## Planning Melbourne

### Lessons for a Sustainable City

**CSIRO PUBLISHING** For more than a decade, Melbourne has had the fastest-growing population of any Australian capital city. It is expanding outward while also growing upward through vast new high-rise developments in the inner suburbs. With an estimated 1.6 million additional homes needed by 2050, planners and policymakers need to address current and emerging issues of amenity, function, productive capacity and social cohesion today. *Planning Melbourne* reflects on planning since the post-war era, but focuses in particular on the past two decades and the ways that key government policies and influential individuals and groups have shaped the city during this time. The book examines past debates and policies, the choices planners have faced and the mistakes and sound decisions that have been made. Current issues are also addressed, including housing affordability, transport choices, protection of green areas and heritage and urban consolidation. If Melbourne's identity is to be shaped as a prospering, socially integrated and environmentally sustainable city, a new approach to governance and spatial planning is needed and this book provides a call to action.

## The Composting Handbook

### A how-to and why manual for farm, municipal, institutional and commercial composters

**Academic Press** The *Composting Handbook* provides a single guide to the science, principles and best practices of composting for large-scale composting operations facing a variety of opportunities and challenges converting raw organic materials into a useful and marketable product. Composting is a well-established and increasingly important method to recycle and add value to organic by-products. Many, if not most, of the materials composting treats are discarded materials that would otherwise place a burden on communities, industries, farms and the environment. Composting converts these materials into a valuable material, compost, that regenerates soils improving soils for plant growth and environmental conservation. The *Composting Handbook* expands on previously available resources by incorporating new information, new subjects and new practices, drawing its content from current scientific principles, research, engineering and industry experience. In both depth and breadth, it covers the knowledge that a compost producer needs to succeed. Topics include the composting process, methods of composting, equipment, site requirements, environmental issues and impacts, business knowledge, safety, and the qualities, uses and markets for the compost products. The *Composting Handbook* is an invaluable reference for composting facility managers and operators, prospective managers and operators, regulators, policy makers, environmental advocates, educators, waste generators and managers and generally people interested in composting as a business or a solution. It is also appropriate as a textbook for college courses and a supplemental text for training courses about composting or organic waste management. Created in conjunction with the Compost Research and Education Foundation (CREF) Includes the latest information on composting and compost, providing the first comprehensive resource in decades Written with focus on both academic and industrial insights and advances

### It's Not Easy Building Green : Legal and Political Issues in Sustainable Development

## Nudibranchs and Related Molluscs

Nudibranchs, the 'butterflies of the sea', belong to a group that includes bubble shells, sea hares, side-gilled slugs, sap-sucking slugs and sea butterflies (pteropods). This group includes some of the most beautiful, colourful and delicate of all marine creatures. More than 400 species of nudibranchs occur in south-eastern Australia. This guide introduces marine naturalists, divers, biologists and others to the nudibranchs and related molluscs commonly encountered in the Bass Strait region--their identification, biology, and associations with other plants and animals. An introductory pictorial key is included, along with nearly 250 species descriptions accompanied by colour photographs and illustrations to aid recognition. Further references and a glossary are also included.

## Understanding the Western Port Environment

### A Summary of Current Knowledge and Priorities for Future Research

## Managing Horses on Small Properties

**Landlinks Press** A dream shared by many is to run a few horses on a small property on the fringes of a city or town. This book shows how to combine sustainable land management practices with a style of horse keeping that will protect the health and well-being of your horses, as well as the land and its wildlife. Good property management does not need to be an expensive undertaking. Improved pasture means less feed bills, reduced mud or dust improves a horse's health and reduces vet bills, better manure management turns a liability into an asset. The reader is first introduced to the horse's natural behaviour as expressed in body language, intelligence, ability to learn, grazing, herd instincts and social behaviour. The book then goes on to cover all the basics of safe handling, routine care and common health problems. Property selection, property design, water supply, pasture management, horse facilities, fencing, trees and plants, manure management and equipment and tools are comprehensively dealt with in separate chapters. This is a practical book written with a minimum of jargon especially for those who are new to horse ownership and small properties. It will deliver real benefits to the landholder, including reduced horse keeping costs, better welfare of horses, increased productivity, and improved land management practices.

## Radio Navigational Aids

### From Flower to Honey

**Lerner Digital™ Audisee®** eBooks with Audio combine professional narration and text highlighting for an engaging read aloud experience! How is honey made from a flower? Follow each step in nature's cycle—from pretty bloom to tasty treat—in this fascinating book!

## Conservation Covenants

**Stationery Office/Tso** In this report, the Law Commission make recommendations for the introduction of a new statutory scheme of conservation covenants in England and Wales. The recommendations to introduce such a scheme would create a new legal tool, enabling landowners to protect land in order to conserve and restore our natural and built environment. Conservation covenants would allow landowners voluntarily to create binding obligations on their own land to meet a conservation objective, such as preserving woodland, cultivating a particular species of plant or protecting a habitat for an animal, or farming land in a certain way. The proposed statutory scheme would give individual landowners the opportunity, using private agreements, to contribute to conservation efforts being made across England and Wales. The scheme will create a versatile, simple and cost-effective legal tool capable of: unlocking currently missed conservation opportunities by overcoming the legal difficulties faced when creating binding obligations; facilitating better ways to deliver existing conservation objectives; and providing assurance of long-term conservation benefits. The report includes a draft Conservation Covenants Bill, which would introduce the conservation covenant scheme into the law of England and Wales.

## The Land is a Map

## Placenames of Indigenous Origin in Australia

**ANU E Press** The entire Australian continent was once covered with networks of Indigenous placenames. These names often evoke important information about features of the environment and their place in Indigenous systems of knowledge. On the other hand, placenames assigned by European settlers and officials are largely arbitrary, except for occasional descriptive labels such as 'river, lake, mountain'. They typically commemorate people, or unrelated places in the Northern hemisphere. In areas where Indigenous societies remain relatively intact, thousands of Indigenous placenames are used, but have no official recognition. Little is known about principles of forming and bestowing Indigenous placenames. Still less is known about any variation in principles of placename bestowal found in different Indigenous groups. While many Indigenous placenames have been taken into the official placename system, they are often given to different features from those to which they originally applied. In the process, they have been cut off from any understanding of their original meanings. Attempts are now being made to ensure that additions of Indigenous placenames to the system of official placenames more accurately reflect the traditions they come from. The eighteen chapters in this book range across all of these issues. The contributors (linguistics, historians and anthropologists) bring a wide range of different experiences, both academic and practical, to their contributions. The book promises to be a standard reference work on Indigenous placenames in Australia for many years to come.

## Recreating the Country

### A Blueprint for the Design of Sustainable Landscapes

Challenges landholders and land managers in general to consider new ways of thinking about how we might reverse the inexorable decline and disappearance of Australian plants and animals from rural landscapes. While integrating conservation and production has become the catchcry from foresters to dairy farmers, what can be practically done? Provides the stretch goals and the blueprint for ways of adding habitat and designing more wildlife-friendly properties - the biorich plantation. Integrated with other forms of vegetation, these would aim to enrich habitat potential across rural landscapes, not just for a lifetime, but in perpetuity. Asserts we have to rethink our revegetation strategies to match the sophistication of natural design principles. At its heart are ten design principles, observed from nature, which set out to bridge the gap between farm forestry and environmental plantings and bring back the bush in rural landscapes.

## The Hooded Plover

### Innovation for 21st Century Conservation

"This publication is based principally on the presentations made to the Innovation for 21st Century Conservation Symposium held on 20-21 March 2012 in Adelaide, South Australia. The publication and the symposium are a joint collaboration between the Australian Committee for IUCN, the South Australian Department of Environment, Water and Natural Resources, and The Nature Conservancy. The symposium was the second in the ACIUCN Science Informing Policy Symposia Series." -- Page 4.

## Balanced Urban Development: Options and Strategies for Liveable Cities

**Springer** This book provides a unique synthesis of concepts and tools to examine natural resource, socio-economic, legal, policy and institutional issues that are important for managing urban growth into the future. The book will particularly help the reader to understand the current issues and challenges and develop strategies and practices to cope with future pressures of urbanisation and peri-urban land, water and energy use challenges. In particular, the book will help the reader to discover underlying principles for the planning of future cities and peri-urban regions in relation to: (i) Balanced urban development policies and institutions for future cities; (ii) Understanding the effects of land use change, population increase, and water demand on the liveability of cities; (iii) Long-term planning needs and transdisciplinary approaches to ensure the secured future for generations ahead; and (iv) Strategies to adapt the cities and land, water and energy uses for viable and liveable cities. There are growing concerns about water, food security and sustainability with increased urbanisation worldwide. For cities to be liveable and sustainable into the future there is a need to maintain the natural resource base and the ecosystem services in the peri-urban areas surrounding cities. This need is increasing under the looming spectre of global warming and climate change. This book will be of interest to policy makers, urban planners, researchers, post-graduate students in urban planning, environmental and water resources management, and managers in municipal councils.

## Indigenous and Minority Placenames

### Australian and International Perspectives

**ANU E Press** This book showcases current research into Indigenous and minority placenames in Australia and internationally. Many of the chapters in this volume originated as papers at a Trends in Toponymy conference hosted by the University of Ballarat in 2007 that featured Australian and international speakers. The chapters in this volume provide insight into the quality of toponymic research that is being undertaken in Australia and in countries such as Canada, Finland, South Africa, New Zealand, and Norway. The research presented here draws on the disciplines of linguistics, geography, history, and anthropology. The book includes meticulous studies of placenames in central NSW and the Upper Hunter region; Gundungurra cave names; western Arnhem Land; Northern Cape York Peninsula and Mount Wheeler in Queensland; saltwater placenames around Mer in the Torres Strait; and the Kaurna in South Australia.

## Guidelines for Dredging

### Waders

## The Shorebirds of Australia

This book provides a comprehensive account of all the 80 Australian species. Many make huge and hazardous migrations to and from distant parts of the Northern Hemisphere. Many take on colourful plumage for breeding, while others retain their full beauty throughout the year.

## Nature Conservation Review Victoria 2001

Second in a series of guides to Victoria's national parks, in this instance presenting Mount Buffalo. Contains Aboriginal and European history, descriptions of plants and animals and comprehensive visitor information. Provides information about planning a trip, accommodation, safety tips, and suggested itineraries. The particular needs of the young, elderly and disabled visitors are covered. Includes maps covering all walking tracks, ski-runs and cross-country ski trails, descriptions of 28 walks, line drawings, colour photos of birds and flowers, and a list of further references. Also available in the series is 'Discovering the Prom' (1999).

## World Public Sector Report

### Globalization and the State

**United Nations Publications** The World Public Sector Report will be published every two years with the intention of reviewing major trends and issues concerning public administration and governance. This inaugural issue of the report considers the process of globalisation and the challenges and opportunities it offers for the role of the public sector in countries around the world. It is increasingly being acknowledged that the State is a key actor in the development process and has a major role to play in making globalisation work for all, for example in alleviating poverty and income inequality, advancing human rights, promoting sustainable development and combating international crime. Issues discussed in the report include: the many facets of globalisation; its impact on the State; reinforcing state institutions and social policies; defining and measuring the size of the State.

## The Arctic in World Affairs

**Seattle : Washington Sea Grant Program** Considers the Arctic to shed light on generic questions pertaining to international cooperation as well as evaluating the prospects for international cooperation in the Arctic.

## Blackberry Control Manual

## Management and Control Options for Blackberry (Rubus Spp.) in Australia

*"The manual will be a valuable guide for the management and control of the weedy blackberry species in Australia. Blackberry has been recognised as a Weed of National Significance (WoNS) in Australia because of its high degree of invasiveness, its aggressive spread, and its economic and environmental impacts. Blackberry seriously threatens both agricultural and natural ecosystems."--Foreword.*
