The End of Ignorance

Multiplying Our Human Potential

Vintage Canada A revolutionary call for a new understanding of how people learn. The End of Ignorance conceives of a world in which no child is left behind – a world based on the assumption that each child has the potential to be successful in every subject. John Mighton argues that by recognizing the barriers that we have experienced in our own educational development, by identifying the moment that we became disenchanted with a certain subject and forever closed ourselves off to it, we will be able to eliminate these same barriers from standing in the way of our children. A passionate examination of our present education system, The End of Ignorance shows how we all can work together to reinvent the way that we are taught. John Mighton, the author of The Myth of Ability, is the founder of JUMP Math, a system of learning based on the fostering of emergent intelligence. The program has proved so successful an entire class of Grade 3 students, including so-called slow learners, scored over 90% on a Grade 6 math test. A group of

British children who had effectively been written off as too unruly responded so enthusiastically and had such impressive results using the JUMP method that the school board has adopted the program. Inspired by the work he has done with thousands of students, Mighton shows us why we must not underestimate how much ground can be covered one small step at a time, and challenges us to re-examine the assumptions underlying current educational theory. He pays attention to how kids pay attention, chronicles what captures their imaginations, and explains why their sense of self-confidence and ability to focus are as important to their academic success at school as the content of their lessons.

The Extended Mind

The Power of Thinking Outside the Brain

Eamon Dolan Books A bold new book reveals how we can tap the intelligence that exists beyond our brains--in our bodies, our surroundings, and our relationships Use your head. That's what we tell ourselves when facing a tricky problem or a difficult project. But a growing body of research indicates that we've got it exactly backwards. What we need to do, says acclaimed science writer Annie Murphy Paul, is think outside the brain. A host of "extra-neural" resources--the feelings and movements of our bodies, the physical spaces in which we learn and work, and the minds of those around us-- can help us focus more intently, comprehend more deeply, and create more imaginatively. The Extended Mind outlines the research behind this exciting new vision of human ability, exploring the findings of neuroscientists, cognitive scientists, psychologists, and examining the practices of educators, managers, and leaders who are already reaping the benefits of thinking outside the brain. She excavates the untold history of how artists, scientists, and authors--from Jackson Pollock to Jonas Salk to Robert Caro--have used mental extensions to solve problems, make discoveries, and create new works. In the tradition of Howard Gardner's Frames of Mind or Daniel Goleman's Emotional Intelligence, The Extended Mind offers a dramatic new view of how our minds work, full of practical advice on how we can all think better.

Dialogical Multiplication

Principles for an Indigenous Psychology

Springer Nature This book presents a theoretical framework developed to support psychologists working with indigenous people and interethnic communities. Departing from the cultural shock experienced as a psychologist working with indigenous people in Brazil, Dr. Danilo Silva Guimarães identifies the limits of traditional psychological knowledge to deal with populations who don't share the same ethos of the European societies who gave birth to psychology as a modern science and proposes a new approach to go beyond the epistemological project that aimed to construct a subject able to represent the world free from any cultural mediation. According to the author, the purpose of cultural psychology is to produce general psychological theories about the cultural mediation of the self, others and world relationships. Based on this assumption, he argues that to achieve this aim, cultural psychology needs to understand how indigenous perspectives participate in the process of knowledge construction, transforming psychological conceptions and practices. In this volume, the author presents his own contribution to open cultural psychology to indigenous perspectives by discussing the theoretical and practical implications of the notion of dialogical multiplication for the construction of work in co-authorship in the relation between psychology and indigenous peoples. With the growing migrations around the world, competences in psychological communication across cultures are more demanded each day, which makes Dialogical Multiplication - Principles for an Indigenous Psychology a critical resource for psychologists working with interethnic and intercultural communities around the world.

New Technologies and Human Rights

Challenges to Regulation

Routledge Whilst advances in biotechnology and information technology have undoubtedly resulted in better quality of life for mankind, they can also bring about global problems. The legal response to the challenges caused by the rapid progress of technological change has been slow and the question of how international human rights should be protected and promoted with respect to science and technology remains unexplored. The contributors to this book explore the political discourse and power relations of technological growth and human rights issues between the Global South and the Global North and uncover the different perspectives of both regions. They investigate the conflict between technology and human rights and the perpetuation of inequality and subjection of the South to the North. With emerging economies such as Brazil playing a major role in trade, investment and financial law, the book examines how human rights are affected in Southern countries and identifies significant challenges to reform in the areas of international law and policy.

After My Personal Stop Message

Trafford Publishing Life after having accepted the challenge to surrender the nightmare of addiction found the stage now set for the work of what I will call the first day of a new construction worker's position in the building process of a new empire. Such began the laying of the foundation for this new life with the acceptance now of the many changes and its process to be taken through in finally seeing and relishing the joy of a new life free of "yesterday". The work involved I hope can be felt in this second book as well as the joy felt with me in achieving the rewards making up the architecture of my new empire for life after all the hard worthless and cold nightmare of addiction. I do hope such is conveyed to those wanting to endure another story of success from the hardship of addiction so many encounter.

Work Without End

Abandoning Shorter Hours for the Right to Work

Temple University Press "An extraordinarily informative scholarly history of the debate over working hours from 1920 to 1940." --New York Times Book Review For more than a century preceding the Great Depression, work hours were steadily reduced. Intellectuals, labor leaders, politicians, and workers saw this reduction in work as authentic progress and the resulting increase in leisure time as a cultural advance. Benjamin Hunnicutt examines the period from 1920 to 1940 during which the shorter hour movement ended and the drive for economic expansion through increased work took over. He traces the political, intellectual, and social dialogues that changed the American concept of progress from dreams of more leisure in which to pursue the higher things in life to an obsession with the importance of work and wage-earning. During the 1920s with the development of advertising, the "gospel of consumption" began to replace the goal of leisure time with a list of things to buy. Business, which increasingly viewed shorter hours as a threat to economic

growth, persuaded the worker that more work brought more tangible rewards. The Great Depression shook the newly proclaimed gospel as well as everyone's faith in progress. Although work-sharing became a temporary solution to the shortage of jobs and massive unemployment, when faced with legislation that would limit the work week to thirty hours, Roosevelt and his New Deal advisors adopted the gospel of consumption's tests for progress and created more work by government action. The New Deal campaigned for the right to work a full time job--and won. "Work Without End presents a compelling history of the rise and fall of the 40-hour work week, explains how Americans became trapped in a prison of work that allows little room for family, hobbies or civic participation and suggests how they can free themselves from relentless overwork. [This book] is a sober reconsideration of a topic that is critical to America's future. It suggests that progress doesn't mean much if there is not time for love as well as work, and liberation is an empty achievement if the work it frees one to do is truly without end." --The Washington Post "Hunnicuttt, with this excellent book, becomes the first United States historian to examine fully why this momentous change occurred." --The Journal of American History "Hunnicuttt's achievement is to ask the questions, and to provide the first extended answer which takes in the full array of economic, social, and political forces behind the 'end of shorter hours' in the crucial first half of the twentieth century." --Journal of Economic History "This thoroughly documented history [is] a valuable book well worth reading." --Libertarian Labor Review "This is an important book in the emerging debate about alternatives to full employment. Hunnicutt is a skilled historian who is on to an important issue, writes well, and can bring many different kinds of historical sources to bear on the problem." --Fred Block, University of Pennsylvania "Work Without End is a disturbing but impressive indictment of both big business and the New Deal program of Franklin D. Roosevelt.... Hunnicutt presents an unusual but persuasive description of a successful conspiracy to deprive American workers of their vision of a shorter-hours work week and the individual and societal liberation which would flow from it." --Labor Studies Journal

The Joy of the Gospel

Evangelii Gaudium

Image The perfect gift! A specially priced, beautifully designed hardcover edition of The Joy of the Gospel with a foreword by Robert Barron and an afterword by James Martin, SJ. “The joy of the gospel fills the hearts and lives of all who encounter Jesus... In this Exhortation I wish to encourage the Christian faithful to embark upon a new chapter of evangelization marked by this joy, while pointing out new paths for the Church’s journey in years to come.” – Pope Francis This special edition of Pope Francis's popular message of hope explores themes that are important for believers in the 21st century. Examining the many obstacles to faith and what can be done to overcome those hurdles, he emphasizes the importance of service to God and all his creation. Advocating for “the homeless, the addicted, refugees, indigenous peoples, the elderly who are increasingly isolated and abandoned,” the Holy Father shows us how to respond to poverty and current economic challenges that affect us locally and globally. Ultimately, Pope Francis demonstrates how to develop a more personal relationship with Jesus Christ, “to recognize the traces of God’s Spirit in events great and small.” Profound in its insight, yet warm and accessible in its tone, The Joy of the Gospel is a call to action to live a life motivated by divine love and, in turn, to experience heaven on earth. Includes a foreword by Robert Barron, author of Catholicism: A Journey to the Heart of the Faith and James Martin, SJ, author of Jesus: A Pilgrimage

The Myth of Ability

Nurturing Mathematical Talent in Every Child

Bloomsbury Publishing USA For decades teachers and parents have accepted the judgment that some students just aren't good at math. John Mighton-the founder of a revolutionary math program designed to help failing math students-feels that not only is this wrong, but that it has become a self-fulfilling prophecy. A pioneering educator, Mighton realized several years ago that children were

failing math because they had come to believe they were not good at it. Once students lost confidence in their math skills and fell behind, it was very difficult for them to catch up, particularly in the classroom. He knew this from experience, because he had once failed math himself. Using the premise that anyone can learn math and anyone can teach it, Mighton's unique teaching method isolates and describes concepts so clearly that students of all skill levels can understand them. Rather than fearing failure, students learn from and build on their own successes and gain the confidence and self-esteem they need to be inspired to learn. Mighton's methods, set forth in The Myth of Ability and implemented in hundreds of Canadian schools, have had astonishing results: Not only have they helped children overcome their fear of math, but the resulting confidence has led to improved reading and motor skills as well. The Myth of Ability will transform the way teachers and parents look at the teaching of mathematics and, by extension, the entire process of education.

Psychology in the Indian Tradition

Springer This authoritative volume, written by two well-known psychologist-philosophers, presents a model of the person and its implications for psychological theory and practice. Professors Ramakrishna Rao and Anand Paranjpe draw the contours of Indian psychology, describe the methods of study, explain crucial concepts, and discuss the central ideas and their application, illustrating them with insightful case studies and judicious reviews of available research data and existing scholarly literature. The main theme is organized around the thesis that psychology is the study of the person and that the person is a unique composite of body, mind and consciousness. The goal of the person is self-realization. Self-realization consists in the realization of one's true self as distinct from the manifest ego and it is facilitated by cultivating consciousness. Cultivating consciousness leads to a kind of psycho-spiritual symbiosis resulting in personal transformation, altruistic value orientation and flowering of the hidden human potential.

Created for Purpose

Whitaker House You are no accident. Your presence on this earth is not a mistake. Neither is it insignificant. On the contrary, you are wanted here—and needed! You are a creation of God with a unique purpose. Many people “do” things to try to gain acceptance by others, so that they can “be” someone. They become slaves to public opinion and never really know who they were meant to be. When we know that we are God’s beloved children, chosen from the foundation of the world, and discover who He designed us to be, we will think and act from that perspective. Everything else will develop from our identity and existence in Him. That identity goes beyond even our personal purpose to God’s eternal plans for the world and our exciting role in them. God created all human beings to have dominion over the earth. And He has assigned each of us a portion of “territory” where we can exercise the measure of our dominion on earth. This dominion is based on the faith, anointing, and gifts He has given us. Our words and actions are most effective when we are in the territory God has assigned to us and are seeking first His kingdom. This “territorial” power is not merely symbolic. It is a reality in which we must live. The territory in which we are to be fruitful is not random or general but specific. In Created for Purpose, you will discover God’s plan for your life as a loved and valuable member of His creation, what it means to be called by God, and how to know and live in your purpose throughout your life. You are not an accident. You are present on this earth for a significant reason. Find out who you were meant to be!

DIAMOND IN THE HILLS

A BIOGRAPHY OF SADGURU SRI SRI ARJUN

Notion Press This is a real story of a school dropout tribal youth named Arjun who was professionally a carpenter working for Hindustan Aeronautics Limited, a struggling householder far from sophistication of city life, but who, capitalising on his intrinsic inquisitiveness and divine virtues single-mindedly journeyed through the science route to the peak of spiritual realization, to become a spiritual master (Sadguru) at an early age of just 34 and revealed 'Divya Darshan or The Philosophy Divine' for the whole of humanity irrespective of caste, creed or religiosity. 'Divya Darshan, The Philosophy Divine', presents, for the self-benefit of mankind, the true knowledge based on non-dualistic principles in a simple style by which man can arouse the inert power within, blossom the latent divine virtues while observing the Law of Eternity for taking care of not only his own existence but ensuring happy and peaceful social living ultimately to get rid of the ignorance-generated sins and sufferings. "Ignorance is the cause of sufferings. Dispel ignorance by enkindling knowledge within and get rid of all sufferings. You alone can liberate yourself by acquiring true knowledge and divine virtues. Regain your lost paradise and enjoy peace and bliss. Remember; you are immortal and ever-free."
