosophical tools to cope with technological culture in a new century. His pragmatic treatment of current themes—such as technology and its relationship to the arts, technosciences and technocrats, the role of the media in education, and the meaning of democracy and community life in an age dominated by technology—reveals that philosophy possesses powerful tools for cultural renewal. This original, timely, and accessible work will be of interest to readers seeking a deeper understanding of the meanings and consequences of technology in today's world.

# Employee Identity in Indian Call Centres

## The Notion of Professionalism

*SAGE Publications India* Based on a series of qualitative inquiries exploring employee experiences of work in international facing call centres in Mumbai and Bangalore, India, this book presents the lived experience of call centre agents, coupled with managers' perspectives and trade unionists' viewpoints. The book underscores how employee identity is defined by the notion of professionalism. Inculcated in agents

by employer organizations, professional identity is invoked as a means of gaining employee commitment to the realization of organizational goals in a bid to ensure competitive advantage. While professional identity is associated with a host of privileges, it not only results in agents justifying and complying with organizational requirements and absorbing job-related strain but also precludes agents' engagement with collectivist endeavours aimed at representing and protecting their interests, causing the nascent trade union movement in this sector to reinvent itself. While employer organizations thus rely on the notion of professionalism to achieve organizational ends, they admit to discrepancies in the enactment of professionalism, indicating the presence of rhetoric. Providing new and holistic insights gained via rigorous academic research, this book is of value to HR and OB professionals and scholars, industrial relations experts, sociologists, psychologists and trade unionists, as well as readers interested in India's ITES-BPO sector.

## Theological Perspectives on a Surveillance Society

### Watching and Being Watched

*Routledge* This book looks at contemporary surveillance practices and ideologies from a Christian theological perspective. Surveillance studies is an emerging, interdisciplinary field that brings together scholars from sociology, criminology, political studies, computing and information studies, cultural studies and other disciplines. Although surveillance has been a feature of all societies since humans first co-operated to watch over one another whilst hunting and gathering it is the convergence of information technologies within both commerce and the state that has ushered in a 'surveillance society'. There has been little, if any, theological consideration of this important dimension of social organisation; this book fills the gap and offers a contribution to surveillance studies from a theological perspective, broadening the horizon against which surveillance might be interpreted and evaluated. This book is also an exercise in consciousness-raising with respect to the Christian community in order that they may critically engage with a surveillance society by drawing on biblical and theological resources. Being the first major theological treatment in the field it sets the agenda for more detailed considerations.

## The Working Life

# The Promise and Betrayal of Modern Work

*Currency* A wide-ranging look at the allure and changing significance of work. With seductions, misunderstandings, and misinformation everywhere, this immensely readable book calls for a new contract--with ourselves. Drawing from history, mythology, literature, pop culture, and practical experience, Ciulla probes the many meanings of work or its meaninglessness and asks: Why are so many of us letting work take over our lives and trying to live in what little time is left? What has happened to the old, unspoken contract between worker and employer? Why are young people not being disloyal when they regularly consider job-changing? Employers can't promise as much to workers as before. Is that because they promise so much to stockholders? Why are there mass layoffs and "downsizing" in a time of unequalled corporate prosperity? And why are the most common lies in business about satisfactory employee performance? The traditional contract between employers and employees is over. This thoughtful and provocative study shows how to replace it by the one we make with ourselves.

## Psychological Reactance

# A Theory of Freedom and Control

*Academic Press* Psychological Reactance: A Theory of Freedom and Control provides information pertinent to the fundamental aspects of reactance theory. This book discusses a number of special topic areas to which the reactance theory seems especially relevant. Organized into five parts encompassing 17 chapters, this book begins with an overview of the relationship between freedom and perceived freedom as conceived by reactance theory. This text then describes the clinical applications, societal problem solutions, and power relations in the real world. Other chapters consider the developmental aspects of reactance. This book discusses as well the reactance theory in a wider theoretical context by examining impression

management formulations of the theory and by comparing reactance to other theoretical models whereby the notion of control plays a major role. The final chapter deals with the role of cognitive processes in association with reactance in attitude change phenomena. This book is a valuable resource for social psychologists.

## Privacy Rights

### Moral and Legal Foundations

*Penn State Press* We all know that Google stores huge amounts of information about everyone who uses its search tools, that Amazon can recommend new books to us based on our past purchases, and that the U.S. government engaged in many data-mining activities during the Bush administration to acquire information about us, including involving telecommunications companies in monitoring our phone calls (currently the subject of a bill in Congress). Control over access to our bodies and to special places, like our homes, has traditionally been the focus of concerns about privacy, but access to information about us is raising new challenges for those anxious to protect our privacy. In *Privacy Rights*, Adam Moore adds informational privacy to physical and spatial privacy as fundamental to developing a general theory of privacy that is well grounded morally and legally.

## Management for Sustainable Development

*River Publishers* Today, increasingly more, the word sustainability is present in all kinds of discussions: at home, at work, at school, in all society. Conscious of the environment where we live everybody looks to find the best solutions to solve problems that result from Human Being evolution. Management for a sustainable development appears as a process from which organizations try to use all its resources, as well as improve its organizational and technological development, in order to answer not only to the present but also to future human and social needs. Only in this way is it possible to improve the quality of life. Seen in this way, sustainable development is understood to be people centred. We have a special concern with cultural, social and economic dimensions, where individuals can develop, together as a society, whilst at the same time individual and organizational activities can be implemented without destroying the present diversity and complexity of the ecological system where we live. Taking into account these concerns, this book looks to cover issues related to the management for sustainable development in a context where organizations are continually facing high challenges for what concerns the items related to, amongst others, the re-use, recycling, waste reduction, add value, low costs and time of production, sustainable behaviour, not only in an environmental perspective but also in an organizational perspective. Today's organizations can no longer develop their practices based in the existent

paradigms. On the contrary, it is necessary to completely break from these paradigms, creating a total change of mentality in the way we manage the organizational activities. Taking into account this reality, managing for a sustainable development appears as a management philosophy focused in productivity improvement considering different kinds of goals, such as biological, economic and social systems goals. Conscious of this reality, this book contributes to the exchange of experiences and perspectives about the state of research related to the management for a sustainable development, as well as the future direction of this research field. It looks to provide a support to academics and researchers, as well as those operating in the management field and who need to deal with policies and strategies related to sustainable development issues.
