The Double Auction Market Institutions, Theories, And Evidence Routledge This collection of papers focuses on markets organized as double auctions (DA). In a double auction, both buyers and sellers can actively present bids (offers to buy) and asks (offers to sell) for standardized units of well-defined commodities and securities. A classic example of a DA market (known by practitioners as an open outcry market) is the commodity trading pit at the Chicago Board of Trade. A related process is a call market, which is used to determine opening prices on the New York Stock Exchange. Already the predominant trading institution for financial and commodities markets, the double auction has many variants and is evolving rapidly in the present era of advancing computer technology and regulatory reform. DA markets are of theoretical as well as practical interest in view of the central role these institutions play in allocating resources. Although the DA has been studied intensively in the laboratory, and practitioners have considerable experience in the field, only recently have tools started to become available to provide the underpinning of a behavioural theory of DA markets. Economic Methodology A Historical Introduction Routledge Ever since the inception of economics over two hundred years ago, the tools at the discipline's disposal have grown more and more more sophisticated. This book provides a historical introduction to the methodology of economics through the eyes of economists. The story begins with John Stuart Mill's seminal essay from 1836 on the definition and method of political economy, which is then followed by an examination of how the actual practices of economists changed over time to such an extent that they not only altered their methods of enquiry, but also their self-perception as economists. Beginning as intellectuals and journalists operating to a large extent in the public sphere, they then transformed into experts who developed their tools of research increasingly behind the scenes. No longer did they try to influence policy agendas through public discourse; rather they targeted policymakers directly and with instruments that showed them as independent and objective policy advisors, the tools of the trade changing all the while. In order to shed light on this evolution of economic methodology, this book takes carefully selected snapshots from the discipline's history. It tracks the process of development through the nineteenth and twentieth centuries, analysing the growth of empirical and mathematical modelling. It also looks at the emergence of the experiment in economics, in addition to the similarities and differences between modelling and experimentation. This book will be relevant reading for students and academics in the fields of

economic methodology, history of economics, and history and philosophy of the social sciences. Justification, Evaluation and Critique in the Study of Organizations Contributions from French Pragmatist Sociology Emerald Group Publishing This volume explores how mobilizing Boltanski and Thévenot's economies of worth framework, and its associated concepts of justification, evaluation and critique, help address questions regarding the premises and dynamics of coordinated action, both within and across organizations, and by so doing help advance our understanding.
