THE BMW 3 SERIES BOOK 1: DEFINING THE SPORTS SEDAN

FROM ORIGINS THROUGH THE E30 GENERATION

Since the invention of automobiles, there were sporty cars and there were practical cars. BMW engineers dared to design a car with features of both. In doing so, they created one of the classic cars of all time, the 3-Series. For over 40 years, this model has given its owner the joy of everyday driving. The commute to work suddenly was as much fun as track day. Follow the story of this category-creating car from the origins of its maker as a World War I airplane engine manufacturer until the hugely successful car it is today. This is the first of three books about the history of the 3-Series. It tells the tale of a failing German car company unable to find its way after World War II. A last-minute loan gave BMW one last chance. The company used that opportunity to create the Neue Klasse generation of cars in which we find the genetic origins of the 3-Series. In the 1970s, the world was reacting to a severe oil-shortage. Introduced just at this right time was the practical but sporty first generation of 3-Series, the E21. With the introduction of the E30, the second generation of the 3-Series, BMW took the success of this two-door coupe and ran with it, creating sedans, wagons, all-wheel drive vehicles and the M3 supercar.

INTRODUCING BIOMETRIC TECHNOLOGY IN ELECTIONS

International Institute for Democracy and Electoral Assistance (International IDEA) A credible voter register gives legitimacy to the electoral process and helps prevent electoral fraud. However, voter registration remains a complex and contested task. It is one of the most important activities that an electoral management body needs to conduct, but it is also one of the most costly in terms of both time and resources. Many countries that face challenges in creating an accurate voter register are considering reforming their voter registration systems through the introduction of biometric technologies. The drive towards biometrics has been facilitated by its largely apolitical nature. Investing in high-tech solutions allows stakeholders to demonstrate their commitment to resolving electoral problems. At the same time, expectations on biometric solutions may be exaggerated. This guide provides an overview of key concepts and considerations for all stakeholders involved in discussions about the application of biometrics in elections, both for voter registration before an election and for voter verification at polling stations on election day.
