KEY QUESTIONS IN URBAN PEST MANAGEMENT

A STUDY AND REVISION GUIDE

CABI Urban pests are common all over the world. These include cockroaches, flies, mosquitoes, bed bugs, ticks, fleas, ants, termites, rodents and others. These pests thrive in human structures, where there is food, warmth and places to hide. Urban pests are one of the leading causes of illnesses in humans due to allergies, bites, food contamination and phobias. They can also cause significant damage to property and structures. Knowledge and training in this field is vital for professional and trainee pest managers. This book is specifically intended to provide an aid to such candidates. The book contains 500 multiple-choice questions (and answers) grouped into major topic areas.

INTRODUCTION TO INTEGRATED PEST MANAGEMENT

Springer Science & Business Media Integrated control of pests was practiced early in this century, well before anyone thought to call it "integrated control" or, still later, "integrated pest management" (IPM), which is the subject of this book by Mary Louise Flint and the late Robert van den Bosch. USDA entomologists W. D. Hunter and B. R. Coad recommended the same principles in 1923, for example, for the control of boll weevil on cotton in the United States. In that program, selected pest-tolerant varieties of cotton and residue destruction were the primary means of control, with insecticides considered supplementary and to be used only when a measured incidence of weevil damage occurred. Likewise, plant pathologists had also developed disease management programs incorporating varietal selection and cultural procedures, along with minimal use of the early fungicides, such as Bordeaux mixture. These and other methods were practiced well before modern chemical control technology had developed. Use of chemical pesticides expanded greatly in this century, at first slowly and then, following the launching of DDT as a broadly successful insecticide, with rapidly increasing momentum. In 1979, the President's Council on Environmental Quality reported that production of synthetic organic pesticides had increased from less than half a million pounds in 1951 to about 1.4 billion pounds-or about 3000 times as much-in 1977.

ECOLOGICALLY BASED PEST MANAGEMENT

NEW SOLUTIONS FOR A NEW CENTURY

National Academies Press Widespread use of broad-spectrum chemical pesticides has revolutionized pest management. But there is growing concern about environmental contamination and human health risks--and continuing frustration over the ability of pests to develop resistance to pesticides. In *Ecologically Based Pest Management*, an expert committee advocates the sweeping adoption of ecologically based pest management (EBPM) that promotes both agricultural productivity and a balanced ecosystem. This volume offers a vision and strategies for creating a solid, comprehensive knowledge base to support a pest management system that incorporates ecosystem processes supplemented by a continuum of inputs--biological organisms, products, cultivars, and cultural controls. The result will be safe, profitable, and durable pest management strategies. The book evaluates the feasibility of EBPM and examines how best to move beyond optimal examples into the mainstream of agriculture. The committee stresses the need for information, identifies research priorities in the biological as well as socioeconomic realm, and suggests institutional structures for a multidisciplinary research effort. *Ecologically Based Pest Management* addresses risk assessment, risk management, and public oversight of EBPM. The volume also overviews the history of pest management--from the use of sulfur compounds in 1000 B.C. to the emergence of transgenic technology. *Ecologically Based Pest Management* will be vitally important to the agricultural industry; policymakers, regulators, and scientists in agriculture and forestry; biologists, researchers, and environmental advocates; and interested growers.

CYBER-PHYSICAL SECURITY

PROTECTING CRITICAL INFRASTRUCTURE AT THE STATE AND LOCAL LEVEL

Springer This book focuses on the vulnerabilities of state and local services to cyber-threats and suggests possible protective action that might be taken against such threats. Cyber-threats to U.S. critical infrastructure are of growing concern to policymakers, managers and consumers. Information and communications technology (ICT) is ubiquitous and many ICT devices and other components are interdependent; therefore, disruption of one component may have a negative, cascading effect on others. Cyber-attacks might include denial of service, theft or manipulation of data. Damage to critical infrastructure through a cyber-based attack could have a significant impact on the national security, the economy, and

the livelihood and safety of many individual citizens. Traditionally cyber security has generally been viewed as being focused on higher level threats such as those against the internet or the Federal government. Little attention has been paid to cyber-security at the state and local level. However, these governmental units play a critical role in providing services to local residents and consequently are highly vulnerable to cyber-threats. The failure of these services, such as waste water collection and water supply, transportation, public safety, utility services, and communication services, would pose a great threat to the public. Featuring contributions from leading experts in the field, this volume is intended for state and local government officials and managers, state and Federal officials, academics, and public policy specialists.

POLLINATORS AND PESTICIDES

SEVENTH REPORT OF SESSION 2012-13, VOL. 1: REPORT, TOGETHER WITH FORMAL MINUTES, ORAL AND WRITTEN EVIDENCE

The Stationery Office If farmers had to pollinate fruit and vegetables without the help of insects it would cost hundreds of millions of pounds and we would all be stung by rising food prices. Defra Ministers, however, have refused to back EU efforts to protect pollinators. Disease, habitat loss and climate change can all affect insect populations, but a growing body of research suggests that neonicotinoids are having an especially damaging impact on pollinators. The weight of scientific evidence now warrants precautionary action, so the Committee is calling for a moratorium on pesticides linked to bee decline to be introduced by 1 January next year. An EU-wide moratorium on the use of imidacloprid, clothianidin and TMX on crops attractive to bees, following a recent risk warning from the European Food Safety Authority, has also been proposed. Many of the UK's largest garden retailers have voluntarily withdrawn non-professional plant protection products that contain neonicotinoids. A full ban on the sale of neonicotinoids for public domestic use, which could create an urban safe haven for pollinators is recommended. The pesticide industry must open itself to greater academic scrutiny if it wants to justify its continued opposition to the precautionary protection of pollinators. The Government's National Action Plan for the Sustainable Use of Pesticides published earlier this year was a missed opportunity, according to the Committee. Clearer targets are needed to reduce reliance on pesticides as far as possible. And Integrated Pest Management - which emphasises alternatives to pesticides, but does not preclude their use - should be made the central principle of the plan.

INTEGRATED PEST MANAGEMENT OF MAJOR PESTS AND DISEASES IN EASTERN EUROPE AND THE CAUCASUS

Food & Agriculture Org. The Integrated Pest Management IPM is an ecosystem approach to managing pests through understanding the crop ecosystem as a basis of good crop management decisions and support the sustainable intensification of crop production and pesticide risk reduction. Often, low levels of populations of some pests are needed to keep natural enemies in the field and the aim of IPM is to reduce pest populations to avoid damage levels that cause yield loss. The IPM is still directly associated with pests and defined as a knowledge-intensive process of decision making that combines various strategies (biological, cultural, physical and chemical, regular field monitoring of the crops etc.) that focuses on reduction of pesticide use to sustainably manage dangerous pests. This book is intended to guide farmers in the integrated management of pest and diseases, helping them with decision making. It provides a description of the most dangerous pests and diseases, including symptoms, possible location, types of plants, biology as well as ways of monitoring. It also describes the main components of specific Integrated Pest Management.

INTEGRATED PEST MANAGEMENT (IPM) FARMER FIELD SCHOOL (FFS)

A GUIDE FOR FACILITATORS OF FFS ON MAIZE WITH SPECIAL EMPHASIS ON FALL ARMYWORM

Food & Agriculture Org. Maize is most important food crop after rice and wheat contributing towards national food security with an annual production of 28.7 million metric tonnes. The

major maize producing states are Karnataka, Madhya Pradesh, Rajasthan Maharashtra and Andhra Pradesh. Maize is a relatively less water demanding crop and gives higher yield /hectare as compared to other cereals. Due to development of newer varieties which are tolerant to extreme temperatures, the area under maize cultivation is increasing in northern parts of India. In India about 15 million farmers are engaged in farming and processing of maize. The recent invasion of Fall Armyworm (FAW) is causing wide economic damage to maize farmers. The pest is new to India. Hence, it is important to understand its behaviour in the agro ecosystem and its interactions with predators, parasitoids and entomopathogens in diverse agro ecosystem. Thus, this illustrative guide on IPM-FFS has been developed by FAO and Directorate of Plant protection Quarantine & Storage (DPPQS), MoAFW for promoting IPM in maize cultivation with special emphasis on FAW management. This is an output of FAO's project titled, "Time critical measures to support early warning and monitoring for sustainable management of Fall Armyworm in India".

The Mad Lover About the Book: The Most Dangerous Game, also published as The Hounds of Zaroff, is a short story by Richard Connell first published in Collier's magazine on January 19, 1924. It features a big-game hunter from New York who falls off a yacht and swims to an isolated island in the Caribbean where he is hunted by a Cossack aristocrat. The story is an adaptation of the big-game hunting safaris in Africa and South America that were fashionable among wealthy Americans in the 1920s. Big-game hunter Sanger Rainsford and his friend, Whitney, are traveling to the Amazon rainforest for a jaguar hunt. After a discussion about how they are "the hunters" instead of "the hunted," Whitney goes to bed and Rainsford hears gunshots. He climbs onto the yacht's rail and accidentally falls overboard, swimming to Ship-Trap Island, which is notorious for shipwrecks. On the island, he finds a palatial chateau inhabited by two Cossacks: the owner, General Zaroff, and his gigantic deaf-mute servant, Ivan. Zaroff, another big-game hunter, knows of Rainsford from his published account of hunting snow leopards in Tibet. Over dinner, the middle-aged Zaroff explains that although he has been hunting animals since he was a boy, he has decided that killing big-game has become boring for him, so after escaping the Russian Revolution he moved to Ship-Trap Island and set it up to trick ships into wrecking themselves on the jagged rocks that surround it. He takes the survivors captive and hunts them for sport, giving them food, clothing, a knife, and a three-hour head start, and using only a small-caliber pistol for himself. Any captives who can elude Zaroff, Ivan, and a pack of hunting dogs for three days are set free. He reveals that he has won every hunt to date. Captives are offered a choice between being hunted or turned over to Ivan, who once served as official knouter for The Great White Czar. Rainsford denounces the hunt as barbarism, but Zaroff replies by claiming that "life is for the strong." Realizing he has no way out, Rainsford reluctantly agrees to be hunted. During his head start, Rainsford lays an intricate trail in the forest and then climbs a tree. Zaroff finds him easily, but decides to play with him as a cat would with a mouse, standing underneath the tree Rainsford is hiding in, smoking a cigarette, and then abruptly departing. After the failed attempt at eluding Zaroff, Rainsford builds a Malay man-catcher, a weighted log attached to a trigger. This contraption injures Zaroff's shoulder, causing him to return home for the night, but he shouts his respect for the trap before departing. The next day Rainsford creates a Burmese tiger pit, which kills one of Zaroff's hounds. He sacrifices his knife and ties it to a sapling to make another trap, which kills Ivan when he stumbles into it. To escape Zaroff and his approaching hounds, Rainsford dives off a cliff into the sea; Zaroff, disappointed at Rainsford's apparent suicide, returns home. Zaroff smokes a pipe by his fireplace, but two issues keep him from the peace of mind: the difficulty of replacing Ivan and the uncertainty of whether Rainsford perished in his dive. About the Author : Richard Edward Connell, Jr. was an American author and journalist, best known for his short story "The Most Dangerous Game." Connell was one of the best-known American short story writers of his time and his stories appeared in the Saturday Evening Post and Collier's Weekly. Connell had equal success as a journalist and screenwriter. He was nominated for an Academy Award in 1942 for best original story for the film Meet John Doe.

THE LITTLE BOOK OF RESTORATIVE JUSTICE

REVISED AND UPDATED

Simon and Schuster Howard Zehr is the father of Restorative Justice and is known worldwide for his pioneering work in transforming understandings of justice. Here he proposes workable principles and practices for making Restorative Justice possible in this revised and updated edition of his bestselling, seminal book on the movement. (The original edition has sold more than 110,000 copies.) Restorative Justice, with its emphasis on identifying the justice needs of everyone involved in a crime, is a worldwide movement of growing influence that is helping victims and communities heal, while holding criminals accountable for their actions. This is not soft-on-crime, feel-good philosophy, but rather a concrete effort to bring justice and healing to everyone involved in a crime. In *The Little Book of Restorative Justice*, Zehr first explores how restorative justice is different from criminal justice. Then, before letting those appealing observations drift out of reach into theoretical space, Zehr presents Restorative Justice practices. Zehr undertakes a massive and complex subject and puts it in graspable form, without reducing or trivializing it. This resource is also suitable for academic classes and workshops, for conferences and trainings, as well as for the layperson interested in understanding this innovative and influential movement.
