# The Algorithmic Beauty of Plants

**Springer Science & Business Media** Now available in an affordable softcover edition, this classic in Springer's acclaimed Virtual Laboratory series is the first comprehensive account of the computer simulation of plant development. 150 illustrations, one third of them in colour, vividly demonstrate the spectacular results of the algorithms used to model plant shapes and developmental processes. The latest in computer-generated images allow us to look at plants growing, self-replicating, responding to external factors and even mutating, without becoming entangled in the underlying mathematical formulae involved. The authors place particular emphasis on Lindenmayer systems - a notion conceived by one of the authors, Aristid Lindenmayer, and internationally recognised for its exceptional elegance in modelling biological phenomena. Nonetheless, the two authors take great care to present a survey of alternative methods for plant modelling.

## 3D Angiographic Atlas of Neurovascular Anatomy and Pathology

**Cambridge University Press** The *3D Angiographic Atlas of Neurovascular Anatomy and Pathology* is the first atlas to present neurovascular information and images based on catheter 3D rotational angiographic studies. The images in this book are the culmination of work done by Neil M. Borden over several years using one of the first 3D neurovascular angiographic suites in the United States. With the aid of this revolutionary technology, Dr Borden has performed numerous diagnostic neurovascular angiographic studies as well as endovascular neurosurgical procedures. The spectacular 3D images he obtained are extensively labeled and juxtaposed with conventional 2D angiograms for orientation and comparison. Anatomical color drawings and concise descriptions of the major intracranial vascular territories further enhance understanding of the complex cerebral vasculature.
