Vocational Education in a Democracy

Technology and Vocational Education for Sustainable Development

Empowering Individuals for the Future

Springer Science & Business Media Empowerment is the overarching idea used in this book. The term has a variety of meanings in different sociocultural and political contexts, including “self-strength, control, self-power, self-reliance, own choice, life of dignity in accordance with one’s values, capable of fighting for one’s rights, independence, own decision making, being free, awakening, and capability” (The World Bank, 2002, p. 10). However, the World Bank report observed that most definitions focus on issues of “gaining power and control over decisions and resources that determine the quality of one’s life” (p. 10). This interpretation of empowerment provides a useful starting point for the development of the series of interconnected arguments explored here. Establishment of the basis for understanding, identifying and developing strategies through education necessary for individuals to be able to make choices that influence the quality of their lives is the main aim of this book. There are a number of assumptions and boundaries that frame this analysis. First, the book focuses on “agents”; however, empowerment is often conceptualised in terms of relationships between agency and structure (e. g. , Alsop, Bertelsen, & H- land, 2006). Agency could be defined as “an actor’s or group’s ability to make purposeful choices - that is, the actor is able to envisage and purposively choose options” (p. 11).

Ideology, Curriculum, and the New Sociology of Education

Revisiting the Work of Michael Apple

Routledge For more than three decades Michael Apple has sought to uncover and articulate the connections among knowledge, teaching and power in education. Beginning with *Ideology and Curriculum* (1979), Apple moved to understand the relationship between and among the economy, political and cultural power in society on the one hand "and the ways in which education is thought about, organized and evaluated" on the other. This edited collection invites several of the world's leading education scholars to reflect on the relationships between education and power and the continued impact of Apple's scholarship. Like Apple's work itself, the essays will span a range of disciplines and inequalities; emancipatory educational practices; and the linkage between the economy and race, class and gender formation in relation to schools.

Intelligence Reframed

Multiple Intelligences for the 21st Century

Basic Books Harvard psychologist Howard Gardner has been acclaimed as the most influential educational theorist since John Dewey. His ideas about intelligence and creativity - explicated in such bestselling books as *Frames of Mind* and *Multiple Intelligences* (over 200,000 copies in print combined) - have revolutionized our thinking. In his groundbreaking 1983 book *Frames of Mind*, Howard Gardner first introduced the theory of multiple intelligences, which posits that intelligence is more than a single property of the human mind. That theory has become widely accepted as one of the seminal ideas of the twentieth century and continues to attract attention all over the world. Now in *Intelligence Reframed*, Gardner provides a much-needed report on the theory, its evolution and revisions. He offers practical guidance on the educational uses of the theory and responds to the critiques leveled against him. He also introduces two new intelligences (existential intelligence and naturalist intelligence) and argues that the concept of intelligence should be broadened, but not so absurdly that it includes every human virtue and value. Ultimately, argues Gardner, possessing a basic set of seven or eight intelligences is not only a unique trademark of the human species, but also perhaps even a working definition of the species. Gardner also offers provocative ideas about creativity, leadership, and moral excellence, and speculates about the relationship between multiple intelligences and the world of work in the future.

Drawing

A Creative Process

Wiley "Drawing relies on a clear vision. It also requires thought which, in, turn, builds understanding. Drawing cannot be detached from seeing and thinking about the fundamental nature of the subject matter being represented. The knowledge and understanding gained through drawing from life directly enhances our ability to draw from the imagination. Just as thought can be put into words, ideas can be made visible in a drawing to promote visual thinking and further stimulate the imagination. Once what is seen or imagined is made visible in a drawing, the image takes on a life of its own and communicates graphically. However eloquently or crudely, all drawings, speak to the eye." From the Preface . Francis D.K. Ching
