Shadow Education in the Middle East

Private Supplementary Tutoring and its Policy Implications

Taylor & Francis This volume offers insights into the role of private supplementary tutoring in the Middle East, and its far-reaching implications for social structures and mainstream education. Around the world, increasing numbers of children receive private tutoring to supplement their schooling. In much of the academic literature this is called shadow education because the content of tutoring commonly mimics that of schooling: as the curriculum changes in the schools, so it changes in the shadow. While much research and policy attention has focused on private tutoring in East Asia and some other world regions, less attention has been given to the topic in the Middle East. Drawing on both Arabic-language and English-language literature, this study commences with the global picture before comparing patterns within and among 12 Arabic-speaking countries of the Middle East. It presents the educational and cultural commonalities amongst these countries, examines the drivers of demand and supply of shadow education, and considers the dynamics of tutoring and how it impacts on education in schools. In addition to its pertinence within the Middle East itself, the book will be of considerable interest to academics and education policy makers broadly concerned with changing roles of the state and private sectors in education. The Open Access version of this book, available at www.taylorfrancis.com, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

Mathematical Mindsets

Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching

John Wiley & Sons Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.

Smashing Strategic Business Management: How to Pass the ACA SBM Examination 2019

Smashing SBM is based around the same approach as our successful and best-selling Cracking Case book: practical, student-focused and simple advice on what to do to pass an unusual examination in which time management and

examination technique are the key to success. This new 2019 edition has been fully updated for the new syllabus as well as for the key learning points raised by the 2018 ICAEW past papers. Given the relatively low number of questions in each SBM examination (just 2) and the very open nature of the requirements, it is vital that you have a way of determining which areas are important and which issues are going to attract fewer marks. Smashing SBM sets out an effective planning methodology (which we call MAPs) that helps you predict the mark allocation of sub-parts of a question and allocate your time effectively. Our MAPs give direction to your answer by providing reminders on how to assess the likely mark allocation whilst also reminding you of key things to do in Q1 and Q2, based on our review of examiner comments. Smashing SBM also contains very detailed reviews of the 10 ICAEW past papers set to date with a view to understanding patterns in the question format and content, as well as the mark allocation. Smashing SBM includes detailed revision of key financial management and business strategy topics, as assessed in the real examination papers and ICAEW SBM Mock exams. We have also included selected questions from our Business Strategy and Financial Management Q&A books to help you revise these areas very quickly. The book also contains detailed notes on the Specialist Audit & Assurance topics which are examinable at the Advanced Level. Our revision notes focus on areas other than statutory audit as we know that around 10% of the marks will be for these specialised areas such as Internal Audit, Agreed Upon Procedures, review of prospective information and so on. Smashing SBM contains detailed revision of ethics, including various ethical frameworks, to help you achieve the 5-10% of marks available for ethics in SBM. Smashing SBM is designed to pair up with its sister publication, SBM Exam Room Notes 2019, which offers clear, alphabetically-referenced sets of notes on all key SBM topics to provide exam room reminders of mark-scoring points - perfect for avoiding exam room panic! Full chapter listing of Smashing SBM: PART ONE - How to Plan 1. Introduction: This Book and Why We Wrote It 2. Overview of Smashing SBM: Chapter by Chapter 3. Teaching History in a Neoliberal Age

Policy, Agency and Teacher Voice

Routledge This book explores changing practice in history classrooms from the autonomy of the 1980s through the introduction of GCSEs and the National Curriculum to the prescription of the National Strategies and the pervasive influence of league tables in the first decade of the twenty-first century. It uses individual narratives from history

teachers to shed light on a changing profession. Showcasing research that is crucial reading for leaders in education, it uses oral accounts from 13 experienced teachers to provide a rich testimony of the constraints and affordances acting on history teachers. The book offers a unique perspective to show how teachers experienced steady but substantial changes in policy and autonomy and how this affected their practice; this detail enhances an analysis of policy and curricular documents across three decades. The findings are crucial for educational settings today, facing crises of teacher recruitment and teacher retention. This book will be of great interest to academics and higher degree research students in history education, history of education and education policy. It will also be of interest to beginning history teachers and senior school leaders responsible for teacher development and curriculum.

Mathematics for Machine Learning

Cambridge University Press The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.
