---

## 2021 HOME AND GARDEN EDITION

---

**University of Georgia Press** The Georgia Pest Management Handbook provides current information on selection, application, and safe use of pest control chemicals. This handbook has recommendations for pest control around homes and on pets; for pests of home garden vegetables, fruits, and ornamentals; and for pests of public health interest associated with our homes. Cultural, biological, physical, and other types of control are recommended where appropriate. Pesticide recommendations are based on information on the manufacturer labels and on performance data from research and extension trials at the University of Georgia and its sister institutions. Because environmental conditions, the severity of pest pressure, and methods of application vary widely, recommendations do not imply that performance of pesticides will always be acceptable. This publication is intended to be used only as a guide. Trade and brand names are used only for information. The University of Georgia does not guarantee nor warrant published standards on any product mentioned; nor does the use of a trade or brand name imply approval of any product to the exclusion of others that may also be suitable. Always follow the use instructions and precautions on the pesticide label. For questions, concerns, or improvement suggestions regarding the Georgia Pest Management Handbook, please contact your county agent.

## **NEW SOLUTIONS FOR A NEW CENTURY**

---

**National Academies Press** Widespread use of broad-spectrum chemical pesticides has revolutionized pest management. But there is growing concern about environmental contamination and human health risks--and continuing frustration over the ability of pests to develop resistance to pesticides. In *Ecologically Based Pest Management*, an expert committee advocates the sweeping adoption of ecologically based pest management (EBPM) that promotes both agricultural productivity and a balanced ecosystem. This volume offers a vision and strategies for creating a solid, comprehensive knowledge base to support a pest management system that incorporates ecosystem processes supplemented by a continuum of inputs--biological organisms, products, cultivars, and cultural controls. The result will be safe, profitable, and durable pest management strategies. The book evaluates the feasibility of EBPM and examines how best to move beyond optimal examples into the mainstream of agriculture. The committee stresses the need for information, identifies research priorities in the biological as well as socioeconomic realm, and suggests institutional structures for a multidisciplinary research effort. *Ecologically Based Pest Management* addresses risk assessment, risk management, and public oversight of EBPM. The volume also overviews the history of pest management--from the use of sulfur compounds in 1000 B.C. to the emergence of transgenic technology. *Ecologically Based Pest Management* will be vitally important to the agrichemical industry; policymakers, regulators, and scientists in agriculture and forestry; biologists, researchers, and environmental advocates; and interested growers.

## **INTEGRATED PEST MANAGEMENT OF MAJOR PESTS AND DISEASES IN EASTERN EUROPE AND THE CAUCASUS**

---

**Food & Agriculture Org.** The Integrated Pest Management IPM is an ecosystem approach to managing pests through understanding the crop ecosystem as a basis of good crop management decisions and support the sustainable intensification of crop production and pesticide risk reduction. Often, low levels of populations of some pests are needed to keep natural enemies in the field and the aim of IPM is to reduce pest populations to avoid damage levels that cause yield loss. The IPM is still directly associated with pests and defined as a knowledge-intensive process of decision making that combines various strategies (biological, cultural, physical and chemical, regular field monitoring of the crops etc.) that focuses on reduction of pesticide use to sustainably manage dangerous pests. This book is intended to guide farmers in the integrated management of pest and diseases, helping them with decision making. It provides a description of the most dangerous pests and diseases, including symptoms, possible location, types of plants, biology as well as ways of monitoring. It also describes the main components of specific Integrated Pest Management.

---

## **INTRODUCTION TO INTEGRATED PEST MANAGEMENT**

---

**Springer Science & Business Media** Integrated control of pests was practiced

early in this century, well before anyone thought to call it "integrated control" or, still later, "integrated pest management" (IPM), which is the subject of this book by Mary Louise Flint and the late Robert van den Bosch. USDA entomologists W. D. Hunter and B. R. Coad recommended the same principles in 1923, for example, for the control of boll weevil on cotton in the United States. In that program, selected pest-tolerant varieties of cotton and residue destruction were the primary means of control, with insecticides considered supplementary and to be used only when a measured incidence of weevil damage occurred. Likewise, plant pathologists had also developed disease management programs incorporating varietal selection and cultural procedures, along with minimal use of the early fungicides, such as Bordeaux mixture. These and other methods were practiced well before modern chemical control technology had developed. Use of chemical pesticides expanded greatly in this century, at first slowly and then, following the launching of DDT as a broadly successful insecticide, with rapidly increasing momentum. In 1979, the President's Council on Environmental Quality reported that production of synthetic organic pesticides had increased from less than half a million pounds in 1951 to about 1.4 billion pounds-or about 3000 times as much-in 1977.

### **STERILE INSECT TECHNIQUE**

---

---

#### **PRINCIPLES AND PRACTICE IN AREA-WIDE INTEGRATED PEST MANAGEMENT**

---

**CRC Press** The sterile insect technique (SIT) is an environment-friendly method of pest control that integrates well into area-wide integrated pest management (AW-IPM) programmes. This book takes a generic, thematic, comprehensive, and global approach in describing the principles and practice of the SIT. The strengths and weaknesses, and successes and failures, of the SIT are evaluated openly and fairly from a scientific perspective. The SIT is applicable to some major pests of plant-, animal-, and human-health importance, and criteria are provided to guide in the selection of pests appropriate for the SIT. In the second edition, all aspects of the SIT have been updated and the content considerably expanded. A great variety of subjects is covered, from the history of the SIT to improved prospects for its future application. The major chapters discuss the principles and technical components of applying sterile insects. The four main strategic options in using the SIT — suppression, containment, prevention, and eradication — with examples of each option are described in detail. Other chapters deal with supportive technologies, economic, environmental, and management considerations, and the socio-economic impact of AW-IPM programmes that integrate the SIT. In addition, this second edition includes six new chapters covering the latest developments in the technology: managing pathogens in insect mass-rearing, using symbionts and modern molecular technologies in support of the SIT, applying post-factory nutritional, hormonal, and semiochemical treatments, applying the SIT to eradicate outbreaks of invasive pests, and using the SIT against mosquito vectors of disease. This book will be useful reading for students in animal-, human-, and plant-health courses. The in-depth reviews of all aspects of the SIT and its integration into AW-IPM programmes, complete with extensive lists of scientific references, will be of great value to researchers, teachers, animal-, human-, and plant-health practitioners, and policy makers.

## **MANAGERS NOT MBAS**

---

### **A HARD LOOK AT THE SOFT PRACTICE OF MANAGING AND MANAGEMENT DEVELOPMENT**

---

**Berrett-Koehler Publishers** In this sweeping critique of how managers are educated and how, as a consequence, management is practiced, Henry Mintzberg offers thoughtful and controversial ideas for reforming both. "The MBA trains the wrong people in the wrong ways with the wrong consequences," Mintzberg writes. "Using the classroom to help develop people already practicing management is a fine idea, but pretending to create managers out of people who have never managed is a sham." Leaders cannot be created in a classroom. They arise in context. But people who already practice management can significantly improve their effectiveness given the opportunity to learn thoughtfully from their own experience. Mintzberg calls for a more engaging approach to managing and a more reflective approach to management education. He also outlines how business schools can become true schools of management.
