Green Health Guide (People Get Sick & Die from Chemicals & Pollution)** *Lulu Press, Inc* The Natural Law of the Universe is be who you were born to be, take what you need and leave the rest. I got sick from the sulphites in lemon juice then I started getting headaches from something. I think it was aspartame in pop. I got Dr. Hulda Clark's book Cure for all Cancers and when I read it, I thought she was obsessed with being pure away from all the chemicals in industrial products but she did what nobody else has done. She catalogs almost every product in existence and tells you what's wrong with it. The modern capitalist industries will not tell you if their products contain materials that are toxic to your health. You have to learn these things for yourself then decide how dangerous all that stuff is and if it's a risk to your longevity and quality of life. The Bureau of Labor Statistics reported over 4,700 fatal work injuries in the United States in 2020, most frequently in transportation-related incidents. The same year, approximately 2.7 million workplace injuries and illnesses were reported by private industry employers. According to the National Safety Council, the cost in lost wages, productivity, medical and administrative costs is close to 1.2 trillion dollars in the US alone. It is imperative—by law and ethics—for engineers and safety and health professionals to drive down these statistics by creating a safe workplace and safe products, as well as maintaining a safe environment. Safety and Health for Engineers is considered the gold standard for engineers in all specialties, teaching an understanding of many components necessary to achieve safe workplaces, products, facilities, and methods to secure safety for workers, users, and the public. Each chapter offers information relevant to help safety professionals and engineers in the achievement of the first canon of professional ethics: to protect the health, safety, and welfare of the public. The textbook examines the fundamentals of safety, legal aspects, hazard recognition and control, the human element, and techniques to manage safety decisions.
