Authoring Books and Technical Documents with R Markdown

CRC Press bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on [GitHub](#).

Fluid Dynamics

Fundamentals and Applications

Springer Nature This introductory book addresses a broad range of classical Fluid Dynamics topics, interesting applications, and related problems in everyday life. The geophysical and astrophysical applications discussed concern e.g. the shape and internal structure of the Earth and stars, the dynamics of the atmosphere and ocean, hydrodynamic instabilities, and the different kinds of waves that can be found in the atmosphere, ocean and solid Earth. Non-linear waves (solitons) are also mentioned. In turn, the book explores problems from everyday life, including the motion of golf balls, life at low Reynolds numbers, the physics of sailing, and the aerodynamics of airplanes and Grand Prix cars. No book on this topic would be complete without a look at chaos and turbulence; here the problems span from Gaussian plumes to chaotic dynamos, to stochastic climate modeling. Advances in fluid dynamics have produced a wealth of numerical methods and techniques, which are used in many of the applications. Given its structure, the book can be used both for an introductory course to fluid dynamics and as preparation for more advanced problems typical of graduate-level courses.

A Handbook of Theories on Designing Alignment Between People and the Office Environment

Routledge Although workplace design and management are gaining more and more attention from modern organizations, workplace research is still very fragmented and spread across multiple disciplines in academia. There are several books on the market related to workplaces, facility management (FM), and corporate real estate management (CREM) disciplines, but few open up a theoretical and practical discussion across multiple theories from different fields of studies. Therefore, workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied. A lot of knowledge is lost between disciplines, and sadly, many insights do not reach workplace managers in practice. Therefore, this new book series is started by associate professor Rianne Appel-Meulenbroek (Eindhoven University of Technology, the Netherlands) and postdoc researcher Vitalija Danivska (Aalto University, Finland) as editors, published by Routledge. It is titled 'Transdisciplinary Workplace Research and Management' because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice. The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace-related issues in practice, such as knowledge worker productivity, office use, and more strategic workplace management. In addition, the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice. This book series is relevant for workplace experts both in academia and industry. This first book in the series focuses on the employee as a user of the work environment. The 21 theories discussed and applied to workplace design in this book address people's ability to do their job and thrive in relation to the office workplace. Some focus more on explaining why people behave the way they do (the psychosocial environment), while others take the physical and/or digital workplace quality as a starting point to explain employee outcomes such as health, satisfaction, and performance. They all explain different aspects for achieving employee-workplace alignment (EWA) and thereby ensuring employee thriving. The final chapter describes a first step towards integrating these theories into an overall interdisciplinary framework for eventually developing a grand EWA theory. Ethics, Politics and Justice in Dante

UCL Press Ethics, Politics and Justice in Dante presents new research by international scholars on the themes of ethics, politics and justice in the works of Dante Alighieri, including chapters on Dante's modern 'afterlife'. Together the chapters explore how Dante's writings engage with the contemporary culture of medieval Florence and Italy, and how and why his political and moral thought still speaks compellingly to modern readers. The collection's contributors range across different disciplines and scholarly traditions – history, philology, classical reception, philosophy, theology – to scrutinise Dante's Divine Comedy and his other works in Italian and Latin, offering a multi-faceted approach to the evolution of Dante's political, ethical and legal thought throughout his writing career. Certain chapters focus on his early philosophical Convivio and on the accomplished Latin Eclogues of his final years, while others tackle knotty themes relating to judgement, justice, rhetoric and literary ethics in his Divine Comedy, from hell to paradise. The closing chapters discuss different modalities of the public reception and use of Dante's work in both Italy and Britain, bringing the volume's emphasis on morality, political philosophy, and social justice into the modern age of the nineteenth, twentieth, and twenty-first centuries.

Trauma Induced Coagulopathy

Springer Nature The first edition of this publication was aimed at defining the current concepts of trauma induced coagulopathy by critically analyzing the most up-to-date studies from a clinical and basic science perspective. It served as a reference source for any clinician interested in reviewing the pathophysiology, diagnosis, and management of the coagulopathic trauma patient, and the data that supports it. By meticulously describing the methodology of most traditional as well as state of the art coagulation assays the reader is provided with a full understanding of the tests that are used to study trauma induced coagulopathy. With the growing interest in understanding and managing coagulation in trauma, this second edition has been expanded to 46 chapters from its original 35 to incorporate the massive global efforts in understanding, diagnosing, and treating trauma induced coagulopathy. The evolving use of blood products as well as recently introduced hemostatic medications is reviewed in detail. The text provides therapeutic strategies to treat specific coagulation abnormalities following severe injury, which goes beyond the first edition that largely was based on describing the mechanisms causing coagulation abnormalities. Trauma Induced Coagulopathy 2nd Edition is a valuable reference to clinicians that are faced with specific clinical challenges when managing coagulopathy.

Writing about Lives in Science

(Auto)Biography, Gender, and Genre

Vandenhoeck & Ruprecht Following discussions on scientific biography carried out over the past few decades, this book proposes a kaleidoscopic survey of the uses of biography as a tool to understand science and its context. It offers food for thought on the role played by the gender of the biographer and the biographee in the process of writing. To provide orientation in such a challenging field, some of the authors have accepted to write about their own professional experience while reflecting on the case studies they have been working on. Focusing on (auto)biography may help us to build bridges between different approaches to men and women's lives in science. The authors belong to a variety of academic and professional fields, including the history of science, anthropology, literary studies, and science journalism. The period covered spans from 1732, when Laura Bassi was the first woman to get a tenured professorship of physics, to 2009, when Elizabeth H. Blackburn and Carol W. Greider were the first women's team to have won a Nobel Prize in science.

Lina Bo Bardi, Drawings

Princeton University Press The first authoritative collection of drawings by legendary modern architect Lina Bo Bardi Lina Bo Bardi (1914–92) was one of the most prolific and visionary architects of the twentieth century. Raised in Italy under Mussolini's Fascist regime and emigrating to Brazil after World War II, she championed the power of architecture and design to embrace everyday life. Her boldly modernist designs range from concrete-and-glass structures like the São Paulo Museum of Art and the culture and leisure center SESC Pompéia to furniture and jewelry. This is the first book to examine one of the most intimate and expressive features of her life and work, but one she rarely shared with the public—drawing. Bo Bardi produced thousands of drawings in her lifetime, from picturesque landscapes drawn when she was a child, to sketches made as part of her daily routine as an architect, to fanciful drawings that show different aspects of her private life. In this beautifully illustrated book, Zeuler Lima, the world's leading authority on Bo Bardi, brings together a careful selection of these and other drawings, many of them never published until now. Bo Bardi drew on card stock, tracing paper, regular paper, and newsprint. She used pencils, watercolor, gouache, ballpoint pens, and felt-tips, producing drawings that combined surrealist elements with an eye for color and joyful forms. Lina Bo Bardi, Drawings sheds critical light on the creative sensibility behind some of the twentieth century's most striking modernist designs, and provides a rare window into the design practice of an architect like no other. Published in association with the Fundació Joan Miró Exhibition schedule: Fundació Joan Miró, Barcelona February 15–May 19, 2019

Endocrine Immunology

Karger Medical and Scientific Publishers In the last decades, several in vitro and in vivo studies have revealed the existence of a very complex network between the neuroendocrine and immune system. Important molecular mechanisms underlying these interactions, in both physiological and pathological conditions, have also been described. Indeed, hormones play a pivotal role in the development and functional regulation of the immune system – both innate and acquired responses. Immune system cells present specific hormone receptors and themselves produce some hormones, thus influencing hormone secretion. More recently, the modulation of hormone secretion has been attempted for treating associated autoimmune disorders, further supporting the strong interplay between the endocrine and immune system. Distinguished experts, who have published extensively in their fields, have contributed comprehensive chapters to this volume. The focus is on the various aspects of endocrine-neuro-immune connections, providing an updated panorama - from basics to clinical applications - of current knowledge and still debated issues.

Peano

Life and Works of Giuseppe Peano

Springer Science & Business Media All students of mathematics know of Peano's postulates for the natural numbers and his famous space-filling curve, yet their knowledge often stops there. Part of the reason is that there has not until now been a full-scale study of his life and works. This must surely be surprising, when one realizes the length of his academic career (over 50 years) and the extent of his publications (over 200) in a wide variety of fields, many of which had immediate and long-term effects on the development of modern mathematics. A study of his life seems long overdue. It appeared to me that the most likely person to write a biography of Peano would be his devoted disciple Ugo Cassina, with whom I studied at the University of Milan in 1957-58. I wrote to Professor Cassina on 29 October, 1963, inquiring if he planned to write the biography, and I offered him my assistance, since I hoped to return to Italy for a year. He replied on 28 November, 1963, suggesting that we collaborate, meaning by this that I would write the biography, in English, using his material and advice. I gladly agreed to this suggestion, but work on the project had hardly begun when Professor Cassina died unexpectedly on 5 October, 1964. I then decided to continue the project on my own. I spent the academic year 1966-67 in Turin; completion of the book took ten years.
