EDUCATION AS CULTIVATION IN CHINESE CULTURE

Springer Given the increasing global interest in Chinese culture, this book uses case studies to describe and interpret Chinese cultivation in contemporary Taiwanese schools. Cultivation is a concept unique to Chinese culture and is characterized by different attitudes towards teaching and learning compared to Western models of education. The book starts with a discussion of human nature in Chinese schools of philosophy and levels of goodness. Following the philosophical background is a presentation of how cultivation is practiced in Chinese culture from prenatal through high school education. The case studies focus both on how students are cultivated as they become members of Chinese society, and on what role teachers play in cultivating the children in school. In addition, supports from Chinese educational institutions, including public schools, families, and organizations such as private cram schools, are introduced and explained. In closing, the book presents a critique of the modern school reform movement and the conflicts between the reform proposals and traditional practices. Based on the collective work of Taiwanese researchers in the fields of education, history and anthropology, the book identifies the purpose of education as cultivating virtue in a process of creating an ideal person who serves society, and describes the way teachers have carried on this tradition despite its faltering status in contemporary educational discourse and in the face of reform movements.

RESOLVED

DEBATE CAN REVOLUTIONIZE EDUCATION AND HELP SAVE OUR DEMOCRACY

Brookings Institution Press Adopting a simple education reform to restore civil discourse and transform American society In this era of extreme political polarization, it's tempting to believe nothing can be done to heal a nation that is so obviously divided and led by dysfunctional politicians. But there is a relatively simple and powerful way to begin the healing, and at the same time prepare the next generations of leaders for the rigorous demands of a constantly changing economy and society. The solution offered by this intriguing book is for schools across the country to focus on developing in students the skills of successful debaters. These are the skills—so clearly lacking in contemporary society—of listening and persuading, through civil discourse backed by fact-based evidence and reason. Resolved explains how one simple educational reform can help address the nation's political divide and at the same time help ensure that today's young people will actually enjoy learning, and thus will have the necessary skills to lead productive and economically rewarding lives. The book offers practical ideas about a positive future for parents, educators, state legislators, business leaders—in fact, anyone interested in how debate-centered education can fundamentally change the country for the better.

APPROACHING THE NUCLEAR TIPPING POINT

COOPERATIVE SECURITY IN AN ERA OF GLOBAL CHANGE

Rowman & Littlefield Globalization and technology have created new challenges to national governments. As a result, they now must share power with other entities, such as regional and global organizations or large private economic units. In addition, citizens in most parts of the world have been empowered by the ability to acquire and disseminate information instantly. However this has not led to the type of international cooperation essential to deal with existential threats. Whether governments can find ways to cooperate in the face of looming threats to the survival of human society and our environment has become one of the defining issues of our age. A struggle between renewed nationalism and the rise of a truly global society is underway, but neither global nor regional institutions have acquired the skills and authority needed to meet existential threats, such as nuclear proliferation. Arms control efforts may have reduced the excesses of the Cold War, but concepts and methodologies for dealing with the nuclear menace have not kept up with global change. In addition, governments have shown surprisingly little interest in finding new ways to manage or eliminate global and regional competition in acquiring more or better nuclear weapons systems. This book explains why nuclear weapons still present existential dangers to humanity and why engagement by the United States with all states possessing nuclear weapons remains necessary to forestall a global catastrophe. The terms of engagement, however, will have to be different than during the Cold War. Technology is developing rapidly, greatly empowering individuals, groups, and nations. This can and should be a positive development, improving health, welfare, and quality of life for all, but it can also be used for enormous destruction. This book reaches beyond the military issues of arms control to analyze the impact on international security of changes in the international system and defines a unique cooperative security agenda.

WEAPONISATION OF SPACE: AN INEVITABLE REALITY AND PLAUSIBLE FALLOUT

AN INEVITABLE REALITY AND PLAUSIBLE FALLOUT

KW Publishers Pvt Ltd Militarily, use of spacebased assets, when integrated with operations, assumes importance as one of the many force multipliers. As on date, outer space is being extensively used by the armed forces for varied services which include navigation, intelligence, surveillance, reconnaissance, environmental monitoring and advance warning. The command and control in today's netcentric environment also depends on space resources. Thus, the use of outer space with spacebased assets in support of military operations leads to the deduction that space as a medium stands militarised. Of late, many of the dominant nations have developed, or are expanding, capabilities to attack the spacebased assets of potential adversaries to disrupt command and control structures. Countries like the US and China are contesting for space supremacy and working towards developing spacebased weapons capable of being delivered from spacebased platforms. These developments, in turn, are infusing a sense of insecurity amongst other international players, including India, and have raised concerns worldwide. Development of spacebased weapons by any state has the potential to ignite a new arms race in space as many countries now possess the wherewithal for launching spacebased assets capable of carrying the required payloads. Thus, from the present capability of 'militarisation of space', we seem to be graduating towards 'weaponisation of space'. As outer space has been designated as one of the 'global' commons, any sort of deployment or employment of space weapons raises concerns and any use of spacebased weapons will have unpleasant cascading effects. In the absence of any international curb or law on space weaponisation, it continues to be a conceptual possibility as well as an empirical reality.

OPTIMAL CONTROL OF PDES UNDER UNCERTAINTY

AN INTRODUCTION WITH APPLICATION TO OPTIMAL SHAPE DESIGN OF STRUCTURES

Springer This book provides a direct and comprehensive introduction to theoretical and numerical concepts in the emerging field of optimal control of partial differential equations (PDEs) under uncertainty. The main objective of the book is to offer graduate students and researchers a smooth transition from optimal control of deterministic PDEs to optimal control of random PDEs. Coverage includes uncertainty modelling in control problems, variational formulation of PDEs with random inputs, robust and risk-averse formulations of optimal control problems, existence theory and numerical resolution methods. The exposition focusses on the entire path, starting from uncertainty modelling and ending in the practical implementation of numerical schemes for the numerical approximation of the considered problems. To this end, a selected number of illustrative examples are analysed in detail throughout the book. Computer codes, written in MatLab, are provided for all these examples. This book is addressed to graduate students and researches in Engineering, Physics and Mathematics who are interested in optimal control and optimal design for random partial differential equations.

QUANTUM PHYSICS IS NOT WEIRD

IT IS HOW OUR CONSCIOUSNESS CREATES OUR REALITY. SECOND EDITION, REVISED AND ENLARGED.

Mijnbestseller.nl Quantum Physics shows us that we create what we observe. Countless experiments confirm that it is our information which manifests reality. Matter and time are created by our observation. This is not only true when we do experiments in laboratories, but it works the same way in everyday reality. We manifest our own experiences. Science does not prove that our consciousness must be a product of our material brain. On the contrary. Consciousness emerging from the brain is just a belief. This book tells the story how physics did develop from a quest to understand nature into its current highly myopic materialistic paradigm. The profound spiritual message of Quantum Physics is ignored, to our detriment. "A wonderful, very readable book that will convince thousands upon thousands of serious readers, including students of science, why consciousness is necessary to understand quantum physics and why materialist science is not adequate. I give the book my highest recommendation." -- Amit Goswami, PhD, author of The Self-Aware Universe. "A monumental book. A masterpiece in disguise" - Prof Emer dr. Dirk K.F Meijer, University of Groningen.
