Do Economists Make Markets?

On the Performativity of Economics

Princeton University Press Around the globe, economists affect markets by saying what markets are doing, what they should do, and what they will do. Increasingly, experimental economists are even designing real-world markets. But, despite these facts, economists are still largely thought of as scientists who merely observe markets from the outside, like astronomers look at the stars. Do Economists Make Markets? boldly challenges this view. It is the first book dedicated to the controversial question of whether economics is performative--of whether, in some cases, economics actually produces the phenomena it analyzes. The book's case studies--including financial derivatives markets, telecommunications-frequency auctions, and individual transferable quotas in fisheries--give substance to the notion of the performativity of economics in an accessible, nontechnical way. Some chapters defend the notion; others attack it vigorously. The book ends with an extended chapter in which Michel Callon, the idea's main formulator, reflects upon the debate and asks what it means to say economics is performative. The book's insights and strong claims about the ways economics is entangled with the markets it studies should interest--and provoke--economic sociologists, economists, and other social scientists. In addition to the editors and Callon, the contributors include Marie-France Garcia-Parpet, Francesco Guala, Emmanuel Didier, Philip Mirowski, Edward Nik-Khah, Petter Holm, Vincent-Antonin Lépinay, and Timothy Mitchell.

Enabling Things to Talk

Designing IoT solutions with the IoT Architectural Reference Model

Springer The Internet of Things (IoT) is an emerging network superstructure that will connect physical resources and actual users. It will support an ecosystem of smart applications and services bringing hyper-connectivity to our society by using augmented and rich interfaces. Whereas in the beginning IoT referred to the advent of barcodes and Radio Frequency Identification (RFID), which helped to automate inventory, tracking and basic identification, today IoT is characterized by a dynamic trend toward connecting smart sensors, objects, devices, data and applications. The next step will be "cognitive IoT," facilitating object and data re-use across application domains and leveraging hyper-connectivity, interoperability solutions and semantically enriched information distribution. The Architectural Reference Model (ARM), presented in this book by the members of the IoT-A project team driving this harmonization effort, makes it possible to connect vertically closed systems, architectures and application areas so as to create open interoperable systems and integrated environments and platforms. It constitutes a foundation from which software companies can capitalize on the benefits of developing consumer-oriented platforms including hardware, software and services. The material is structured in two parts. Part A introduces the general concepts developed for and applied in the ARM. It is aimed at end users who want to use IoT technologies, managers interested in understanding the opportunities generated by these novel technologies, and system architects who are interested in an overview of the underlying basic models. It also includes several case studies to illustrate how the ARM has been used in real-life scenarios. Part B then addresses the topic at a more detailed technical level and is targeted at readers with a more scientific or technical background. It provides in-depth guidance on the ARM, including a detailed description of a process for generating concrete architectures, as well as reference manuals with guidelines on how to use the various models and perspectives presented to create a concrete architecture. Furthermore, best practices and tips on how system engineers can use the ARM to develop specific IoT architectures for dedicated IoT solutions are illustrated and exemplified in reverse mapping exercises of existing standards and platforms.

Essential Health Benefits

Balancing Coverage and Cost

National Academies Press In 2010, an estimated 50 million people were uninsured in the United States. A portion of the uninsured reflects unemployment rates; however, this rate is primarily a reflection of the fact that when most health plans meet an individual's needs, most times, those health plans are not affordable. Research shows that people without health insurance are more likely to experience financial burdens associated with the utilization of health care services. But even among the insured, underinsurance has emerged as a barrier to care. The Patient Protection and Affordable Care Act (ACA) has made the most comprehensive changes to the provision of health insurance since the development of Medicare and Medicaid by requiring all Americans to have health insurance by 2016. An estimated 30 million individuals who would otherwise be uninsured are expected to obtain insurance through the private health insurance market or state expansion of Medicaid programs. The success of the ACA depends on the design of the essential health benefits (EHB) package and its affordability. Essential Health Benefits recommends a process for defining, monitoring, and updating the EHB package. The book is of value to Assistant Secretary for Planning and Evaluation (ASPE) and other U.S. Department of Health and Human Services agencies, state insurance agencies, Congress, state governors, health care providers, and consumer advocates.

Project Management: Concepts, Methodologies, Tools, and Applications

Concepts, Methodologies, Tools, and Applications

IGI Global Organizations of all types are consistently working on new initiatives, product lines, or implementation of new workflows as a way to remain competitive in the modern business environment. No matter the type of project at hand, employing the best methods for effective execution and timely completion of the task at hand is essential to project success. Project Management: Concepts, Methodologies, Tools, and Applications presents the latest research and practical solutions for managing every stage of the project lifecycle. Emphasizing emerging concepts, real-world examples, and authoritative research on managing project workflows and measuring project success in both private and public sectors, this multi-volume reference work is a critical addition to academic, government, and corporate libraries. It is designed for use by project coordinators and managers, business executives, researchers, and graduate-level students interested in putting research-based solutions into practice for effective project management.

Strengthening Forensic Science in the United States

A Path Forward

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The Childes Project

Tools for Analyzing Talk

Lawrence Erlbaum Associates Language research thrives on data collected from spontaneous interactions in naturally occurring situations. However, the process of collecting, transcribing, and analyzing naturalistic data can be extremely time-consuming and often unreliable. This book describes three basic tools for language analysis of transcript data by computer that have been developed in the context of the "Child Language Data Exchange System (CHILDES)" project. These are: the "CHAT" transcription and coding format, the "CLAN" package of analysis programs, and the "CHILDES" database. These tools have brought about significant changes in the way research is conducted in the child language field. They are being used with great success by researchers working with second language learning, adult conversational interactions, sociological content analyses, and language recovery in aphasia, as well as by students of child language development. The tools are widely applicable, although this book concentrates on their use in the child language field, believing that researchers from other areas can make the necessary analogies to their own topics. This thoroughly revised 2nd edition includes documentation on a dozen new computer programs that have been added to the basic system for transcript analysis. The most important of these new programs is the "CHILDES" Text Editor (CED) which can be used for a wide variety of purposes, including editing non-Roman orthographies, systematically adding codes to transcripts, checking the files for correct use of "CHAT," and linking the files to digitized audio and videotape. In addition to information on the new computer programs, the manual documents changed the shape of the "CHILDES/BIB" system--given a major update in 1994--which now uses a new computer database system. The documentation for the "CHILDES" transcript database has been updated to include new information on old corpora and information on more than a dozen new corpora from many different languages. Finally, the system of "CHAT" notations for file transcript have been clarified to emphasize the ways in which the codes are used by particular "CLAN" programs. The new edition concludes with a discussion of new directions in transcript analysis and links between the "CHILDES" database and other developments in multimedia computing and global networking. It also includes complete references organized by research topic area for the more than 300 published articles that have made use of the "CHILDES" database and/or the "CLAN" programs. LEA also distributes the "CLAN" programs and the complete "CHILDES" Database--including corpora from several languages and discourse situations--described in "The CHILDES Project." Be sure to choose the correct platform (IBM or Macintosh) for the "CLAN" programs; the "CHILDES" Database CD-ROM runs on both platforms.

Transcribing Talk and Interaction

Issues in the Representation of Communication Data

John Benjamins Publishing Interest in transcript-based research has grown significantly in recent years. Alongside this growth has been an increase in awareness of the empirical utility of naturalistic research on language use in interaction. However, a quick scan of the literature reveals that very few transcription books have been published in the past three decades. This is an astonishing fact given that there are perhaps hundreds of books published on spoken discourse analysis. This book aims to narrow this gap by providing an introduction to the theories and practices related to transcribing communication data. The book is intended for students with little to no knowledge of transcription work and/or instructors responsible for teaching introductory courses on transcript-based research. Readers who are learning or teaching discourse/conversation analysis or similar analytic methods of investigation will find this book particularly helpful. The author: Christopher Jenks has many years of experience teaching transcription work and analysis of communication data to postgraduate students and researchers. In addition to running workshops and giving presentations on similar topics at universities around the world, he has published widely in top international journals and has numerous other forthcoming publications.

Google Scholar and More

New Google Applications and Tools for Libraries and Library Users

Routledge In only a few years, Google has become an authoritative provider of multiple products which have changed the digital information landscape. This book discusses how libraries can go beyond Google's basic search and Scholar functions to expand services for their patrons. Respected authorities reveal the expanding variety of new Google applications developed in the past few years, many of which have not received wide attention and are as yet not often used in libraries. Applications explored include Google Co-op, Google

News, Google Docs & Spreadsheets, Google Calendar, and Google Talk. This book also discusses different important aspects of the company's expansion of functions, such as the failure of the Google Answers experiment, the broad variety of free Google applications that librarians can use to collaborate, and the success of Google's Blogger, among others. A helpful chronology of Google's growth is provided, as well as comparative analyses between various Google functions and other functions that are currently available. The book is extensively referenced. This book is an invaluable resource for academic librarians, public librarians, school librarians, library science faculty, and special librarians. This book was published as a special issue of the Journal of Library Administration.

Recording, Documentation and Information Management for the Conservation of Heritage Places

Routledge This two volume guide provides a comprehensive overview of the fundamental principles and guidelines for documenting cultural heritage places. It seeks to aid heritage managers and decision makers in understanding their roles and responsibilities in this essential activity. Volume 1 (Guiding Principles) explains why heritage managers must make sure that heritage information fully integrated into all research, investigation and conservation activities. Through the discussion of basic principles, benefits and new approaches, it assists those in charge of preserving immovable cultural heritage by bringing current heritage information practices to a new level. By recording we create a reference for evaluating change and add to the understanding of a site. By documenting we guarantee that information is systematically collected and preserved for future use. By managing the information we make it available and provide a basis for sharing our knowledge and understanding. Volume 2 presents illustrated examples from around the world. Good documentation of a site allows for better understanding of the site's value. Recognizing value and significance is often the first step toward a site's eventual conservation. The information obtained through the documentation process allows conservation professionals to record current conditions, consider appropriate conservation options, plan interventions, apply treatments, and finally, measure the results of their efforts. Documentation can be a tool in resolving a conservation issue. This volume presents several illustration examples from around the world, in various stages of conservation.

Sustainable Buildings and Infrastructure

Paths to the Future

Routledge The second edition of Sustainable Buildings and Infrastructure continues to provide students with an introduction to the principles and practices of sustainability as they apply to the construction sector, including both buildings and infrastructure systems. As a textbook, it is aimed at students taking courses in construction management and the built environment, but it is also designed to be a useful reference for practitioners involved in implementing sustainability in their projects or firms. Case studies, best practices and highlights of cutting edge research are included throughout, making the book both a core reference and a practical guide.

Remote

Office Not Required

Currency The classic guide to working from home and why we should embrace a virtual office, from the bestselling authors of *Rework* "A paradigm-smashing, compulsively readable case for a radically remote workplace."—Susan Cain, *New York Times* bestselling author of *Quiet* Does working from home—or anywhere else but the office—make sense? In *Remote*, Jason Fried and David Heinemeier Hansson, the founders of Basecamp, bring new insight to the hotly debated argument. While providing a complete overview of remote work's challenges, Jason and David persuasively argue that, often, the advantages of working "off-site" far outweigh the drawbacks. In the past decade, the "under one roof" model of conducting work has been steadily declining, owing to technology that is rapidly creating virtual workspaces. Today the new paradigm is "move work to the workers, rather than workers to the workplace." Companies see advantages in the way remote work increases their talent pool, reduces turnover, lessens their real estate footprint, and improves their ability to conduct business across multiple time zones. But what about the workers? Jason and David point out that remote work means working at the best job (not just one that is nearby) and achieving a harmonious work-life balance while increasing productivity. And those are just some of the perks to be gained from leaving the office behind. *Remote* reveals a multitude of other benefits, along with in-the-trenches tips for easing your way out of the office door where you control how your workday will unfold. Whether you're a manager fretting over how to manage workers who "want out" or a worker who wants to achieve a lifestyle upgrade while still being a top performer professionally, this book is your indispensable guide.

Ebook: Talk for Writing Across the Curriculum, How to Teach Non-Fiction Writing to 5-12 Year Olds (Revised Edition)

McGraw-Hill Education (UK) This bestselling resource has been fully updated, putting formative assessment at the heart of the Talk for Writing process and showing how to help children love writing across the curriculum. By helping children speak the language of non-fiction in a fun engaging way before they attempt to write, the Talk for Writing approach builds children's confidence and linguistic ability enabling them to craft their own writing. In the new edition, this practical resource offers: • Fully worked, tried and tested examples of how to apply Talk for Writing to each non-fiction text type • A wide range of fun activities helping children internalise how to express and link text effectively • A process that co-constructs learning so that children learn how to structure text and create toolkits of key ingredients • Guidance for teachers in England on how to apply the approach across the primary curriculum • An OLC including new footage of Pie Corbett demonstrating Talk for Writing and new footage of classes engaged in the approach • Advice on how to use the DVD and handouts to train all staff in the approach • Evidence of impact from cold to hot tasks Designed for busy teachers, *Talk for Writing across the Curriculum*, second edition, will help transform children's writing and attainment across the curriculum. "This book celebrates the importance of talk in becoming and growing as a writer: talk to share ideas; talk to analyse text; talk to co-construct writing; and to talk to evaluate writing. Throughout the book constantly underlines the importance of talk for learning and the many creative and rich ways talk can be used to help young writers internalise the rhythms and patterns of text. Full of practical ideas and activities, the teaching combines being creative and being critical in a wholly integrated way. An invaluable resource for primary school teachers!" Debra Myhill, Professor of Education at the University of Exeter, UK "The teaching of reading has always taken priority in policy and practice in literacy. Pie Corbett and Julia Strong have produced a very welcome counterweight to that dominance in their *Talk for Writing Across the Curriculum*. It is so refreshing to see suggestions for teaching to bring elements of language together, especially when done in such an entertaining and engaging way as this. This new edition makes a 'classic' even better." David Wray, Emeritus Professor, University of Warwick, UK "This latest update of Pie and Julia's best-selling book reflects changes in the curriculum, strengthening the T4W approach, using cold and hot tasks, showing new worked examples of how to apply T4W to each non-fiction type and placing formative assessment at the heart of the process. It is exciting to see how all the best ideas and findings in education are converging, evidenced in this latest 'up to the minute' excellent publication." Shirley Clarke, Formative Assessment Expert

E-Learning Companion: Student's Guide to Online Success

Cengage Learning E-LEARNING COMPANION serves as a resource and quick-reference guide for any course that demands technology skills. In addition to helping students adapt previously mastered skills--such as time management, note-taking, and critical thinking--to the online environment, this text shows students how social networking, cloud file storage, wikis, and blogs can be utilized appropriately and effectively in a college course. Technical terminology and how-to tutorials help students become more capable and flexible online learners, and build skills that will support them throughout college and their future careers. The Fourth Edition is fully updated to be current and relevant for today's online learning environments, and also includes new Workplace Applications, and coverage of

professional behavior and professional emails. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Virtual Teams in Higher Education

A Handbook for Students and Teachers

IAP In recent years, virtual teams have become a feature of most corporate workplaces, yet few academic programs prepare students to work in virtual teams, and few textbooks support the development of key skills for virtual teamwork. The primary purpose of this book is to enable higher education students to participate in virtual teams with students from other institutions, who potentially operate in different countries, time zones, and/or cultures. The book guides students through the process of working in virtual team projects for their classes, and helps them to engage with the learning experiences, and to respond to potential challenges. The book is directed towards students within any of the following disciplines: Business; Information Technology; Communication Studies; and Engineering. One section of the book also guides teachers through the process of organizing virtual team projects, and explores the teacher/teacher collaboration that is an inevitable consequence of organizing inter-institutional student virtual team projects. It provides advice for teachers on how to manage administrative challenges such as conflicting institutional schedules and grading mechanisms. In addition, it discusses research themes and data gathering and analysis techniques for teachers who wish to publish findings about the virtual team process and outcomes. As well as students and teachers, the book is also useful for researchers exploring any of the following themes: Technology use in virtual teams; Communication strategies and international communication in virtual teams; Communities of learning, e-learning, and virtual teams; Challenges of virtual teamwork; Planning a virtual team collaboration project; and Gathering and analyzing data about virtual collaboration.
