## Transforming the Workforce for

# Children Birth Through Age 8

## A Unifying Foundation

*National Academies Press Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.*

## Manual for Survival

### A Chernobyl Guide for the Future

*Penguin UK Governments and journalists tell us that though Chernobyl was "the worst nuclear disaster in history," a reassuringly small number of people died (44), and nature recovered. Yet, drawing on a decade of fine-grained archival research and interviews in Ukraine, Russia, and Belarus, Kate Brown uncovers a much more disturbing story, one in which radioactive isotopes caused hundreds of thousands of casualties. Scores of Soviet scientists, bureaucrats, and civilians documented stunning increases in cases of birth defects, child mortality, cancers, and a multitude of prosaic diseases, which they linked to Chernobyl. Worried that this evidence would blow the lid on the effects of massive radiation release from weapons testing during the Cold War, international scientists and diplomats tried to bury or discredit it. A haunting revelation of how political exigencies shape responses to disaster, Manual for Survival makes clear the irreversible impact on every living thing not just from Chernobyl, but from eight decades of radiation from nuclear energy and weaponry.*

## Strategies to Improve Cardiac

# Arrest Survival

## A Time to Act

*National Academies Press Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.*

# Child Protective Services

## A Guide for Caseworkers

*From the Preface: This manual, Child Protective Services: A Guide for Caseworkers, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice. Readers are encouraged to begin with that*

manual as it addresses important information on which CPS practice is based—including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

## Forum on Investing in Young Children Globally

## A Synthesis of Nine Global Workshops Exploring Evidence- Based, Strategic Investments in Young Children

*National Academies Press Focusing on young children in a global context is an approach to end the cycle of poverty and improve the well-being of nations. Improving well-being necessarily begins with core elements such as health, education, nutrition, and social protection; many efforts to improve child development in the first decade of life focus on areas to meet young children's basic needs. Young children living in low-resourced settings are vulnerable to developmental and educational risk factors, such as stunting and undernutrition, disease, caregiver depression, lack of access to quality preprimary and primary education, disabilities, poverty, and societal and familial violence. While each of*

these areas is important for children's growth and development, there are potential increased benefits from integrated programs and coordinated policies that address more than one of these areas simultaneously, particularly for children living in low-resourced communities. An integrated and coordinated "all system" approach may be the best way to guarantee that children will have the prerequisites for healthy development. The Forum on Investing in Young Children Globally was established with the goal of integrating knowledge with action in regions around the world to inform evidence-based, strategic investments in young children, birth through age 8. The forum held nine workshops across five continents over 3 years. The goal was to learn from experiences in multiple regions and engage in culturally embedded dialogue. This publication summarizes the key themes from the presentations and discussions of the workshops.

*Basic Books* From #1 New York Times bestselling author Senator Elizabeth Warren and consultant Amelia Warren Tyagi, the classic book about America's middle class -- and why economic security remains out of reach for many. In this exposé, Elizabeth Warren and Amelia Warren Tyagi show that modern middle-class families are increasingly trapped by the grinding reality of flat wages and rising costs. Warren and Tyagi reveal how a ferocious bidding war for housing and education has silently engulfed America's suburbs, driving up the cost of keeping families in the middle class, and placing unprecedented pressure on hard-working families. Revolutionary when it was first published in 2003, *The Two-Income Trap* remains disturbingly relevant today. Now with a new introduction by the authors, *The Two Income Trap* shows why the usual remedies won't solve the problem and points toward the policy changes that would create better opportunities for both parents and children.
