This book will serve readers everywhere as a core text that integrates medical science with clinical medicine, conveying key knowledge and practical advice in a highly accessible and readable format. The opening section describes the fundamentals of genetics, immunology, infectious diseases and population health, and discusses the core principles of clinical decision-making and good prescribing. A new second section on emergency and critical care medicine encompasses poisoning, envenomation and environmental medicine, and introduces a new chapter on acute medicine and critical illness. The third section covers the major medical specialties, each thoroughly revised and brought fully up to date. Two new chapters on maternal and adolescent/transition medicine complement the one on ageing and disease. A new chapter on medical ophthalmology has been included. Clinical Examination overviews summarise the main elements for each system and now feature in the biochemistry, nutrition and dermatology chapters. Presenting Problems sections provide a clear pathway for the assessment of and approach to the most common complaints in each specialty. Practice Point summaries detail the practical skills that medical students and junior doctors must acquire. Emergency boxes emphasise the core knowledge needed to manage acutely ill patients. In Old Age, In Pregnancy and In Adolescence boxes highlight differences in the practice of medicine in these patient groups, and illustrate the interfaces between medical, obstetric and paediatric services. The text is extensively illustrated, with over 1000 diagrams, clinical photographs, and radiology and pathology images. The global perspective is enhanced by an International Advisory Board of experts from 17 countries, and by authors from around the world. The new second section on emergency and critical care medicine introduces a significantly expanded and comprehensive account of the approaches to dealing with acute medical and critical illness. Two new chapters on maternal and adolescent/transition medicine complement the one on ageing and disease by addressing problems encountered at key stages of patients' lives. A new chapter on medical ophthalmology has been included as a direct response to readers' requests. The opening chapter has been completely rewritten with a new focus on the important principles of clinical decision-making or clinical reasoning. A new internal text design for this 23rd Edition provides a simpler and clearer presentation of the various categories of text boxes. **The Pocket Guide to the DSM-5 Diagnostic Exam** *Amer Psychiatric Pub Incorporated* Designed for interviewers of all experience levels, The Pocket Guide to the DSM-5? They also contemplate the increasingly important place of medical ethics in the wider social context, particularly in this age of globalization, not only in healthcare practice, but also policy, discussions in the media, pressure group and activism settings, and in legal judgments.
